APOLLO 14 MISSION DESCRIPTION

1. Manned: Prime Crew Back-up Crew
Alan B. Shepard (CDR) Eugene A. Cernan (CDR)
Stuart A. Roosa (CMP) Ronald E. Evans (CMP)
Edgar D. Mitchell (LMP) Joe Henry Engle (LMP)
2. Seventh Manned Saturn V Mission
3. Fourth Lunar Landing Mission
4. Planned Duration of Apollo 14 - 216 hours 41 minutes
5. Booster - Saturn V Booster # 509
6. Spacecraft - CSM # 110 and LM # 8
7. Block II G & N System # 214 - LM G & N System # 611

The Apollo 14 Mission will be approximately 9 days duration. Lunar surface activities will be conducted up to 34 hours and will include (2) two EVA periods for surface exploration and experiment deployment. The primary objectives of this mission include the following:

1. Provide a contingency sample for postflight scientific investigation.
2. Deploy ALSEP consistent with a seismic net.
3. Collect geologic core tube soil samples from the lunar subsurface.
4. Develop man's capability to work in the lunar environment.

LM GUIDANCE and NAVIGATION EQUIPMENT.....

CM GUIDANCE, NAVIGATION and CONTROL SYSTEM

THE APOLLO GUIDANCE AND NAVIGATION SYSTEM IS COMPOSED OF THREE BASIC SUBSYSTEMS: INERTIAL, OPTICAL AND COMPUTER.

1. The inertial guidance subsystem is composed of inertial measurement unit (IMU) and associated equipment. This subsystem performs three major functions: (A) Measures changes in spacecraft attitude; (B) Measures spacecraft velocity due to thrust; and (C) Assists in generating steering signals.
2. The optical navigation subsystem is composed of a space sextant and a scanning telescope. Sightings on celestial bodies and landmarks on the moon and earth are used by the computer subsystem to determine the spacecraft's position and velocity and to align the inertial reference within the IMU.
3. The command module computer (CMC) provides five major functions: (A) Calculates steering signals and engine discretes necessary to keep the spacecraft on the required trajectory; (B) Positions the stable member in the IMU to a coordinate system defined by precise optical measurements; (C) Positions the optical unit to celestial objects; (D) Conducts limited malfunction isolation of the G&N system by monitoring the level and rate of system signals; and (E) Supplies pertinent spacecraft condition information to the display and control panel.

INERTIAL MEASUREMENT UNIT (IMU) and associated equipment performs three major functions; (A) Measures changes in LM attitude, (B) Assists in generating steering commands, and (C) Measures LM velocity changes due to thrust.

ALIGNMENT OPTICAL TELESCOPE (AOT) - Provides star sighting data which is manually inserted into the LM Guidance Computer for establishing the inertial reference.

NAVIGATION BASE (NAV BASE) - Provides an accurate mounting base for the Alignment Optical Telescope (AOT) and the Inertial Measurement Unit.

LM GUIDANCE COMPUTER (LGC) - Performs four major functions: (A) Calculates steering signals and engine discretes necessary to keep the LM on the required trajectory, (B) Positions the stable member in the IMU to a coordinate system defined by precise optical measurements, (C) Conducts limited malfunction isolation of the PGNCS by monitoring the level and rate of system signals and (D) Supplies pertinent LM condition information to the display and control panels.

DISPLAY AND KEYBOARD (DSKY) - Provides a two-way communication link between the operator and the LGC and the following functions may be performed: (A) Loading of data into the LGC and (B) Display of data and system configuration to the operator.

COUPLING DATA UNIT (CDU) - The CDU, an all-electronic device, is used as an interface element between the following: (A) The inertial subsystem and computer subsystem and (B) The computer subsystem and the controls. This unit functions primarily as an analog to digital or digital to analog converter.
