HEROES OF BIR HACHEIM. Of a surety the true France is expressed in the smiling and confident bearing of these two Free French warriors who fought most valiantly in the defence of Bir Hacheim. The Free French brigade under General Koenig held out for sixteen days. They destroyed about 70 Axis tanks, inflicted severe losses in men and material on the German and Italian forces, and in night raids liberated a number of our own men who had been taken prisoner. The garrison of Bir Hacheim was withdrawn on June 19.

ALONG THE BATTLE FRONTS

The fortnight ending June 22 was full of tense situations—for our Army perhaps the most tense since the days of Dunkirk—although, of course, less crucial. There is no denying that in Libya we suffered a severe and disconcerting reverse, and did not escape serious disaster.

On the whole, however, the tide of war continued to flow in favour of the Allies. In Russia, Sebastopol maintained its magnificent resistance to desperate attempts to storm the fortress; and a renewed effort by Von Bock to eliminate Timoshenko’s menacing salient south of Kharkov failed after incurring heavy losses.

In the Pacific, although the Japanese secured a foothold in the Aetesian Islands, they paid a heavy price, having admittedly suffered naval losses comparable to those incurred at Midway Island. These, added to those of the Coral Sea and Midway Island, have completely changed the balance of sea power in the Pacific. Japan’s losses of aircraft-carriers, her most formidable weapon, have been particularly severe; while American losses in all classes of ships have been comparatively light. Even in Libya, where we have to admit a disaster; Rommel had only partly achieved his main object—the destruction of Ritchie’s Army—and had not yet become a serious menace to Egypt.

LIBYA

With his usual promptitude, Rommel, after our withdrawal from Bir Hacheim, made use of his recovered liberty of movement to revert to his original plan, which aimed at cutting off Ritchie’s troops at Gazala and blocking their line of retreat to Tobruk.

Striking east with a strong Panzer force and motorized infantry, he attempted to rush Ritchie’s wheeled south; but was driven off by the garrison and our armoured forces. Wheeling north, he attempted to reach the coast road west of Tobruk, using the whole of his armoured strength. Heavy fighting occurred round the defensive "boxes" of Knightsbridge and Acroma, and for a time it seemed that the situation would turn decisively in our favour. For it was a risky move; Ritchie’s army was well under his hand, and his armoured troops and air force made it difficult for Rommel to maintain his ammunition and petrol supplies.

Then on Saturday, June 15, occurred one of those incidents which in a battle of manoeuvre may in a few minutes change the whole aspect. Whether as a protective measure or as an intentional trap Rommel, or one of his subordinate commanders, had concentrated a number of heavy anti-tank guns in a well-concealed position at Bir Behaaffar, south of Acroma. A trap in the event it proved to be, for a concentration of our armoured troops, evidently moving in close formation to attack, were suddenly met with overwhelming fire at close range and suffered disastrous casualties, leaving Rommel with decisive predominance in armoured strength.

The situation of the S. African and 5th British Divisions in the Gazala position and of the garrison of the Knightsbridge post at once became precarious in the extreme.

In Hillicie promptly ordered their withdrawal—a very difficult and dangerous operation; carried out successfully next day.

The South Africans, with all their equipment, fought their way back by the coastal road with insignificant losses, their first withdrawal being covered by the 38th Division, which remained in position—and, later, by the Acroma post and a vigorous counter-attack delivered by a much-depleted armoured division. The 38th Division also got away successfully by brilliant tactics. Instead of retiring in the obvious direction covered by a rearguard, they were concentrated into the Italian position, taking two divisions by surprise and throwing them into confusion. Doing all the damage they could in their passage; they wheeled south; and eventually, by a long detour through an area where the enemy was in possession, they reached safety. Whether the plan was conceived by General Grant or by the G.O.C. of the Division, it was an amazing example of what may sometimes be achieved by taking the unexpected course.

Rommel was in no condition to make a serious attack on our new positions before they were organized. His men admitted they were too exhausted, what with fighting and the heat. A small force, attempting to strike eastwards towards Halfaya, was sharply repulsed by the Sidi Rezzag post, and Ritchie had time to complete his dispositions; occupying the old Tobruk perimeter and also a strong position on the top, and not as formerly at the bottom, of the Halfaya escarpment. The situation was therefore much the same as it was before Auchinleck’s offensive last November.

Then came serious disaster. Rommel at first moved east with his armoured divisions towards Halfaya, while his main infantry and artillery body closed in round Tobruk. Then suddenly, when within 25 miles of the new position at Halfaya, he turned his armour about and, acting with the speed for which he is famous, on June 20 launched an attack on Tobruk with his whole strength preceded by heavy bombing by his Stukas. Attacking from the east, his armour forced its way through the perimeter defences, still incompletely protected by minefields; and his infantry followed through the gap. Then his tanks went on, and the end came on Sunday morning. Our troops fought gallantly, but probably they had not had time to organize their defences thoroughly, and there may have been a shortage of anti-tank guns. No doubt Rommel had received stronger reinforcements than was expected, but one must conclude that his resolute power of defence has not yet proved invulnerable to determined and skilful attack.

Rommel’s success was no doubt due largely to his resource, vigour and daring. He probably had advantage in the heavy tanks, of which he seems to have plenty in reserve, for though our "General Grant" tanks were good there were not enough of them to fight the German heavy tank; and no doubt Rommel made very skilful use of his numerical strength in this class of weapon.

Air power seems to have had surprisingly little influence on the course of the battle. The R.A.F. attacks on Rommel’s supply service, persistent and gallant as they were, never apparently caused serious interruption;

THE WESTERN DESERT, showing places involved in the fighting for Tobruk, which fell into enemy hands on June 21. After the evacuation of Bir Hacheim Rommel virtually surrounded the post and attacked it with overwhelming strength and drive. Courtesy of The Observer
and Rommel, except at Bir Hacheim, and at Tobruk, owed little to his Stukas. The air attacks made on our communications with Egypt did little damage, and may have had a reconnaissance purpose, to test defences, if an attempt to establish a block with airborne troops, reported to be assembled in Crete, is contemplated.

The question is certain to be asked, how did it happen that our armoured divisions fell into the trap, which so materially altered the whole situation? Normally it might be expected that it would have been discovered by advanced patrols or cooperating aircraft; but it would be grossly unjust to accuse one party of neglect of precautions. Probably dust had something to do with it, necessitating close dispositions in order to maintain contact; and if aircraft were working with the column it is easy to miss well-posted troops using the concealment immobility gives. Very low flying would not help, for if visibility is too low to give a view of an object as it is approached the difficulty of distinguishing it in the flash of passing over is very great. Consider how little can be seen of near-by objects from a railway carriage, and multiply the speed of the train by four.

All the strategical text books warn retreating armies not to take refuge in fortresses, but to retain their mobility at all costs. The advisability of holding Tobruk has consequently been questioned in some quarters. But wars cannot be fought on a literal interpretation of theoretical doctrines, and every situation requires analysis. In the first instance, it is still uncertain whether Ritchie’s decision was imposed on him by the difficulty of withdrawing his whole force to the frontier, or whether it was deliberately taken. Assuming the latter, there were arguments in favour of the decision. It would prevent large accumulations of stores falling into the enemy’s hands and deny him the use of the best port in Cyrenaica, and if Rommel intended to attack the Hafaya position he would have to lay his investing force at Tobruk to safeguard his communications. He would, therefore, be more vulnerable to counter-attack.

On the other hand, there was the risk that he might concentrate his whole force to attack the isolated position at Tobruk. But the defensive possibilities of the place had been proved, and it may have been thought that they had been increased by the power of new anti-tank weapons to repel armed attack. Possibly Rommel’s residual strength and power to launch an attack before the defences were fully organized were underestimated. The conditions in this respect were less favourable than when Wavell made his decision, for Rommel was stronger and his communications shorter. Against this, Ritchie had at Hafaya a stronger force than Wavell possessed, and it might shortly recover its offensive potentialities. Failing such recovery, a prolonged occupation of Tobruk would have imposed a heavy strain on the Navy; for the enemy air force in Crete exposed sea communications to constant air attack, and the port itself would be under persistent attack from near-by airfields.

Perhaps the worst feature of Rommel’s success is that it adds to the difficulty of the naval situation in the Mediterranean. His own sea communications have become more secure and ours less so. Possibly the appearance of the really long-range Liberator bombers in the Middle East, which must be most unwelcome to Italy, will partly compensate for the loss of our advanced airfields in Libya. They may also have a marked effect on the situation in Russia.

**RUSSIA** During the period under review, the situation was as tense at Sebastopol as in Libya. All through the fortnight desperate German attacks succeeded each other with hardly an interval, but the garrison, though hard pressed, fought magnificently and made frequent counter-attacks. Owing to the nature of the ground the Germans admitted that in most sectors tanks could not operate, and that they had to rely on infantry, supported by intense bombing attacks and artillery bombardment.

What that meant in casualties when attacks were repulsed we learnt in the last war; and one must conclude that the Germans considered the capture of the fortress to be of vital importance. Why would not investment of the place have sufficed? Is it because troops could not for long

be spared for the purpose, or aircraft to prevent the use of the port by the Black Sea Fleet? It seems more probable that the Germans require the port themselves in order to ease the supply problems of a major offensive in the south; especially that part of it which might operate from Kerch. Railway communications running east and west in South Russia are few and follow circuitous routes. Those served by the port of Sebastopol would gain immensely in value by its capture and are perhaps essential to the maintenance of a major offensive.

Von Bock’s renewal of the attack on the Kharkov front was also evidently a preliminary operation. It met with little success and was immensely costly.

If and when a major offensive does come the preliminary operations may have robbed it of much of its sting; and if it has to be postponed till preliminary operations reach a successful conclusion, the time lost will be huge. Russia will thus reach the anniversary of the opening of last year’s campaign in which lack of time was so much in evidence.

Moscow radio has commented on the failure of tanks against the new power of anti-tank weapons, and draws the conclusion that deep penetration by Panzer thrusts are unlikely to be attempted in future. That, of course, would mean slower operations than those of last year.

**FAR EAST** The situation in the Aleutian Islands is obscure, and it remains to see whether Japan will retain her footing in the islands. If she does it is unlikely to prove much value to her unless she becomes engaged in a war with Russia. Possibly the enterprise had that possibility in view, but under existing conditions it involves the maintenance of still another line of sea communication, and it has meant immediate and heavy naval losses.

Reduction in number of her aircraft-carriers must practically prohibit any further amphibious adventure which cannot be closely supported by shore-based aircraft. That, of course, reduces the danger of invasion of Australia and India.
At Close Quarters with the General Grants

MAN THE TANKS! The order has been given, and British crews are doublet towards the fleet of American General Grants lined up on the Libyan sands. This new tank, mass-produced in the U.S.A. during last winter, and since shipped to the Middle East, played an important part in the fierce battles of the Cauldon and Knightsbridge.

Preparing for further encounters with the Panzers, a General Grant, being loaded with ammunition somewhere in the desert.

A line of General Grants moving up for battle. Heavily armour-plated, some of these new tanks have survived direct hits.

MAINTENANCE MEN of the Royal Tank Regiment removing one of the tracks of a General Grant. Oval, ramming home a shell inside a tank. Right, cleaning the 75-mm. gun. The General Grant weighs about 28 tons and mounts two guns—a 37-mm. and a 75-mm. Though much "boosted" before the battle, after the fall of Tobruk it was stated that the General Grants were already obsolete in America, had vulnerable spots, and were too slow. Certain it was that there were not enough of them.
In the Libyan Inferno Round About Acroma

South African Mortar Section in action in the Western Desert. The South Africans, under Major-General Pluniar, were ordered by General Ritchie to withdraw from Gazala on June 13. Under cover of the 5th Division the daring manoeuvre was carried out, and the South Africans suffered only six casualties.

The 'Fighting French' at Bay at Bir Hacheim

Now we shall be able to show you that true Frenchmen still fight—and fight better than Germans. So ran a dispatch from the British Commander from the Free French troops who, after continuous persecution in Syria for months of unwelcome inactivity, were sent to join our Eighth Army in Libya. Below we tell how they more than made good their promise.

BIR HACHEIM! Just a spot on the map of the Western Desert, and in the midst of a four-mile-long plateau of sand and stone, in the middle of nothing, now as dry as the barren waste round about. But there came a day when it was turned into a formidable fortress, planted thickly with guns, machine-guns, mortars, machine-guns, and bells. To defend it, there was a little army—perhaps 4,000 men in all—who fought under the flag of Free France. The crew of that little army fought shoulder to shoulder with Parisians, Senegalese sharp-shooters, and above all, native warriors from New Caledonia in the far-distant South Pacific. How they were able to command the desert for so long, so that Rommel's communications were constantly threatened, is a story of the attack Ritchie's French army in the rear, as was apparently Rommel's plan, the Germans and their Italian allies had to run the gauntlet of the Bir Hacheim guns. So they finally cut out from Rommel: 'Bir Hacheim must be taken,' and again, 'The French at Bir Hacheim must be wiped out to the last man.'

But Rommel had not allowed for General Joseph Koenig—that valiant 42-year-old soldier who after fighting the Germans in the snows of Narvik and the over the Normandy beaches, had his way to face them with them again. According to report he had sworn never to sheathe his sword until his native Alsace was liberated from the Nazi yoke. And now he approached his task in a mood of sublime simplicity. 'My orders are to hold Bir Hacheim. I hold Bir Hacheim.'

So the attack began. At 7 a.m. on May 27, seventy Italian tanks tried to penetrate the minefields surrounding the plateau.

'We opened fire at two thousand yards with our 75s, which we got from the Vichy French after the Syrian campaign,' said a sergeant of the French Foreign Legion. 'They were wonderful guns. I watched tank after tank explode. At about a thousand yards we had destroyed fifteen tanks, but others still came on at a point well behind the Axis lines, whence they harassed Rommel's columns. This exploit and others like it made it all the more necessary for the enemy to subdue the Bir Hacheim. So further assaults were planned, and delivered, with tanks, artillery and Stuka dive-bombers. On June 2 an infantry attack in force with strong artillery support was tried. At midnight the attack began. The next day fierce shellfiring began, and this continued almost uninterrupted by day and by night until the ed. Bombing raids, too, were frequent. In almost contemptuous disregard of their losses in men TD machines had practically given out, and they had come to the exceedingly rude and quite unprintable word which General Cambronne is reported to have said at Waterloo: 'Napoleon, we have summoned the remnant of the Old Guard to surrender.'

An attack followed, and still the Free French held. In the course of a week the R.A.F. continued to give the greatest support and encouragement to the beleaguered garrison. So set out from Paris, 'I will kiss the first R.A.F. officer I see, whether he likes it or not. And after that I will have a hot bath,' a Briton remarked as a British plane swooped from the clouds and drove off a Stuka about to dive on to the French position. 'The Royal Air Force has done more for us than any other service.'

For more than a fortnight the bitter conflict went on. We don't feel that we are defending some insignificant oasis in the Libyan desert,' said one man, 'we feel we are defending our own homes in Nantes and Versailles.'

Below we tell how they more than made good their promise.

GENEAL KOENIG, Commander of the Free French Forces, whose valiant stand at Bir Hacheim against the Axis is among the great episodes of the war. Though the little garrison was compelled to retreat, their resistance was of vital importance. 'You are an example for all of us,' said General Ritchie in a message to this Allied hero. Photo, British Official

The attack was completely shattered and the survivors managed to cross the desert. But on the field of the encounter thirty-five Italian tanks flamed and smouldered.

Cheered by their success, the garrison in daring night raids patrolled after patrol, who played havoc with the enemy's columns and shot up many an infantry post. On June 1 British armoured cars which had assembled at Bir Hacheim swept out and occupied Hermel, a point on the Axis behind the Axis lines, whence they harassed Rommel's columns. This exploit and others like it made it all the more necessary for the enemy to subdue Bir Hacheim. So further assaults were planned, and delivered, with tanks, artillery and Stuka dive-bombers. On June 2 an infantry attack in force with strong artillery support was tried. At midnight the attack began. The next day fierce shellfiring began, and this continued almost uninterrupted by day and by night until the ed. Bombing raids, too, were frequent. In almost contemptuous disregard of their losses in men TD machines the enemy still came on, but it was not until June 8 that they succeeded in effecting their first penetration of the minefield.

Well did Bir Hacheim earn its nickname of the 'lost inferno.' Koenig's men were described as 'ghosts' by an Italian prisoner. We are beginning to believe that Bir Hacheim is the phantom Frenchmen,' he said; 'we cannot believe that they are still alive after the terrific pounding we have been giving them for the last ten days.' He added, 'Perhaps the Legion

Though sorely reduced in numbers, Koenig's men were fighting like maniacs.

Five times at least Italian officers advanced with the flag, and each time Koenig himself refused to surrender. Each time they were received with a blurt refusal, even jeers, and the French in their refusal got ruder again. In the last storm of officers had practically given out, and they had come to the exceedingly rude and quite unprintable word which General Cambronne is reported to have said at Waterloo: 'Napoleon, we have summoned the remnants of the Old Guard to surrender.'

Attack followed attack, and still the Free French held. In the course of a week the R.A.F. continued to give the greatest support and encouragement to the beleaguered garrison. So set out from Paris, 'I will kiss the first R.A.F. officer I see, whether he likes it or not. And after that I will have a hot bath,' a Briton remarked as a British plane swooped from the clouds and drove off a Stuka about to dive on to the French position. 'The Royal Air Force has done more for us than any other service.'

All France looks to you in pride, please convey this message to your men.' So ran the message, and General Koenig was quite willing to pass it on. It was a lesson in the brute, ruthless, jockeying and whining in useless fashion.

By June 7 the enemy had assembled ten thousand men about Bir Hacheim—Italians for the most part, but including a large number of picked Nazis, with plentiful tanks and artillery. Gradually the weight of numbers began to tell, and they were able to get their guns within a short distance of the French entrenchments. But always a small gap was kept open, and through this the defenders were able to receive a trickle of supplies. By June 10, General Ritchie decided that Bir Hacheim had done its job, and he gave orders that Koenig and his men should be withdrawn.

The operation was entrusted to a column of the British Seventh Armoured Division, and at the appointed hour, 11 p.m. on June 10, the garrison began to file on foot through the narrow gap in the southern sector of the minefield to where the Brigade had orries in waiting. Swiftly they were embossed and driven off some miles to the west, where R.A.S.C. parties were ready to receive them, their vehicles laden with the wounded that were capable of being moved.

But some of the garrison had to be left behind to cover the retreat of their comrades. To the last they kept up their fire, until on June 14 the last embers had died down and their Italian jackals swept over the plateau in triumph. More than 2,000 prisoners were claimed, with many guns and vehicles, and 1,000 dead were said to have been found on the devastated slopes. But the honours of war rested surely with the Fighting French.
'All France Looked to Them in Pride'

THE WAR IN THE AIR

by Capt. Norman Macmillan, M.C., A.F.C.

In the fast-moving panorama of the air war, some events appear to invest themselves with the significance of isolated incidents. Dramatic as these happenings often are, it is a mistake to regard them as things apart. Strategically, they are a part of the World War. The prudent observer must endeavour to fit them into their proper places, just as the pieces of a jigsaw puzzle must be so fitted to get the balance of the picture right. Such an event was the Battle of the Mediterranean Convoys which preceded the fall of Tobruk.

While the Libyan tank-air battle raged fiercely after the German break-through at Bir Hacheim, two great sea-air battles developed over and around the passage of two British Mediterranean Sea Convoys which preceded the fall of Tobruk.

Malta must be regarded as Britain's Middle East advanced air base. The use of Malta enables the R.A.F. to bomb southern Italy, Sicily, and Sardinia. It enables Britain to bring air pressure to bear upon the shipping supply lines of the Axis across the Mediterranean between Italy and Tripoli. It therefore exercises a restraining influence upon Axis supply bases of departure and arrival on the north and south Mediterranean shores and on the inter-connecting routes. That is why Malta was the subject of intense air attack prior to the opening of Rommel's spring 1942 offensive.

Malta is like an ocean aerodrome anchored 1,100 miles from Gibraltar and 650 miles from the nearest point of the Egyptian frontier. One of the most densely-populated areas of the world, it is not self-supporting. Supplies for its population and for its garrison must be taken there to enable it to function as an air base. The aircraft can be flown there, but bombs, torpedoes, petrol, oil, and spares must be transported by ship, or Malta will lose her offensive power.

From Alexandria to the battlegrounds of Libya stretches the desert. The straight line distance to Tobruk is 350 miles. Overland transport can be used, but larger quantities of vital war supplies can be carried by ships.

The R.A.F. and S.A.A.F. were pounding away at Rommel's tank and motorized columns thrusting eastwards in Cyrenaica, under the command of Air Vice-Marshall "Mary" Coningham (the nickname is a corruption of Maori, Coningham being a New Zealander) Boston and Kitty-Bombers struck many times a day at enemy columns and tanks, and definitely halted by air power alone several German armoured attacks on some of our defended positions. Fighter screens prevented enemy fighters from getting through to attack our bombers, and for days on end not a single Boston was lost.

For three weeks this operation continued non-stop from dawn to dusk, sixteen hours a day. But Rommel's forces still came on.

Huge supplies must have got through to the German Afrika Korps at Malta was under its spring traffic from the air.

But Rommel's supplies were clearly being used up faster than he could continue indefinitely to replace them, during this, the sixth Libyan battle. The storm of war lashed fiercer than ever before. At the moment when the British Eighth Army was in a strategic retreat to defensive positions in its rear, two convoys set out for Malta, one from Gibraltar, the other from Alexandria via Tobruk—timed to split up Axis opposition by their synchronization.

The Axis armies were left, with a minimum of air support, to fend for themselves, while almost the full brunt of Axis air power in the Mediterranean was diverted to the task of preventing the convoys from reaching Malta, which, to Rommel, mattered more than Tobruk.

The greatest sea-air battle ever fought raged for four days from June 13. The convoys were escorted by warships. The one from Alexandria was escorted by shore-based fighters. Beaufighters, each armed with three cannon-guns and four machine-guns, flew 300 miles westwards from Malta to meet the oncoming convoy somewhere between Cagliari and Bizerta.

An Italian fleet steamed southwards from Taranto naval base. Another Italian fleet thrust northward between Tunisia and Pantelleria, presumably to try to force the eastward-bound convoy close to the coast of Sicily where it would be within easy reach of shore-based dive-bombers. The Italian warships found they were not fighting warships, but aeroplanes. The fleet from Taranto was met 220 miles north-west of Tobruk by four-engined Liberator bombers flown by American crews and carrying heavy bombs, followed by torpedo-carrying aircraft. That fleet of two battleships, three cruisers, and ten destroyers turned and fled northwards with 23 hits on one battleship and 15 on another and both on fire. A cruiser was sunk, and other ships damaged. That fleet never got within five hours' steaming range of the British convoy. This convoy, attacked by aircraft, failed to reach Malta, but got some supply ships into Tobruk.

The threatened sea action in the Sicilian narrow developed into another major battle.

**Significant event in the Mediterranean war zone in June was the appearance in action of 4-engined Liberator bombers flown by American crews, whose guns the oilfields at Ploesti in Rumania; while others helped to bomb industrial warships during the attack on the Malta convoy.**

**Photo, British Official**

**Army and R.A.F. personnel refoiling and reloading a Spitfire on a Malta aerodrome. A brief lull followed the concentrated Axis air raids on the island, prior to Rommel's Libyan offensive, but when enemy forces reached the Egyptian frontier the bombing attacks on Malta were renewed.**

**Photo, British Official**

**The Axis air power was here used strategically to weaken our future position in preference to concentrating all their air power upon the battlefield. The flexibility of Axis air power is one of its chief features. The United Nations' air action was purely tactical.**

**Our supply lines are our greatest weakness. The Axis know that. They know, too, that air power can dominate supply lines when they pass within its reach. For that reason, air supremacy is for us a condition imperative for victory.**
Kittyhawks Seeking Their Prey in Libya

U.S.-made Kittyhawks in flight over Libya. Left, R.A.F. armourers bombing up a Kittyhawk on an advanced aerodrome in Libya preparatory to a raid on Rommel's positions.

CURTISS HAWK P. 40E—the Kittyhawk is P. 40D—with all guns ablaze during gunnery practice on the new Curtiss-Wright firing range in Buffalo. Oval, a Kittyhawk fighter belonging to the famous R.A.F. "Sharknose" Squadron landed during a sandstorm in the Western Desert, a mechanic on top of one of the wings guiding her. Though no details of the Curtiss Hawk P. 40E's firepower have been released, this American machine is among the most heavily armoured in existence.

At Canterbury the Nazis Bombed the Library

IN REVENGE FOR COLOGNE the Nazis raided Canterbury on the night of Sunday, May 31. The Cathedral Library was hit, and in the foreground of this photo some soldiers are seen clearing up the debris. Though it housed one of the oldest collections of books in England, the Library was a modern structure and its greater treasures had been removed to a place of safety. The Cathedral itself was not hit, although, said Dean Hewlett Johnson, it was singled out and dive-bombed.

We Dropped a Tricolour by the Arc de Triomphe

Fl.-Lt. A. K. GATWARD of the Coastal Command who dropped the Tricolour by the Arc de Triomphe in Paris and cannon-shelled the German-occupied Ministry of Marine building.

I'D never been to Paris before, but it looked exactly as I imagined it would: we studied a lot of guide books and photographs before we set out. We took a bearing from the Eiffel Tower and came in smack over the Defence Monument, and then headed straight for the Arc de Triomphe. I said to Sergeant Penn, my observer, "Are you ready with the first flag?" And he said, "Yes, I'm ready all right, but the slip-stream is nearly breaking my arm." He was pushing this weighted and furled flag down a flare shoot into the slip-stream from the propellers, and at the right moment he let her go. Vichy says it fell right on the tomb of the unknown warrior.

One of the things we wanted to look at particularly was the Ministry of Marine, because it was crammed with Huns, and we had something for them. We turned south a bit towards the river so we could come square up to the Ministry, and we were in line at a range of about five hundred yards before we let fly with our four cannons, and I saw the sparks flying off the building. We hadn't any time to see whether the shells burst inside, but a good deal went through the window. We sprayed the place from base to apex and we only cleared the roof by about five feet. While I was doing this Penn was shouting encouragement and pushing out the second flag, which we hoped would fall slap across the front door.

From Fl.-Lt. Gatward's broadcast, June 17

SCRAPING PARIS ROOFS Fl.-Lt. Gatward took his bearings by the Eiffel Tower, seen in the distance beyond the wing of his plane. Sometimes his machine was even below the level of the roofs. A second Tricolour was dropped near the Ministry of Marine in the Place de la Concorde. The whole flight from the time the aircraft was airborne until it returned to its base occupied 150 minutes, and was carried out without any serious interference by the enemy. The upper photo, also taken during the flight, shows a corner of the Jardin des Tuileries, running behind which is the Rue de Rivoli, where the Gestapo H.Q. are situated.

Three of the photographs in this page illustrate Mr. Molotov's visit to this country to sign the Twenty Years' Treaty of Alliance between Great Britain and Northern Ireland on the one hand and Soviet Russia on the other. They are: (1) Mr. Molotov greeted on his arrival in England by a senior Air Force Officer; (2) Mr. Molotov arriving by an L.N.E.R. special train at a London suburban station with (right) Mr. Maisky and Mr. Anthony Eden; (3) Mr. Molotov signs the Treaty on May 26th at the Foreign Office. On his left are Mr. Eden, Mr. Churchill and Mr. Attlee, while Mr. Maisky is on his right. (4) President Roosevelt and Mr. Molotov in Washington, where the latter arrived on May 29th. (5) Addressing the workers in a Moscow factory the text of the Anglo-Soviet Treaty.
In London on May 26 there was signed the Anglo-Soviet Treaty of Alliance—an event which history will probably rank among the greatest and most portentous happenings of the war. The story of the Treaty, framed in the preceding page, while in the preceding page are reproduced a number of relevant photographs.

I am glad to be able to inform the House that the negotiations which have brought about the Treaty reveal that the Government has concluded a treaty with the Union of Soviet Socialist Republics which confirms our alliance with that country during the war against Germany and her associates, in Europe.

Tremendous cheers greeted the declaration made by Mr. Anthony Eden, Britain's Foreign Secretary, in the House of Commons on the afternoon of June 11. There were more cheers still further until Mr. Erik Neumann, Mr. Molotov, Mr. Piatrov, and Mr. Brezhnev all stood up from Chequers; each night he returned to the Buckinghamshire seat. Little progress was made until there was an evening when Mr. Churchill placed on long talk "somewhere in the country" (presumably at Chequers) with Mr. Eden and Mr. Churchill. Mr. Maisky acted as interpreter, and the discussion continued confidentially. At this meeting Churchill and Molotov really got together, and learnt to appreciate and understand one another. They covered the whole field of the war, particularly the

TREATY OF ALLIANCE

Part I. Art. I. In virtue of the alliance established between the United Kingdom and the Union of Soviet Socialist Republics, the High Contracting Parties mutually undertake to afford one another military and other assistance in support of all kinds in the war against Germany and all those States which are associated with her in acts of aggression in Europe.

Art. II. . . . . undertake not to enter into any negotiations with the Hitlerite Government or any other German or Germanic State for the purpose of negotiating for the establishment of any kind of peace settlement by which we could make common cause with the Russian people. He recollected the Anglo-Soviet agreement of July 12, Lord Beaverbrook's visit to Moscow in September, and his own visit in December. Since then conversations had been continuing, and when the discussions had made sufficient progress the British Government had suggested that Mr. Molotov should come to London to talk. Meanwhile, Mr. Molotov had been invited by President Roosevelt to visit him in Washington, but he had declined, according to the Russian Commissar of Foreign Affairs, Lt.-Gen. Shelovskii, Maj.-Gen. Issayev, and a large team of military and diplomatic advisers. Having divested himself of his heavy flying gear, Mr. Molotov chatted with Mr. Moe, Soviet Ambassador in London, who was there to greet him. Mr. Molotov inspected the guard of honour formed by the R.A.F. and a famous regiment drawn up on the aerodrome. Shortly afterwards he and his party entered a special train and sped on their way south. The train stopped at a London suburban station, where Mr. Molotov was greeted on the platform by Mr. Eden, Sir Alec Wedderburn, Under-Secretary at the Home Office, and General Nye, Vice-Chief of the Imperial General Staff. Then he was whisked away by car to Chequers, where the negotiations were to be held, the country, which Mr. Churchill had placed at his disposal.

Negotiations began next morning in the Cabinet Room at 10, Downing Street, with Mr. Churchill in the chair. After an exchange of compliments the conference got straight down to business.

During the following six days other meetings were held, most of them in Mr. Eden's room at the Foreign Office, with Mr. Piatrov and Mr. Brezhnev attending. It was obvious that the Soviet Union had not yet come to terms with Germany. The British Government had been waiting for some time to hear that the Soviet Union was prepared to fight. The fact that Mr. Molotov was prepared to sign the Treaty was a great surprise to the British Government.

Thirteen days after the signing of the Treaty Mr. Molotov arrived in London. He was received with the greatest ceremony by Mr. Churchill and Mr. Eden. The British Government was delighted to have Mr. Molotov in London.

Mr. Churchill and Mr. Molotov met again on June 26. They were to discuss the terms of the Treaty. It was clear that the British Government was not prepared to sign the Treaty without some modifications. Mr. Molotov was prepared to sign the Treaty as it stood, but Mr. Churchill was not satisfied. The British Government was determined to have a Treaty that would be acceptable to the British people.

The only speeches were delivered by Mr. Eden and Mr. Molotov. "We are in a world at war," said Britain's Foreign Secretary. "Our two countries are together at grips with the common enemy. We live in an age of conflict. We all know the understanding which escaped us in the uneasy years of peace. The Treaty which we have just signed engages us to continue the struggle against the common enemy." But, on Mr. Eden's "One day the war will end. One day the common enemy will be defeated, and there will be peace again. We must see to it that this time peace endures. In the Treaty which we have signed we pledge ourselves to work together for this purpose."

Then Mr. Molotov. He described the treaty between the U.S.S.R. and Britain as "an historic step in the development of the relations between Britain and the Soviet Union. The Treaty is essential, not only to the peoples of the U.S.S.R. and Britain, but to the peoples of other countries. It is a Treaty which all the peoples who have experienced the aggression of the German-Fascist Imperialists, or whose freedom and honour have been threatened, and who will be threatened by an endless band of robbers, oppressors and ravagers— all these will express their satisfaction at the conclusion of this historic Treaty.

Shortly after signing the Treaty Mr. Molotov, who in the intervals of the discussions had been received by the King, visited a fighter station in company with Mr. Churchill and with Mr. Maisky who inspected the damage in London. From London Mr. Molotov stayed for a brief visit in Moscow, and then proceeded to Moscow.

Cables were conveyed at the White House which resulted in the conclusion of the Lease of the Canal Zone between Russia and the U.S.A.; and "a full understanding was reached with regard to the urgent tasks of creating a second front in Europe. Mr. Molotov said that the Government of Mr. Molotov stayed for another brief speech in London, and then proceeded to Moscow.

Only when he had arrived back there, and only then did security reasons permit the disclosure of his visits and their fruit. Mr. Eden's statement in the House of Commons was made, as we have seen, on June 11; and immediately afterwards an announcement was issued by the Foreign Office which was interesting chiefly because of the statement, in almost the same words as that of the Washington announcement, that "full understanding was reached between the two parties with regard to the urgent tasks of creating a second front in Europe in 1942"; it also stated that discussions had taken place on the question of improving the supplies of aeroplanes, tanks, and other war material material.

Throughout the world of the United Nations the conclusion of the Alliance was hailed with the greatest satisfaction. Mr. Stalin and Mr. Churchill exchanged congratulations, and the King and President Kalinin sent cordial greetings.

Speaking in the House of Commons after Mr. Eden, Mr. Lloyd George said that the treaty had been a fact some years ago, many grave blunders in foreign policy would have been avoided. Not only that, this war could never have occurred.
A Big Raid on Germany Is Planned

Here are the men entrusted with the greatest aerial offensive in history. They are Air Marshal A. Travers Harris, Chief of Bomber Command (seated) with his Chiefs of Staff, Air Vice-Marshal R. H. H. Saundby and (left) Air Vice-Marshal R. Graham. Top, the Station Commander with a Boston III crew discusses in the operations room the "target for tonight."
**The Heavy Bombers Take-Off**

R.A.F. personnel having received their orders, big raid operations begin. (1) Ammunition checking over the bombs before loading them into a Stirling. (2) Crew of one of the Whistling-Tonks going aboard in the dusk. (3) A twin-engined Manchester setting forth for enemy territory. Many types of machines took part in the huge raid on Cologne on May 30.

**Over the Target and Back Again**

Near the objective, the aircraft becomes increasing, as may be seen in photograph (4). Nothing was damaged, however, the Stirling has dropped its bombs and is returning to base (5). In photograph (6) are two of our many pilots who were once "too few." Their attitude has been summed up in the words "Brave yet cautious, cool yet daring."
The Raiders Report Success

In the upper photograph Boston bombers are seen over Le Havre docks during a daylight attack. Bombs are exploding across the dock gates while others have burst among the barges. Beneath, the Intelligence Officer is interrogating members of R.A.F. crews who have just returned from the raid. All facts are carefully recorded.
Tobruk Was Taken by Storm at Last

"Well, boys, it was not quite so bad this time. We've caught the Tommies at last." So Rommel was heard to remark to some of his men in a partridge field, within the perimeter of the fortress of Tobruk.

It was Saturday afternoon, June 20, and although the battle was to rage for hours more, Tobruk's fate was already sealed. Very likely its fate was sealed days before - on the previous Saturday when General Ritchie's tanks were caught in Rommel's ambush south of the Trigh Capuzzo between Knightsbridge and El Adem. It was a stricken field, one on which our armour was shattered beyond immediate repair. Following this defeat, Gazala had to be evacuated; and soon afterwards Acroma and El Adem were also abandoned, since Rommel was now pushing on in overwhelming strength. Possibly on Thursday (June 18) and certainly by Friday night, Tobruk was isolated once more, and every hour that passed added to the force with which it was encompassed. Thousands of lorries were observed making their way up the coast road from Derna; arrived at the Axis by sea; and south of Tobruk, they unloaded at every key point more guns, more troops, more supplies.

Late on the Friday night two German columns which Rommel had sent on reconnaissance towards the Egyptian frontier returned from the Bardia district to Sidi Rezegh, where their tanks were added to the great number already assembled. Meanwhile in Tobruk a mixed force of British, Indian, South Africans and their allies, supported by all too few tanks and guns, were struggling desperately in a fresh state of defence. They strove manfully, and soon the trenches and defence works, largely sited up with sand, since Tobruk was left in a backwater last December, were manned by the men in khaki.

During twilight on the Friday evening Rommel brought up his troops to within easy striking distance. This, according to an account issued by the German News Agency, was his decisive maneuver: "To install them in their new positions without giving them an hour's rest and send them in to attack Tobruk early next morning."

At 5.20 a.m. on June 20 the assault was launched. First there was a furious attack by fifty German and Italian dive-bombers on the first line of field fortifications; the air cover of the defence was nil. While the bombers were still there, shaking the earth for hundreds of yards, batteries concentrated on a gap only three miles wide in front of Ed Duda, facing the west-south-east corner of the fortress. They put up a "veritable drum-roll of shelling against the front lines."

"As the range was lengthened," continued our quotation, "our sappers rose from their quick-dug ditches to clear up mines and cut wires in the forefield. Despite violent artillery and machine-gun fire, they advanced rapidly. Our tanks were faced with deep, cunningly excavated tank traps running the length of the defence line, presenting an obstacle difficult to overcome. Here the pioneers had to create a bridge for the tanks, and they went to work at three points at the same time. They pushed tank bridges, previously carefully assembled on wheels, into the ditches, and mounted them under the cover of the ditches themselves. The tanks could then go on and occupy the fortifications with their fire, while the columns were able to flow on undisturbed through the gap and deep into the inner fortifications."

While the tanks spread out in fanwise fashion, heavy-borne infantry from the German 90th Light Division, supported by the Italian Trieste and Ariete Divisions, followed close behind or were hurled in wave upon wave, completely regardless of casualties, on the defences to left and right of the gap.

Tobruk, looking across the harbour from the coastal road which runs to Gambut and Bardia. In the background are the white-walled houses of the town, and not far from the shore lies a half-submerged merchantman. As said in this page, the place was over-run by Rommel's forces in 24 hours.

One force of tanks, estimated to number between 30 and 40 (reported Richard MacMillan of the British United Press), was widening the gap in the south-east of the defence; another strong armoured force, strongly supported by infantry, dashed down the main El Adem-To Bruk road. The British Commander sent out two strong tank forces to meet them, but they encountered an uninterrupted hail of shells from every piece of artillery the Germans could drag on to the escarpment. One by one our tanks went up in flames after a fierce struggle, the Axis tanks were in control of the highway. Then wheeling to the east, the Germans took in the rear those who were still resisting the thrust from the south-east; still bigger tank forces dashed against the British artillery and overran the divisional H.Q.; yet another group forced its way towards Tobruk.

It was at 9 a.m., according to the German account, that Rommel's infantry, tanks and artillery broke through the minefields into the inner ring.

"The British thundered at the narrow gap with numerous batteries without causing anything more than a temporary nuisance to the ever-rising tide of attack. Soldiers who had not slept for days drove the defenders of Tobruk before them. Whatever fortifications lay to the left and right of the gap were taken or forced to surrender.

Rommel did not trouble himself with what was happening away from the gap. The batteries followed close on the guns and tanks; every ten minutes they changed their positions to shell the targets with unparalleled effectiveness. More and more of the enemy came towards us with their hands up. Tanks sent to attack us were shot up by our tanks and pressed back. Enemy batteries were quickly found and ground to dust. The number of blazing vehicles rose from minute to minute."

Riding at the head of the tempestuous advance in his light armoured car, Rommel reached the crossing of the El Adem-Tobruk road with the Via Balbia at 11.30 a.m. He was then already eight miles inside the perimeter. By 4.45 p.m. the main positions were completely in German hands, although some of the coastal guns were still firing, and heavy fighting was still going on near the town. During the night fuel dumps, fired by the defenders, went up in flames, and when Sunday dawned a thick pall of black smoke covered the harbour.

In the early morning of Sunday the garrison of Fort Pilastrino surrendered, but small fortifications in the outer ring continued fighting until the afternoon. In Tobruk itself the struggle continued, and up to late in the evening R.A.F. reconnaissance planes reported that fighting was still going on.

All through Saturday the General Officer Commanding the garrison had been in communication with Eighth Army H.Q., although he had to move his headquarters hourly from one place to another inside the perimeter. But after 7 o'clock on Sunday morning there were no more messages.

"At seven a.m. this morning," said a special announcement issued in Rome at 14.45 on Sunday afternoon, "a British officer presented himself at the command of our 21st Army Corps to offer in the name of the Commander the surrender of Tobruk fortress. Axis troops have occupied fortress, town, and harbour, 35,000 prisoners, including several Generals, have surrendered." The booty was stated to be considerable, and the capture of Bardia was also reported.

Not until 12.7 a.m. on June 22 was it officially confirmed in London that Tobruk has fallen. A few hours later Hitler promoted Rommel to the rank of Field-Marshal.
United Nations Day in London and New York

THE KING AND QUEEN taking the salute on the occasion of the United Nations Day celebration on June 14. They are seen (close to the bottom edge of the photograph) on the platform facing the Victoria Memorial in front of Buckingham Palace. In the photograph (radiated from America—hence the slightly fuzzy appearance) at the top of the page a detachment of the Royal Navy is marching through Fifth Avenue in New York, as part of the programme of United Nations Day in the great American city.
The Beat of Liberty in the Heart of England

FLAGS OF FREEDOM, representing twenty-five Allied Powers, in the Market Place, Aylesbury, during the celebration of United Nations Day on June 14. It was from Aylesbury, a typical English country town with associations with John Hampden, that the ceremony was broadcast. The American-born mayor, Mrs. Olive Paterson, read a Government message, while United States troops (on left) and units from other Allied forces paraded.

THE WAR AT SEA

by Francis E. McMurtrie

On the importance of ample air support for naval forces operating in narrow waters has been emphasized. So far as can be gathered from various accounts that have been published of last month's convoy action in the Mediterranean, surface forces did not come into contact except for a brief period. Most of the damage inflicted on the enemy was by air attack. For the first time in the Mediterranean American aircraft took part in the action.

On this occasion, to give supplies a better chance of getting through, two strongly escorted convoys sailed simultaneously, one from Gibraltar under Vice-Admiral A. T. B. Curtes, the other from Alexandria under Rear-Admiral Sir Philip Vian. The latter force, having passed supplies into Tobruk, was steering a course towards Malta when air communications reported an Italian air force, including two battleships of the Littorio class, four cruisers and eight destroyers, at sea south of Taranto. During the night of June 8, the two Italian attacks were made by Allied aircraft, including bombers manned by American personnel and British torpedo planes. Several bomb hits were made on the two convoys, causing fires. A torpedo hit may also have been scored on one of them. A heavy cruiser of 10,000 tons, belonging to the Trento class, was set on fire by bombs and ultimately sunk by a torpedo from one of our submarines. At least one smaller cruiser and a destroyer were also damaged. As a result the enemy altered course to the northward and retreated to the Taranto naval base.

On the same morning another Italian force was driven off by British torpedo aircraft off the island of Pantelleria, between Sicily and Tunisia. It was composed, according to an Italian official statement, of the cruisers Eugenio di Savoia and Raimondo Montecuccoli, and the destroyers Ugolino Vivaldi, Lanzerotto Malocello, Ascarì, Orione and Premuda, under the command of Rear-Admiral Alberto da Zara, aged 53. One of Admiral da Zara's cruisers was set on fire during the engagement, and a destroyer was almost certainly sunk.

Throughout the week-end, on June 13, 14 and 15, many bombing attacks were intercepted, heavy fighting taking place. On one occasion a raiding force of 40 Junkers 88s and Ju.88s, escorted by more than 20 Messerschmitt 109s, was intercepted. Undoubtedly considerable losses were inflicted on the Axis air forces in this action, 43 planes being certainly destroyed, and probably 50 per cent more. In attacks made on the eastern convoy the enemy lost at least 22 aircraft. (For a discussion of the air aspect of the battle see page 40).

It has been emphasized by the Admiralty that Axis claims to have sunk four British cruisers and to have damaged a battleship and an aircraft carrier are fantastic and without foundation.

Though the difficult operation of escorting convoys through the danger zone between Italy and Tunisia and Libya was not accomplished without loss, the object of delivering supplies to the garrisons of Malta and Tobruk was effected in spite of the enemy's efforts to intercept the convoys. Thus as much success as could be expected in such circumstances, had been achieved. Had the Italian squadrons stayed to fight it out, there is no doubt that the success would have been far more decisive, but for good reasons, based on sad experience in the past, the Italian Navy never risks encountering our fleet at sea if it can avoid it.

In all, the British losses amounted to one cruiser, four destroyers and six lighter vessels, besides 30 aircraft. At the lowest estimate, the enemy lost a heavy cruiser, two destroyers, a submarine and 65 aircraft, besides having abandoned their best battleships torpedoed and put out of action.

There are five Italian battleships in service. Two are modern ships of 41,000 tons, the Littorio and Vittorio Veneto; and the other three are rebuilt ships of 33,622 tons, the Giulio Cesare, Andrea Doria, and Caio Duilio. A sixth ship, belonging to the latter type, was the Conte di Cavour, reduced to a wreck by the British torpedo attack from the air at Taranto in November 1940; she is not believed to be fit for further service.

On June 12 the United States Navy Department revealed details of the operations in the Coral Sea during May, which for reasons of security could not be published earlier.

Though surface forces were never in contact, it is considered that the Japanese lost 15 warships, all from air attack. The United States force, which was under the command of Rear-Admiral Frank J. Fletcher, lost only three. The action began with an air attack on Japanese ships in the vicinity of Tulagi, in the Solomon Islands. In this affair 12 Japanese ships were sunk or badly damaged, and six aircraft destroyed. The Americans lost three planes. On May 7 an attack was made on the main enemy force in the Louisiade Islands, resulting in the sinking of the new 20,000-ton Japanese aircraft-carrier Ryuakku, which received ten torpedo and 15 bomb hits. Caught just as she was turning into the wind to launch her aircraft, she took most of them to the bottom with her. A heavy cruiser was also sunk.

Counter-attacks by enemy aircraft were beaten off, more than 25 Japanese aircraft being brought down as compared with six American. In the afternoon, however, the enemy located the U.S. naval oiler Neomok and an escorting destroyer, the Sims, of 1,570 tons, sinking the latter and so badly damaging the former that she founded some days later.

On May 8 a further attack was made on the Japanese force, a second 20,000-ton aircraft-carrier, the Syokaku, being bombed and torpedomed. When last seen she was badly on fire. A counter-attack was concentrated on the U.S. aircraft-carrier Lexington, of 33,000 tons, which was hit by two torpedoes and two bombs, this being the last incident of the action. Though the fires raging in the Lexington were extinguished, and she was able to proceed at a speed of 20 knots, a tremendous internal explosion occurred several hours later, due to ignition of petrol vapour from leaks caused by the torpedo damage. After five hours of vain endeavours she had to be abandoned, blew up and sank.

In the action off Midway Island between June 4 and 7 aircraft-carriers again played the principal part, though the surface ships do not appear to have come within 100 miles of each other. Full details have yet to be published, but Admiral Chester W. Nimitz, Commander-in-Chief of the United States Pacific Fleet, considers that two Japanese aircraft-carriers, identified unofficially as the Akagi and Kaga, each of 26,900 tons, were sunk, as well as a destroyer. One or two more aircraft-carriers, three battleships and four cruisers received damage of a more or less extensive nature. (See page 61).

On this occasion the only American warship lost was a destroyer, torpedoed by a Japanese submarine. Some damage was sustained by a U.S. aircraft-carrier. Apparently the enemy casualties were mainly due to air attack, though the destruction of one of the aircraft-carriers was caused by three torpedoes from an American submarine.

Following on the Coral Sea losses, this Japanese defeat off Midway seems likely to be the turning-point of the naval war in the Pacific. In tonnage the Japanese fleet has lost about 45 per cent of its aircraft-carriers, a type of war vessel of which the importance can hardly be exaggerated.
U.S. AIRCRAFT-CARRIER LEXINGTON, 32,010 tons, just before she blew up on May 8 in the course of the battle of the Coral Sea. Her crew, being unable to put out the fires, are leaping into the sea to be rescued by destroyers. On the right is another photograph of the Lexington, her entire length ablaze, and in the smaller illustration is a view of the carrier with aircraft aboard during pre-war manoeuvres off the Virginia Cape. The Lexington was hit by two Japanese torpedoes and at least two bombs. She caught fire, and although the crew worked heroically for more than five hours to put out the flames it was impossible to save her. Captain F. C. Sherman gave orders to abandon ship, and 92 per cent of the Lexington's company were rescued before she sank.
Midway Was a Victory for the United States

Most important of the three Midway Islands, situated in the Pacific Ocean about 2,800 miles from Tokyo, is Sand Island above; on the right is a close-up of the island showing rows of tough grass planted as a barricade against the ceaseless drift of sand. Beneath the landing stage at Midway, with a Pan-American clipper in the lagoon. The battle of the Midway Islands, on June 7 proved a heavy defeat for the Japanese navy. The United States Navy spokesman revealed at Honolulu on June 12 that probably four Japanese aircraft-carriers, including two of the heaviest type, were destroyed in this action, and that many other vessels, including three battleships, were damaged.

SAND ISLAND: a caterpillar-tractor preparing land for the building of a seaplane base (left). Right, baby albatrosses, or goonies, on a Midway Island beach. The map indicates the position of Midway, relatively to Tokyo, San Francisco and Dutch Harbour in the Aleutians. Japanese forces operating in the last-named area were also heavily hit by American torpedo bombers, a cruiser being reported to have been sunk and an aircraft-carrier damaged.

Dutch Harbour: War at the ‘Top of the World’

While the tempo of the war in the more southern regions of the Pacific seemed to slacken somewhat, there were reports of Japanese activity in the far north, in the Aleutian Islands, which might presage a move either against Alaska and the North American mainland, or against Siberia in Soviet Asia. Some account of this new “top of the world” war area follows.

Dutch Harbour, bombed by the Japanese! How many people when they read the American Navy Department’s announcement on June 4 were able to put their finger on the spot which marks Dutch Harbour on the map? At once, or at last, they found it—in the Aleutian Islands, that long chain of dots that joins America and Asia not so very far south of the Arctic Circle (see map opposite). If the atlas does not show it, they would probably not find it at all, and only those with a globe could appreciate the full significance of the news. For a globe makes it plain that the shortest distance from North America to Eastern Asia—Japan in particular—runs through or near those same islands. That is the “top of the world” route where the trail was first blazed by Soviet flyers in 1937.

Strung out like a chain between the two great land masses, the Aleutians cover a distance of some 1,200 miles from end to end. There are 150 of them, but most are small and very few are inhabited—which is not surprising since they are hardly pleasant places in which to live. Fogs are almost perpetual, for it is here that the comparatively warm Gulf Stream contacts the bitter blasts from the Arctic. The rainfall is heavy; the winters are long and often severe, while the summers are short and never really warm. Hardly a tree is to be seen on any of the islands, although between May and September the ground is covered with rich grass, thickly sown with flowers. A towering mountain, the highest in Alaska, the islands are themselves the summits of a chain of volcanoes; and there are numerous cones which are still active. The coasts are rocky and desolate; from the shore the land rises immediately to steep and rugged mountains.

In this inhospitable region the human family is represented by the Aleuts, a branch of the Eskimo stock, and as such resembling the Eskimos in features, language, and in culture. Years ago, before the Aleuts became part of the Russian Empire, they were said to number 25,000 Aleuts on the archipelago, but even then they were almost wiped out by the barbarities of the white traders, who went there to secure the fur of the seal and sea otter. They spent their lives in the cold and Arctic fox. Twenty years ago the population was given as 1,080, and the natives are probably not much more numerous today. But in addition to the natives the Aleuts possess a large population drawn from the armed forces of the U.S.A. For the islanders are now American, and though their economic importance is of small account, in the strategy of the Pacific they have a great and growing place.

Politically, the Aleutians form part of the territory of Alaska, one of the components of the U.S.A. Until 1867 Alaska belonged to Russia, but in that year all the Tsar’s possessions in America were ceded to the United States. The price was paid. The U.S.A. 7,200,000, and Mr. Secretary Seward, who negotiated the purchase, was scoffed at by his countrymen for having paid too much. But regard them as very poor pay. For years Alaska was called “Seward’s folly” and a “glacial icebox”; and it was much despised. The situation changed when Seward had been dead for twenty years, that his foresight was vindicated. Then the discovery of gold put Alaska on the map, and to gold there were soon added copper and silver, coal and timber and enormously rich fisheries. Alaska, which is so vast it is equal to one-fifth of the continental U.S.A., is indeed one great treasure-house of economic resources which still await full exploitation.

But the Aleutians are not among Nature’s favours; climate and soil and configuration all conspire against any agricultural, industrial or commercial development on a large scale. The natives have always lived by fishing and hunting, supplemented by basket-making on the part of the women; their agriculture is represented by little more than some not very productive vegetable plots. The plateau is used only for other purposes; it is war, and the preparations for war, that have led to their immigration.

Most important of their settlements is Dutch Harbour on the island of Unalaska, one of the largest in the chain. Here there is a first-class harbour, two miles long and half a mile wide, which, moreover, has the great advantage of being ice-free all the year round. At Dutch Harbour the Americans have constructed a base for their naval, army and air forces; fringing the shore are great oil tanks, huge depots of military stores, a radio station and a shipyard, where (so it is rumoured) submarines are being constructed. There are aerodromes, too, and aircraft factories and repair shops.

It was only about a year ago, soon after the Germans had invaded Russia, that Col. Knox, U.S. Navy Secretary, announced that Dutch Harbour was to be developed as an American base. The decision was soon acted upon.

"Into Dutch Harbour and Unalaska," Alec Hunter wrote recently in the News Chronicle, "roared construction crews—about 2,000 husky, hard-bitten, industry’s soldiers of fortune. Already there was an unspeciﬁed number of Army and Navy men to man the base, and others descended on Unalaska, really a quiet herring-fishing village with a native population of 300 Aleut Indians. Saturday nights in Unalaska were tough, with liquor stores, one saloon—Black Ford’s Unalaska Cocktail Bar. It is, in spite of everything, ordered by the military police and the U.S. deputy marshal to see that.

From Dutch Harbour to Tokyo is 2,850 miles, and to the Japanese naval base of Paramushiro some 1,600 miles (Paramushiro is in the Japanese Kurile Islands, just south of the Russian peninsula). Aircraft-carriers based on Dutch Harbour might well then threaten Tokyo. No wonder the Japanese Admiral Matsunaga declared a few months ago that "if so the Japanese fog had lifted" the Japanese air force would make Dutch Harbour one of its objectives.

That promise was carried out (as we have seen) on June 3, when Dutch Harbour was twice attacked by Japanese planes. A week later American Japanese Headquarters in Tokyo issued a communiqué stating that "Japanese naval units operating in the Eastern Pacific carried out a surprise attack on Dutch Harbour, Unalaska, destroying all the entire Aleutian Island group, and continued raids on enemy positions there on June 4 and 5. After a reference to fierce attacks made on Midway Island by the Japanese, it went on to claim that on June 7 Japanese naval units in close cooperation with the military landed, overran and reduced enemy positions in the Aleutian Islands, and are now continuing operations there."

To some extent these claims were confirmed by the U.S. Navy Department: there had been landings by the enemy at Attu, most westerly of the islands, it was announced, and at Kiska in the Rat group. Attu—800 miles from the northern islands of Japan and a little more from Dutch Harbour—is a desolate spot of very doubtful military value; as often as not it is buried in fog or swept by storms, and its only inhabitants are reported to be about a hundred primitive Aleuts, a few soldiers, and a civilian employee of the Weather Bureau and his school-teacher wife.

Much more important is Kiska, which is stated to have one of the best harbours in the Aleutian group. It is still undeveloped, this harbour might be of considerable use to the Japanese fleet and air force. From its aerodrome, which is stated to be ready now, enough to allow four-engine bombers to take off, Japanese aircraft could operate against Dutch Harbour, which, as stated above, is only some 800 miles to the east. Kiska is also 800 miles from the Russian base of Petropavlovsk in Kamchatka—a fact which might well be of considerable importance in the strategy of Soviet Russia coming into the war.

Following the announcement of the Japanese landings there was little fresh news from the Aleutian front. The U.S. Navy Department revealed that air attacks against the islands were continuing. "The foul weather and fog characteristic of this locality at all seasons are hampering our reconnaissance and attack operations, but reports to date indicate that at least three cruisers, one destroyer, one gunboat and one transport have been damaged, some severely." Then the operations were blanketed again in fog as thick as that which for six days out of seven shrouds the Aleutians. E. ROYSTON PIKE

THE JAPANESE OCTOPUS. In this ingenious conception of the war in the Far East Japan is represented as an octopus, with farads of Ausralia, New Zealand, Midway, Alaska, China and India. Had the United Nations the appropriate strategy and the weapons essential to that strategy, the direct way of destroying Japan’s power would be to strike at Japan heart, thereby stop the heart of this “sprawling beast.” In that event the tentacles would fall limp and release their grip from territories now in Japanese possession. Thus the super-plane attack of the Douglas B-19 and Glenn Martin flying-boat size which might attack Japan direct across the 3,100 miles from Alaska to Tokyo.

Men of the Sea, They're Planning the Next Convoy

TYPICAL CONVOY CAPTAINS, Mears, Brown of Glasgow, F. W. Fawcett of Gravesend and L. A. Shuttleworth of Sunderland, exchanging experiences before attending a conference to settle the procedure to be adopted on the next voyage.

Captain McInnes (above) hails from Glasgow, and that rugged Scots face, inscribed with a grim humour, is known in many a port. To bring home the goods he is obviously ready to defy all the U-boats in the world. Left, the Convoy "Brains Trust," who are in charge of the Trade Division at the Admiralty. Here are some of the men who plan the struggle upon which all battles depend—the fight to keep the seas open. They are, left to right, Captain Blissetton, Commander Morey, Vice-Admiral King, Commander Leggatt and Captain Schofield.

Beneath, an outgoing convoy assembled at a selected rendezvous. Anchors have been dropped, and barrage balloons raised, while the masters of the vessels have gone ashore to receive final instructions.

Photo, G.P.U.

Page 58
Our Submarines and Theirs: a 'Bag' of Exploits

A U-boat has been sighted by a Whitley aircraft of the R.A.F. Coastal Command in the Bay of Biscay. In a few seconds the bomber is over the enemy and bombs have been accurately placed. As they explode a huge column of water ascends into the air, as seen in photograph No. 1. Two minutes later the conning-tower of the U-boat, forced to the surface by the explosion, appears, No. 2. In the third photograph a large patch of oil, nearly 200 yards in diameter, and air bubbles denote the complete destruction of the enemy submarine. So the ceaseless war against Hitler's sea-wolves continues.

Photos, British Official; G.P.U., Lafayette

Emanating from Rome, these photographs (above) show an American merchant ship going to her doom soon after she had been struck by an enemy torpedo.

Photos, Krypton

One of the bravest deeds of the war was revealed when Lt. P. S. W. Roberts, R.N., and P.O. Thomas Gould (right and left, above) of H.M. submarine Thrasher, were awarded V.C.s. The Thrasher had sunk a supply ship on February 16. She survived a depth charge, but when she surfaced after dark two unexploded enemy bombs were discovered in her gun-casing. Lt. Roberts and P.O. Gould volunteered to remove them. They had to lie full-length to carry out their dangerous task. Having dealt with one bomb, they pushed the second for about twenty feet until it could be lowered over the side. The photograph shows A, where the first bomb penetrated, and, A1, where it was discovered (left). B indicates where second bomb was found, and C shows P.O. Gould in casing hatch through which the bomb was dragged.
CHEERS AND SMILES CAUGHT BY OUR CAMERA

WORKERS OF THE WEEK, three women specially chosen and honourably mentioned by the Ministry of Supply. The first is Mrs. Edith Foster, "blue girl," or supervisor, in a Welsh royal ordnance factory. Mrs. Foster is in charge, under a foreman, of 14 machines.

Mrs. Alice Watts, mother of six children, who has registered 100 per cent attendance in a north-west ordnance factory. Also a blue girl, she is in charge of a number of girls filling shells, bombs and anti-tank mines. She has never missed a day's work. "Two of her daughters are in the same factory."

Mrs. Rose Jackman (right) looks for Spitfires, doing it with her bare hands. "It's the knack of suddenly putting all your strength into your wrists that does it," says Rose.

H.M.S. PENELOPE, familiarly known as H.M.S. "Peperpot," showing part of her splinter-riddled sides caulked with wooden pegs. The cruiser was continuously attacked for two weeks by Axis bombers while she was in Malta Harbour, but fought off the planes, put to sea and was brought safely to port.

(See also page 28)

Beneath: the ship's company of the U.S. flagship cheering King George on the occasion of his visit to the U.S. Navy with the Home Fleet. His Majesty is aboard the small auxiliary vessel, Mordialloc, thereby conferring a unique honour on the Merchant Navy by reviewing the Fleet from the bridge of a merchantman. The Mordialloc is flying the signal "splice the main brace," which means a double portion of rum for all wherewith to drink the King's health.

MINISTER OF FUEL. Major G. Lloyd George, appointed head of the new Government department to deal with the coal and fuel problem. The second portrait is of Group Capt. G. N. Ambler, who has been appointed Commandant of the Royal Observer Corps in succession to Air Commodore A. D. Warrington-Morris. Commodore Ambler joined the Auxiliary Air Force in 1931 and commanded Nos. 608 (North Riding) and 609 (West Riding) Squadrons. On right, Lord Swinton, who has been appointed Minister Resident with Cabinet rank in West Africa. Lord Swinton was Secretary of State for Air from 1935 to 1938.

I WAS THERE!  
Eye Witness  
Stories of the War

‘Give Me a Moonlight Night and My Hurricane!’

Destroying enemy bombers over the home bases is known as “intruding” to the night-fighters of the R.A.F. One of the most successful intruders, Squadron-Leader MacLachlan, gave some account of his nocturnal operations in a broadcast on May 18.

Most of us night fighters are too fond of our mornings in bed to go flying our daytime. Give me a moonlight night and my old Hurricane and you can have your Spitfires and dawn readiness. We’ve no formation flying to worry about, and no bombers to escort. In fact, nothing to do but amuse ourselves once we’ve crossed the French coast.

I must admit that those miles of Channel with only one engine bring mixed thoughts, and one can hardly help wishing for a little fresh of the old “Merlin” as our English coast disappears in the darkness. Always I get a feeling of excitement and excitement across the French coast and turn on the reflector sight, knowing that anything I see then I can have a crack at. We have to keep our eyes skinned the whole time, and occasionally glance at the compass and clock.

As the minutes go by and we approach the Hun aerodrome we look eagerly for the flare paths. More often than not we are disappointed. The flare path is switched off as soon as we arrive and up come the searchlights and flak. But if you’re lucky it’s a piece of cake. The other night I saw the flares come on in the daytime. They were flying round at about 2,000 feet. I chased the nearest and followed him round. He was battling along about 200 miles an hour, but I soon caught him and got him.

The effect of our four cannon is incredible after the eight machine guns I had previously been used to. Scarlessly had I pressed the button when a cluster of flashes appeared on the bomber and a spurt of dark red flame came from its engine. Then it seemed to fold upon itself and fall like the sky. I turned steadily to watch it crash, and as did I saw another Hun about a mile away, coming straight for me. In about a half a minute he was in my sights, and a second later his port petrol tank was blazing. I gave him another short burst for luck and then flew back just like watching a film. A moment before he hit the ground I could see tress and houses lit up by the dark red glow from the burning machine. Suddenly there was a terrific sheet of flame, and little bits of burning Heinkel flew in all directions.

I flew straight back to the aerodrome to find another. Unfortunately, all the lights had been switched off, and though I circled for some time I found nothing. So I cracked off for home. I looked back once and could see the two bombers burning in the distance, and a few searchlights trying vainly to find me.

Well, when your petrol and ammunition are nearly gone you are faced with the old Channel again. If you’ve got something, as I had that night, you leave enemy territory with a sort of guilty conscience—somewhere you feel they’ve got it in for you and that you’re going to show up. It’s sort of nervous reaction, I suppose. The whole thing seems too easy to be true. Ten to one there’s no Hun within shooting distance and the ground defences are quiet. That makes it all the worse, and generally I weep about till I’m half-way back across the Channel.

Out over the Channel you can hear your ground station calling the other aircraft of the squadron and you count the minutes and look eagerly for the coast.

At last, in the distance, you see the flashing beacon and soon you are taxiing in to your dispersal point. I dread the look of disappointment on my mechanic’s face if my guns are unfired. But if the rubber covers have been blown off, I know I’ve kept my engine before I am surrounded by the boys asking what luck I’ve had. My whole squadron—both ground crews and pilots—are as keen as mustard, and I must say they’ve put up a terrific show. Since April 1 the squadron has destroyed eleven aircraft for certain and probably three more.

The lion’s share of this total goes to my Czech Flight-Commander Kutelsonwasser (see page 746, Vol. 5). He’s a first-class pilot and has the most uncanny gift of knowing just which aerodrome the Huns are going back to. He’ll look at the map and say, “I’ll go there tonight,” and he always does.

Now, finally, a word of tribute to our aircraft and those who make them. I fought with Hurricanes in the Battle of Britain, in Malta and in Libya, and I’m still as good as ever. For the kind of night work on which we’re engaged we couldn’t wish for a more reliable and effective aircraft.

What the Americans Told Me About Midway

These first eye witness stories of the Japanese defeat in the sea and air battles off Midway Island on June 3 and 4 were told to Reuter’s correspondent by American participants in the action.

That afternoon the Army bombers made the first contact with the enemy far west of Midway. They sent in two groups of five friends to attack the Japanese battle fleet from a very high altitude. Colonel Sweeney, who led the group, said:

"We first made contact with the enemy on the islands of the Pacific on June 3. There were over twenty ships in columns with the big ships in the centre. We circled westward and came in with the sun at our backs. As the Japs sighted us they immediately deployed, each ship turning individually and trying frantically to avoid attack. We were at medium altitude over the clouds, and we found the anti-aircraft fire more accurate than we had anticipated. We picked out the biggest ships as targets and laid our bombs in a pattern. After the next day we hopped off for another attack on the same force, but soon got orders to attack another and larger force. We found them.

There was a big battle line with destroyers outside them, cruisers, then battleships, and away at the back, carriers. The ships
started frantic manoeuvres, but our pattern of bombs blanketed a carrier. A few Zeros who came up showed faint-heartedness.

"We returned to Midway, reloaded, and were over the enemy again at 4 p.m., when we found a carrier and a capital ship lying dead without headway and burning. We then got a heavy cruiser. High-level bombing is effective in attacks like these. Nothing can escape us since we can lay bombs in patterns which no ship can avoid."

Another vivid eye witness story of the sea and air battle was told me by Ensign Gay, 25-year-old torpedo-plane pilot. On June 4 he came upon three Japanese carriers with less than ten miles between the first and last, protected by a great screen of destroyers and cruisers. Two of the carriers were of the Kaga class—the only two known to exist of these massive 26,900-ton giants which carry 50 to 60 planes. One of the carriers was blazing fiercely as Gay arrived, and the other two were taking on their planes.

Gay launched a torpedo at a Kaga carrier before being shot down at 11 a.m.; his machine-gunner and wireless operator were killed, but he managed to "pancake" his plane on the sea and to extricate himself from the wreckage. He recovered a rubber life-raft, and from this he saw something of the terrific battle.

U.S. bombers screamed into action, hurling bombs at the vulnerable Japanese ships. Gay saw the other two carriers squarely hit. Tremendous fires burst from the vessels, and great billows of smoke churned up, with flames shooting out from the tips of the black columns. Every few minutes explosions inside the burning carriers sent new gushes of smoke belching upwards. One of the Kaga class ships was certainly a total loss, while the last one saw of the other carriers was as they were being pursued by U.S. forces.

As the afternoon drew to a close the Japanese made frantic efforts to help the remaining giant carrier. A cruiser tried to come alongside, but seemed unable to get close enough, so she opened up with her big guns, presumably to scuttle her. Some time later a destroyer managed to get close enough to take off survivors still on board.

All this time Japanese planes were hovering in the air above, with nowhere to land but in the sea or on the blazing decks of their smashed carrier. They would pass over the carrier, soar out of sight, and then come back again in a sort of hopeless desperation. Night fell, and the stranded planes were swallowed up in darkness.

Crouched in his rubber boat, Gay saw great glowing patches in the sky which he guessed to be searchlights of Japanese rescue ships looking for survivors from the wrecked carriers. Three times he heard violent explosions which he believed may have been demolition charges.

Then, several hours after the sun rose, a U.S. navy patrol plane rescued him. As he flew back to the base, Gay told me, the sea could be seen covered with patches of oil and littered with empty Japanese rafts.

The whole story is one of the cool courage and firm determination of young Americans who fought until dizzy from lack of sleep and did things with their planes that the machines had never been built to do.

---

**The Germans Caught Me As I 'Snapped' Them**

A Scot photographer who was captured by the Germans in Libya and escaped after a short stay in the enemy lines, told the following story—so typical of the confused desert war—of his adventures.

**I** was captured when the lorry in which I was riding found itself among a German armoured column. At first I thought the Germans were prisoners, and I began to take photographs of them—until firing began. One of the men in the back of the lorry shouted that there was a German armoured car firing on us. We soon found that a tank was also firing at us, and machine-guns appeared to be spitting fire everywhere. We jumped out and took cover, but we were too late and were captured.

We were taken to the headquarters of this German column, which numbered about 200 vehicles, consisting of armoured cars, a few tanks, burros full of infantry and scores of scout cars. One of the German N.C.O.'s gave me an Italian cigarette and, when the tobacco began to fall out, remarked: "It's just like the Italians—no good." Others told me they would be in Tobruk on May 27, and said: "We have Churchill by the throat this time."

A German lieutenant ordered me to accompany him into the desert—a 40-mile trip which I didn't appreciate, as we were in the van of advancing artillery and armoured cars. We were met by a heavy hail of artillery fire when going down an escarpment, and I noticed that two of the enemy vehicles were destroyed. When we arrived at the bottom of the next escarpment we were numbered and told to keep away from the unit. The lieutenant said that anyone attempting to escape, or having a weapon or live rounds of ammunition in his pocket would be shot.

Later, the artillery fire from the British troops became extremely accurate, and all the vehicles which had been captured with us were rushed forward. An officer armed with a tommy-gun was left to look after the prisoners.

Then the shooting became dead accurate, and the prisoners were left to themselves. Several, including myself, landed in the welcome safety of a silt trench, where we lay dozing for three hours. Some Germans stopped and looked at us, but, thinking we were dead, passed on.

When it was dark enough I managed to collect about 50 other ranks and found a pocket compass. This, however, was not very accurate, and we had to depend on the moon for our direction. With a halt of ten minutes in every hour, we walked 25 miles and eventually struck the main Tobruk-Bardia road—and safety. —Reuters.
Our voyage to the French coast was uneventful. Weather conditions were perfect, with the sun setting from the setting sun flooding a calm sea. The Commandos, wearing shorts and stockings, and with their toggle ropes round their waists and smokehats quietly in the assault boats talking in whispers. As we neared the French coast searchlights were switched on and swung low over the sea. We had only a minute or two between the lawn mowers, the German masts being just visible across the sands point-blank at a fellow gunpost. The Commandos were able to get off the beach quickly without their reconnaissance and gather the information which they were there to seek. Two searchlights were switched on by the defending German machine guns and directed their fire against the assault craft lying off, obviously with the object of preventing the re-embarkation of the troops.

The Army commander who led the assault up the beach ordered the withdrawal after the Commandos had completed their task, a single bugle note ringing out above the rattle of machine-guns and rifle-fire. Immediately the Commandos began to make their way back to the boats, the last party to leave consisting of a lieutenant and half-a-dozen men. Under cover of a smokescreen the troops were re-embarked and made their way out to sea with the German defences still firing wild and sporadic bursts at the diminishing targets.

After putting out a mile off-shore, it was decided that, in order to ensure that no one had been left behind, one of the craft should put back to the beach for a final look round. Finding no one waiting on the beaches, the commander of this craft decided to enjoy a Partisan shot with long letters of type from Bren guns and every other type of ammunition aboard.

This craft had only just left the beach when in the brilliant moonlight we suddenly spotted R.A.F. machines overhead diving low to the shore, and a series of heavy explosions followed as they dropped their bombs all along the foreshore and in about the defences. Shortly after dawn, as we were making our way from the French coast, we saw a series of taxi-landings of the water towards us, and for the remainder of the voyage home the R.A.F. fighters continually circled the convoy. One or two deragusting machine guns were attached to these and were made the object of a sudden swoop by four Messerschmichts which attempted to dive-bomb and machine gun the enemy aircraft. The enemy aircraft were met with a fusillade of fire from the boats and after a furious battle from the air... From this point, however, the return voyage to a South Coast port was without incident. Small crowds gathered at the port and watched the Commandos come ashore and drive to their billets.

JUNE 10, 1942, Wednesday 1.10th day
Russian Front.—In Kharkov sector 5th Army passed on to attack. Mediterranean.—R.A.F., raided Taranto and Crete by night. Africa.—Garrison of Bir Hacheim was lifted by Gen. N. The Commandos had actually established themselves on the fore shoal thai the German defences opened fire, following upon the firing of a white light which illuminated the beach and threw a spotlight on the Commandos racing towards the dunes. The defences tried to set up a cross-fire, but, in the end, tracer bullets from one German machine gun could be seen stroking across the sandpits point-blank at a fellow gunpost. The Commandos were able to get off the beach quickly without their reconnaissance and gather the information which they were there to seek. Two searchlights were switched on by the defending German machine guns and directed their fire against the assault craft lying off, obviously with the object of preventing the re-embarkation of the troops.

Home.—More U.S. troops arrived in N. Ireland, escorted by U.S. naval forces.
JUNE 14, Sunday 1.08th day
Africa.—Troops round Acroma and Isla affiliated Division covered with sub. from Gazala of S. African Division and 35th Division.
Asia.—Japs from Chekiang arrived in Kiangsi.
Australia.—Jap bombers and fighters intercepted off Darwin. Allied bombers raid Sibah and Salamaua. General.—Four Jap bombers made a low level landing in Burma.
JUNE 15, Monday 1.07th day
Russian Front.—Fierce fighting round Kharkov and Sebastopol. Mediterranean.—In air attacks on Italian fleet convoy westbound convoy. Jap submarine sank battleship cruiser and 22 enemy aircraft shot down. Mediterranean.—Excessive damage on Darwin by 27 Jap bombers. Allied bombers attack Kupang, Lao and Dutch East Indies. General.—Argentine and Chile warned by Germany that vessels entering N. Atlantic blockade zone after June 26 do so at their own risk.
JUNE 16, Tuesday 1.08th day
JUNE 17, Wednesday 1.09th day
Air.—Submarine base at St. Nazaire bombed by night.
Russian Front.—Fierce attacks on Sebastopol repelled. Mediterranean.—R.A.F. bombed Sevastopol.
Africa.—Our forces withdrawn from El Adem operations. Mediterranean.—Port Moresby attacked by 18 Jap bombers.
JUNE 18, Thursday 1.09th day
Air.—Preliminary announcement of H.M. minesweeper Fitzroy.
Russian Front.—Jap forces repelled on position in Turkish frontier and Tobruk.
Australia.—Port Moresby raided by 15 Jap bombers. General.—Mr. Churchill arrived in U.S.A. for discussions with President Roosevelt.
Europe.—German announcement that two men who shot Heydrich had been captured and executed.
JUNE 19, Friday 1.10th day
Air.—Invasion of Kiska island has been launched. Mediterranean.—In air attacks on Italian fleet convoy westbound convoy. Russian Front.—Soviet 12th Army repelled at Kupang, Lao and Dutch East Indies. General.—Argentine and Chile warned by Germany that vessels entering N. Atlantic blockade zone after June 26 do so at their own risk.
JUNE 20, Saturday 1.10th day
Air.—Docks at Le Havre bombed by night. Strong force of bombers raided Emden by night.
Mediterranean.—Targets in Crete destroyed by seven aircraft.
Africa.—Enemy destroyed Tobruk perimeter in great strength and penetrated the defences. Enemy bombers attacked Egyptian coast between Sidi Barrani and Fuka.
Burma.—R.A.F. bombed Akyab and Mawla.
Australia.—Admiralty announced that H.M. submarine had sunk three Jap supply ships in Strait of Malacca. Allied bombers again raided Rabaul and Lae.
General.—Telegraph Station at Esta-

A little lunch in wartime. Noted at a
restaurant just a week before rationing.
Lunchers: two very ordinary-looking persons, a
young woman of no particular distinction and an
indeterminate dark blue uniform, young man,
rather foreign ("if you know what I mean") in appearance.
Began with cock-
tails or sherries (say 5s. each, half cold lobster, 7s. 6d. each, fresh
peaches, 5s. 6d. each, coffee, and quite
possibly brandies to follow, but I had to leave before they had introduced the
conscious conclusion, though not without having seen
them empty a large bottle of white burgundy (28s.). Total of lunch, including table money (tip, much cheaper)
and brandies followed, say £4 5s. 6d. A bit
thick? Hence need for rationing.

These sour-stomached and self-appointed mentors of our symmetrical, square
noses, sailors, airmen—these valiants of the pen who know everything,
but, being internationally minded, suddenly feel the need to encourage a belief in the modest
merits of their more numerous but less intelligent fellow countrymen, are bemused by their best in their gloomy little
circles to belittle Britain's new efforts. The raw-Colonial
aid Cologne with a thousand planes in 90 minutes doesn't please
them at all, as they sip their weak tea and munch their
buns in blithe ignorance.

"With this technique, accuracy of aim must have been sacrificed
to indiscriminate bombing," so
means a melancholy commentator in The New States-
man. The photographs taken by the R.A.F. to illustrate the results of their historic Cologne raid
do not confirm this criticism of our bomber
squadrons. From the Yorks rivals Mr. Churchill can always
give some sage advice on how to
do his job.

Dear Mr. Newsagent—I am
afraid that you do not
always read this postcard, and
I am not always 
our publishing
department
inform me that
although I drew attention to the
necessity for newsagents to avoid writing names and addresses of customers on the
front page of The War Illustrated, this is too common. And, by difference, of course, to subscribers who do
not intend to have their fortnightly Parts bound into volume form, but it is a very
pressing matter. The point of view
of the subscriber who collects the loose Parts
for binding purposes, as the outer pages are
now designed for binding in the volume and
ought to be preserved as such is at least possible.
Indeed, it seems to me that a subscriber has the right to insist that his name and address be written in ink in pencil on any part of the
publication merely to suit his own conveni-
ence in distributing. A number of cases
in which the subscriber has written his name and
address in pencil on any part of the
publication have been reported to us, and
that seems to me quite inexcusable. Do
please oblige our publishers by bearing this in
mind.

Section Postscript

No matter how much one may agree with the
published opinions of anyone, if, on occasion, one finds him writing nonsense
or advocating a questionable course of action, we have the
duty to refrain from doing so, the old
standards of conduct abroad in Canada and the United States; that without the free
gift of sustenance from these sons and brothers and cousins we should today be in
the same condition as bad as Greece, but getting very near
it? Can it be that we have
not known the spirit of
independence, or that we are
so saturated with the mentality of
doing things and slavery has become such a
principle as to eat from the
hand of charity without a thank
you note? Or was it that they had
nothing to do, or how they might escape from that position? I declare altogether to
believe it.

I am glad Sir Ernest Benn
accepts the preposterous
proposition which he presents to us (like the ghost in Hamlet) in
an unanswerable question. For it is quite at variance with the spirit that is claimed to
inform the journal which gave it
print. It might be true. The
only question is, if there were any measure of
truth in it! Britain is the
advocate of freedom, but it is not necessarily true that
there are any measures of
true freedom. If freedom is a mean to an end, Britain is not
advocate of freedom. If freedom is a mean to an end, Britain is not
advocate of freedom. If freedom is a mean to an end, Britain is not
advocate of freedom.

It is absurd to expect an
answer to this real question. Britain has (so far)
saved the two Americas, Australia, and every country
wherever there is a right to
work for freedom, by her own
stupendous efforts since the fall
of France, and every ounce of
energy, every penny of financial
help that America and the
British Dominions can contribute
to this tremendous task of resisting the
organised might of the dictatorships is more than the charity that begins at home: it
is needed less for their own protection and
survival than for Britain's. Had Britain (as the military leaders of France anticipated) not
lost the battle of the Five
Continents and that madman's dream of
Germanic world-conquest might well have
come to pass, or the Hundred Years' War
that Janurus (see p. 10) I would now be dragging on with little hope of
the eventual triumph of the democratic
peoples.

At the outset of the praiseworthy
campaign of paper-saving and the
surrender of old printed matter for re-pulp ing, a
worthy object. It was the duty of the local
told his townfolk that only two books were
needed in any home—"Your Bible and your bank book." Why didn't he go the whole
 hog and say that any book other than a bank
book was sheer luxury I can attribute only
to the old Scottish superstition that
the Bible is printed acquires a measure of holiness, yet the Scots
have risen to greatness largely because of
their readiness to follow a logical argument no matter where it leads them. I thought
of that Scottish magistrate ("I'm no
a man, I'm a magistrate") is a historic Scots
rebel) when quite recently the English
town council expressed the great idea of dedicat-
ing a mile of old books to the Salvage drive,
and the ceremony began with the Mayor's
placing an old family Bible on the ground as
the first item in the mile-long offering of

Volume Five of THE WAR ILLUSTRATED (comprising Nos. 101 to 130 inclusive) is now completed and
subscribers can have their copies bound by the Publishers at the following prices:

STANDARD STYLE—6/6 each volume (2/6 for the binding case and 4/- for binding and return carriage).

DE LUXE STYLE—11/- each volume (6/6 for the case and 4/- for binding and return carriage).

If you would like us to undertake the binding, send your loose
copies (which must be in good condition) by Parcel Post to
"The War Illustrated," Binding Department, Bear Alley, Farrin-
don Street, London, E.C.4, enclosing your name and address.

Remittance to cover should be posted separately, mentioning the
actual parts being sent for binding. Cheques and P.O.1 should be made payable to The Amalgamated Press Ltd.
and crossed "& Co." No responsibility can be accepted for money
lost through being enclosed in the parcel.

If you hand your copies to a Newsagent for dispatch to us, you
must send them in a form which will be liable for the cost of carriage on parts sent to us in this manner.

Owing to the rise in the cost of labour, etc., we are compelled to
make a small increase of 6d. on our binding charges; this increase is included in the above prices and applies to all volumes of
THE WAR ILLUSTRATED.

Subscribers who wish their volumes to be bound locally can purchase our binding cases through their Newsagent at the following prices:

STANDARD in dark red cloth, 2/6 each.

DE LUXE in dark blue half leather, 6/6 each.

If ordered direct from the Publishers 7d. extra must be included for postage.

Title pages and complete index (16 pages) together with FREE
ART PLATE of General Chiang Kai-shek as frontispiece to the volume are given without charge.

The prices mentioned above apply only to Great Britain and Northern Ireland.

Readers in Eire will be liable for any import duties.
