Recommended schedule

Day 1
Classroom session: *Informational interviews, job searching – attendance is mandatory!*
Independent activity: *Contact employer(s) to set up informational interview(s)*
Independent activity: *Work on homework questions – 1 through 11 (includes informational interview assignment)*
Independent activity: *Complete and submit a “Degree Application” form with the BTC registration office so that you will be awarded a degree upon completion of all required coursework*

This is the major assignment for this course: conducting an *informational interview* of an employer, targeted to instrumentation-related work. A recommended resource for you is the tutorial *So You Want To Be An Instrument Technician?* available from your instructor as a free electronic book. Using this or any other reference on informational interviewing, your major task is to interview a representative of some employer who hires technicians and submit the notes from that interview to your instructor by Day 5. Questions 1 through 11 in this worksheet are homework questions for you to complete, also due by Day 5 of this course (unless you have completed a jobshadow or internship during this course or during the break immediately prior).

Do not be surprised if an employer does not answer your query for an informational interview. It is recommended that you contact multiple employers in order to ensure successful completion of this exercise, and that you interview all who agree to your request. Informational interviews do not take long to conduct, and they have been known to lead to job offers!

Day 2
Independent activity: *Work on homework questions – 1 through 11 (includes informational interview assignment)*

Day 3
Independent activity: *Work on homework questions – 1 through 11 (includes informational interview assignment)*

Day 4
Independent activity: *Finish all homework questions – 1 through 11 (includes informational interview assignment)*

Day 5
**Homework due at the end of the day (questions 1 through 11, includes informational interview assignment)**

Note: Successfully completing a “jobshadow” experience either during the week this course is scheduled or during the school break immediately preceding this course counts as equivalent credit for all course assignments including the informational interview as well as attendance at the classroom session. Your instructor will need proof of your jobshadow completion, so be sure to leave a contact phone number and/or email for the jobshadow employer that your instructor may use for this purpose.

**IMPORTANT NOTES!**

This course is largely self-directed, with little formal instruction given. It is imperative that you attend the classroom session and also complete all the prescribed activities by the end of the school day on Day
5. Anyone absent from the classroom session (unless due to a jobshadow or an emergency situation) will be dropped from the course as a no-show. Completing the informational interview in particular will likely require more time than you think, so start early! Barring some personal (documented) emergency preventing your timely submission of assignments, any late work will result in a failing grade for the course! The work you must submit by Day 5 is listed in **bold** print above.

While completing a jobshadow or internship during this course or during the prior school break does count as equivalent credit for all course assignments, it does **not** substitute for registration and payment for the course. No grade may be submitted for you unless and until you are registered.

Of these, the one most often responsible for students’ failure of the course is the informational interview, because companies may not be able to provide you with an interview opportunity in a timely manner. *Work on getting the informational interview done as soon as possible!* Contact multiple employers to ensure success.
Program Outcomes for Instrumentation and Control Technology (BTC)

#1 Communication
Communicate and express concepts and ideas across a variety of media (verbal, written, graphical) using industry-standard terms.

#2 Time management
Arrives on time and prepared to work; Budgets time and meets deadlines when performing tasks and projects.

#3 Safety
Complies with national, state, local, and college safety regulations when designing and performing work on systems.

#4 Analysis and Diagnosis
Analyze, evaluate, and diagnose systems related to instrumentation and control including electrical and electronic circuits, fluid power and signaling systems, computer networks, and mechanisms; Select and apply correct mathematical techniques to these analytical and diagnostic problems; Select and correctly use appropriate test equipment to collect data.

#5 Design and Commissioning
Select, design, construct, configure, and install components necessary for the proper function of systems related to instrumentation and control, applying industry standards and verifying correct system operation when complete.

#6 System optimization
Improve technical system functions by collecting data and evaluating performance; Implement strategies to optimize the function of these systems.

#7 Calibration
Assess instrument accuracy and correct inaccuracies using appropriate calibration procedures and test equipment; Select and apply correct mathematical techniques to these calibration tasks.

#8 Documentation
Interpret and create technical documents (e.g. electronic schematics, loop diagrams, functional diagrams, P&IDs, graphs, narratives) according to industry standards.

#9 Independent learning
Select and research information sources to learn new principles, technologies, and techniques.

#10 Job searching
Develop a professional resume and research job openings in the field of industrial instrumentation.
Each and every outcome in this course is assessed at a *mastery* level (i.e. 100% competence)

- Research and document multiple employers of instrument technicians. Note: successfully completing a “jobshadow” or “internship” experience either during the week this course is scheduled or during the break immediately preceding this quarter counts as equivalent credit for the employer research assignment. [Ref: Program Learning Outcome #10]

- Interview a representative of a company hiring instrument technicians, either in-person or over the telephone, documenting the conversation to record the informational interview. If conducted over telephone, the employer must be outside of the Whatcom and Skagit County areas. Note: successfully completing a “jobshadow” or “internship” experience either during the week this course is scheduled or during the break immediately preceding this quarter counts as equivalent credit for the informational interview assignment. [Ref: Program Learning Outcome #10]
Sequence of second-year Instrumentation courses

Core Electronics -- 3 qtrs
including MATH 141 (Precalculus 1)

(Only if 4th quarter was Summer: INST25x)

Prerequisite for all INST24x, INST25x, and INST26x courses

INST 200 -- 1 wk
Intro. to Instrumentation

Offered 1st week of Fall, Winter, and Spring quarters

INST 205 -- 1 cr
Job Prep I

Offered 1st week of Fall, Winter, and Spring quarters

INST 206 -- 1 cr
Job Prep II

Prerequisite for INST206

All courses completed?

Yes

Graduate!!!

No

INST 233 -- 4 cr
Protective Relays (elective)

Summer quarter

INST 240 -- 6 cr
Pressure/Level Measurement

OPER 241 -- 6 cr
Temp./Flow Measurement

INST 242 -- 5 cr
Analytical Measurement

Jobshadow and/or Internship strongly recommended

INST 250 -- 5 cr
Final Control Elements

INST 251 -- 5 cr
PID Control

INST 252 -- 4 cr
Loop Tuning

INST 250, and INST26x courses

Prerequisite for all INST24x,
Fall, Winter, and Spring quarters

INST 260 -- 4 cr
Data Acquisition Systems

INST 262 -- 5 cr
Digital Control Systems

INST 263 -- 5 cr
Control Strategies

ENGT 134 -- 5 cr
CAD 1: Basics

Summer quarter

Fall quarter

Winter quarter

Spring quarter

CAD 1: Basics
including MATH 141 (Precalculus 1)

Core Electronics

INST 200, and INST25x, and INST26x courses

Prerequisite for INST24x,
Fall, Winter, and Spring quarters

All courses completed?

Yes

Graduate!!!

No

INST 205 -- 1 cr
Job Prep I

Offered 1st week of Fall, Winter, and Spring quarters

INST 206 -- 1 cr
Job Prep II

Prerequisite for INST206

All courses completed?

Yes

Graduate!!!

No
The particular sequence of courses you take during the second year depends on when you complete all first-year courses and enter the second year. Since students enter the second year of Instrumentation at four different times (beginnings of Summer, Fall, Winter, and Spring quarters), the particular course sequence for any student will likely be different from the course sequence of classmates.

Some second-year courses are only offered in particular quarters with those quarters not having to be in sequence, while others are offered three out of the four quarters and must be taken in sequence. The following layout shows four typical course sequences for second-year Instrumentation students, depending on when they first enter the second year of the program:

**Possible course schedules depending on date of entry into 2nd year**

- **Beginning in Summer**
  - **Summer quarter**: INST 233 -- 4 cr
    - Protective Relays (elective)
  - **Fall quarter**: INST 200 -- 1 wk
    - Intro to Instrumentation
    - INST 240 -- 6 cr
      - Pressure/Level Measurement
    - INST 241 -- 6 cr
      - Temp./Flow Measurement
    - INST 242 -- 5 cr
      - Analytical Measurement
  - **Winter quarter**: INST 205 -- 1 cr
    - Job Prep I
  - **Spring quarter**: INST 250 -- 5 cr
    - Final Control Elements
  - **Graduation!**

- **Beginning in Fall**
  - **Summer quarter**: INST 233 -- 4 cr
    - Protective Relays (elective)
  - **Fall quarter**: INST 200 -- 1 wk
    - Intro to Instrumentation
    - INST 240 -- 6 cr
      - Pressure/Level Measurement
    - INST 241 -- 6 cr
      - Temp./Flow Measurement
    - INST 242 -- 5 cr
      - Analytical Measurement
  - **Winter quarter**: INST 205 -- 1 cr
    - Job Prep I
  - **Spring quarter**: INST 250 -- 5 cr
    - Final Control Elements
  - **Graduation!**

- **Beginning in Winter**
  - **Winter quarter**: INST 200 -- 1 wk
    - Intro to Instrumentation
    - INST 240 -- 6 cr
      - Pressure/Level Measurement
    - INST 241 -- 6 cr
      - Temp./Flow Measurement
    - INST 242 -- 5 cr
      - Analytical Measurement
  - **Spring quarter**: INST 205 -- 1 cr
    - Job Prep I
  - **Summer quarter**: INST 233 -- 4 cr
    - Protective Relays (elective)
  - **Graduation!**

- **Beginning in Spring**
  - **Spring quarter**: INST 200 -- 1 wk
    - Intro to Instrumentation
    - INST 240 -- 6 cr
      - Pressure/Level Measurement
    - INST 241 -- 6 cr
      - Temp./Flow Measurement
    - INST 242 -- 4 cr
      - Loop Tuning
  - **Winter quarter**: INST 205 -- 1 cr
    - Job Prep I
  - **Summer quarter**: INST 233 -- 4 cr
    - Protective Relays (elective)
  - **Graduation!**

Jobshadow and/or Internship strongly recommended
This worksheet is licensed under the Creative Commons Attribution 4.0 International Public License. To view a copy of this license, visit http://creativecommons.org/licenses/by/4.0/ or send a letter to Creative Commons, 171 Second Street, Suite 300, San Francisco, California 94105, USA. The terms and conditions of this license allow for free copying, distribution, and/or modification of all licensed works by the general public.

Simple explanation of Attribution License:

The licensor (Tony Kuphaldt) permits others to copy, distribute, display, and otherwise use this work. In return, licensees must give the original author(s) credit. For the full license text, please visit http://creativecommons.org/licenses/by/4.0/ on the internet.

More detailed explanation of Attribution License:

Under the terms and conditions of the Creative Commons Attribution License, you may make freely use, make copies, and even modify these worksheets (and the individual “source” files comprising them) without having to ask me (the author and licensor) for permission. The one thing you must do is properly credit my original authorship. Basically, this protects my efforts against plagiarism without hindering the end-user as would normally be the case under full copyright protection. This gives educators a great deal of freedom in how they might adapt my learning materials to their unique needs, removing all financial and legal barriers which would normally hinder if not prevent creative use.

Nothing in the License prohibits the sale of original or adapted materials by others. You are free to copy what I have created, modify them if you please (or not), and then sell them at any price. Once again, the only catch is that you must give proper credit to myself as the original author and licensor. Given that these worksheets will be continually made available on the internet for free download, though, few people will pay for what you are selling unless you have somehow added value.

Nothing in the License prohibits the application of a more restrictive license (or no license at all) to derivative works. This means you can add your own content to that which I have made, and then exercise full copyright restriction over the new (derivative) work, choosing not to release your additions under the same free and open terms. An example of where you might wish to do this is if you are a teacher who desires to add a detailed “answer key” for your own benefit but not to make this answer key available to anyone else (e.g. students).

Note: the text on this page is not a license. It is simply a handy reference for understanding the Legal Code (the full license) - it is a human-readable expression of some of its key terms. Think of it as the user-friendly interface to the Legal Code beneath. This simple explanation itself has no legal value, and its contents do not appear in the actual license.
Question 1

List at least five appropriate informational interview questions:

- 
- 
- 
- 
- 

A resource you may find helpful for crafting informational interview questions is the open-source guide entitled *So You Want To Be An Instrument Technician?* available on the Socratic Instrumentation website ([http://ibiblio.org/kuphaldt/socratic/sinst](http://ibiblio.org/kuphaldt/socratic/sinst)).

Question 2

When attempting to contact potential employers, you will usually encounter automated telephone answering systems where you must leave a message for someone to listen to later. One problem with voicemail messages is that they tend to sound unprofessional: vocalized pauses (“um”), meandering sentences, and missing information may leave a bad “first impression” with the person you are trying to contact.

One helpful way to overcome this is to have a pre-written paragraph ready to read aloud when leaving a voicemail message. This will help you overcome anxiety when faced with having to leave a voicemail message (“What do I say?”), shorten the message by eliminating wasted time, and ensure no critical information is forgotten.

Write your own introductory paragraph for the purpose of leaving voicemail messages with prospective employers. Be sure to include the following points:

- Your name, and how (and when!) you may be reached (e.g. phone number)
- The purpose of contacting this company (to explore career options there)
- (Optional) a statement describing your interest in this company
- Conclude with a repeat of your contact information (e.g. phone number)
- A friendly sign-off (e.g. “Have a nice day”)
Question 3

Read this fictitious account of an Instrumentation graduate who accepts a position with a company, then decides to leave very soon after:

Gary graduates from the Instrumentation program of a two-year college, and immediately takes a factory maintenance position with Widgets, Inc. During the interview, Gary is told that this job entails much more than just instrumentation work: Gary will have to perform janitorial duties, light carpentry, and clean windows in addition to performing maintenance on the automation systems at this facility. Gary has all these skills, and is eager to get started in his new career, so he accepts.

After working a few months at Widgets, Inc., Gary realizes that instrumentation is a very small part of the job. Most of his time spent working there is occupied with janitorial, carpentry, and window cleaning. In those months, Gary has only had opportunity to use his instrumentation skills once or twice. This is not what he expected when he took the job.

While looking through the local newspaper, Gary sees an opening for an instrument technician at a company where he knows the technicians do far more “traditional” instrumentation-type work. He decides to apply for this other job, and eventually gets it. When he gives two weeks notice to his boss at Widgets, Inc., his boss is quite upset. Now his boss must put out another posting for a maintenance technician, and incur all the costs of interviewing again.

Explain how Gary could have avoided this unfortunate situation, and also identify some of the far-reaching consequences of his decision to leave Widgets, Inc. after just a few months. Hint: the general rule of staying with your first employer for one to two years minimum may be helpful to you in brainstorming consequences, and also in determining how this situation could have been avoided.
Question 4

The most important assignment for this course is to conduct an informational interview of an employer hiring instrument technicians (or some closely related craft such as industrial electrician, electronic communications technician, etc.). The purpose of this assignment is to practice making first contact with employers as a practical job-searching strategy, and to learn more about your chosen profession.

Electronic interviews (e.g. telephone, video conference, etc.) are acceptable only for employers located outside of Whatcom or Skagit counties. Please use a land-line telephone for this rather than a mobile phone, as the poor voice quality of most cell phone connections is viewed as unprofessional. For an employer within Whatcom or Skagit county, only an in-person interview will be accepted, and a business card from the person interviewed must accompany your interview results for course credit.

You should do some basic research on the company prior to contacting anyone there for an informational interview. It is considered unprofessional to ask questions in an informational interview that may be easily answered from the company’s website or other publicly-available sources. Remember that the person you are interviewing has a job to do, and would rather not have you waste their time.

People appropriate to contact when scheduling an informational interview include front-desk receptionists, Human Resources personnel, instrument technicians, and instrument shop supervisors (in that preferential order). Shop-level personnel generally do not take kindly to strangers’ queries, but receptionists and HR personnel are much more accustomed to working with the general public.

If you intend on conducting an in-person informational interview, please be sure to dress and behave appropriately: treat it as if you are being interviewed for a job! Bear in mind that this informational interview may very well open a door for your employment at this company, so treat it with the sense of importance it deserves!

Document the questions you asked during your informational interview and the responses received:

•

•

•

•

•

file i02160
Question 5

Suppose you are working on the job, and you are the first to encounter a person who has been seriously injured. The person in question is clearly in need of help, and no one else is there besides you.

What is the very first thing you should do in this event, before giving any direct aid to the injured person? Note: the answer here is exactly the same for non-industrial emergencies!

file i01862

Question 6

Under what conditions is it advisable to wear hearing protection? What are some of the different types of hearing protection available to industrial workers? Describe what cumulative hearing loss is.

file i01864

Question 7

Linemen working on high-voltage conductors do not simply rely on open disconnect switches to isolate sections of power lines from sources of electricity during maintenance. They also attach “grounding” cables from line to line, and then to earth ground like this:

![Diagram of grounding】

Explain why this decreases the risk of electric shock for the linemen, based on what you know about electrically common points in a circuit.

file i01860

Question 8

A common concern in industrial maintenance work is confined spaces. Research the definition of a “confined space” and explain the precautions typically taken before any worker enters a confined space.

file i01866
Question 9

When “locking out” a complex piece of equipment or machinery for maintenance work, a large number of different energy-flow devices (e.g. circuit breakers, block valves, bleed valves) must be secured in their safe positions by multiple workers. If each worker were to place their own personal padlock on each of these devices, the total number of locks required would be staggering.

A more efficient system for managing this is to use a sheet-metal box containing a numbered padlock (with matching key) for each energy-flow device to be secured on the equipment, as well as a list identifying which lock goes on which energy-flow device. The lid of this device is then lock-able with a multi-lock device, permitting multiple peoples’ personal locks to be applied so the lid cannot be opened unless all personal locks are removed from it:

![Multi-lock device](image)

Explain how having numbered padlocks stored inside this lock-box prior to a job, and by having workers apply their personal padlocks to secure the lid of this lock-box, help to ensure the equipment will be safe for everyone to work on.

Also, identify any way(s) this safety system could fail, thereby placing people in danger.

---

Question 10

Cardio-pulmonary resuscitation, or CPR, is a very important procedure to know for certain types of emergencies. Identify what “CPR” is, what it is used for, and what situations require it.

---
Question 11

In order for BTC to award you a degree, you must complete the online Graduation Application form. Without this form completed, you will not be awarded your degree even if all required courses have been successfully passed!

Complete this online form, and provide proof of completion by attaching a screenshot of the completed form in your homework as a response to this question.

file i01296
Here is a sample voicemail message I made in April of 2007 for contacting multiple oil refineries in California (on behalf of students):

Hello. My name is Tony Kuphaldt, and I’m an instructor of Instrumentation and Control Technology at Bellingham Technical College in Washington state. My telephone number is 360-752-8477. I have a class of 19 students ready to graduate this June with their two-year Associates degree in Instrumentation, and some of them are specifically looking to move to California. I’m interested in exploring job opportunities with your company, for the benefit of these students. We have placed graduates in Instrument/Electrical positions at other oil refineries in California, including BP in Carson (near LA), and Tesoro in Martinez (Bay Area). I believe these students’ skill set would be valuable to your operation, and I would like to see if this year’s graduates could fulfill some of your technical staffing needs.

Again, my telephone number is 360-752-8477. Please feel free to contact me about any open positions you may have at the moment, or that you predict you may have later in the year. I look forward to discussing possibilities with you. Thank you very much!
Answer 10

I'll let you research the answers to this question!

Answer 11

You may use Snipping Tool in Microsoft Windows to capture a screenshot and save it as a graphic image file.

Alternatively, pressing the Print Screen button on any computer keyboard saves an image of the screen’s contents, where it may be “pasted” into any program accepting graphic images.
