

Assessment Document, the peer review comments, and comments from the Petitioners and Intervenor are available in the docket for this notice. The purpose of this notice is specifically to request comment on the Assessment Document.

Elsewhere in today's **Federal Register**, the Agency is proposing revisions to the MDL definition and procedure codified at 40 CFR part 136, Appendix B, and is also proposing to add a definition of the ML at 40 CFR 136.2. The proposed revisions are based on the findings from the assessment and are fully discussed in the proposed rule. To comment on these proposed revisions, readers are referred to the Proposed Rules section of today's **Federal Register** for the Guidelines Establishing Test Procedures for the Analysis of Pollutants; Procedures for Detection and Quantitation.

The settlement agreement stipulates that EPA's assessment of concepts and procedures for detection and quantitation be submitted for public review and comment for a period of no less than 120 days. The settlement agreement also requires EPA to sign a final notice taking action on the assessment on or before September 30, 2004. By this notice, EPA invites the public to comment on the Assessment Document. The public comment period is open for 120 days and will close on July 10, 2003.

After EPA considers public comments, it will publish a notice taking final action on the assessment by September 30, 2004.

Dated: February 28, 2003.

Christine Todd Whitman,
Administrator.

BILLING CODE 6560-50-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 600

[I.D. 022403D]

Magnuson-Stevens Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permits (EFPs)

AGENCY: Department of Commerce, National Oceanic and Atmospheric Administration (NOAA), National Marine Fisheries Service (NMFS)

ACTION: Notification of a proposal for EFPs to conduct experimental fishing; request for comments.

SUMMARY: The Administrator, Northeast Region, NMFS (Regional Administrator) has made a preliminary determination that the subject EFP application contains all the required information and warrants further consideration. The Regional Administrator has also made a preliminary determination that the activities authorized under the EFPs would be consistent with the goals and objectives of the Northeast (NE) Multispecies Fishery Management Plan (FMP). However, further review and consultation may be necessary before a final determination is made to issue EFPs. Therefore, NMFS announces that the Regional Administrator proposes to issue EFPs that would allow four vessels to conduct fishing operations that are otherwise restricted by the regulations governing the fisheries of the Northeastern United States. The EFPs would exempt these vessels from minimum mesh size requirements of the Gulf of Maine (GOM) and Georges Bank (GB) Regulated Mesh Areas (RMAs) and from the seasonal GOM Rolling Closure Areas II and III. The proposed experiment would test a separator panel designed to separate haddock from cod in the GOM and GB RMAs. All experimental work would be monitored by Manomet Center for Conservation Sciences (Manomet) personnel. Regulations under the Magnuson-Stevens Fishery Conservation and Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed EFPs.

DATES: Comments must be received at the appropriate address or fax number (see **ADDRESSES**) on or before March 27, 2003.

ADDRESSES: Written comments should be sent to Patricia A. Kurkul, Regional Administrator, NMFS, NE Regional Office, 1 Blackburn Drive, Gloucester, MA 01930. Mark the outside of the envelope "Comments on Manomet Separator Trawl EFP Proposal." Comments may also be sent via fax to (978) 281-9135. Comments will not be accepted if submitted via e-mail or the Internet.

FOR FURTHER INFORMATION CONTACT: Heather Sagar, Fisheries Management Specialist, 978-281-9104.

SUPPLEMENTARY INFORMATION: An initial application from Manomet was received on December 6, 2002, and the application was completed on January 31, 2003. The proposed study would test a modified trawl net with a separator panel, designed to separate haddock from cod. The modified net would be built with a 4-inch mesh horizontal separator panel dividing the

trawl codend into an upper and lower codend. Both codends would be constructed with legal minimum mesh size and the net would be fully compliant with current regulations except for the insertion of a small mesh separator panel. The study would involve four phases. The first phase would consist of development and construction of a separator trawl net. Phase two would involve a series of sea trials conducted with an underwater video camera to ensure that the trawl and separator panel are fishing properly. Trials would take place in shallow water to ensure high quality video imaging. This process would take up to 2 days. Phase three would be the experimental sea trials. Four commercial vessels would fish 5 days each, making approximately five tows per day for a total of 100 tows for this portion of the study. Tow length would be approximately 30 minutes and experimental tows would mimic normal fishing practices. This would result in a total of 22 sea days for the entire study (including 2 days for preliminary sea trials). Participating vessels would be required to notify NMFS prior to commencing an experimental fishing trip. The final phase of the experiment would be data analysis and reporting, including a video analysis.

The proposed study area would take place off the coast of Cape Cod, MA, inside the area defined by the following coordinates: 42°15' N. lat., 70°15' W. long.; 42°15' N. lat., 69°30' W. long.; 42°00' N. lat., 69°30' W. long.; 42°00' N. lat., 68°30' W. long.; 41°30' N. lat., 68°30' W. long.; 41°30' N. lat. 70°00' W. long. following the Cape Cod shoreline north to 42°00' N. lat., 70°00' W. long.; 42°00' N. lat., 70°15' W. long.; and 42°15' N. lat., 70°15' W. long. Areas subjected to permanent closures would be avoided. The EFPs would allow for exemptions from the GOM and GB RMA minimum mesh size requirements specified at 50 CFR 648.80(a)(1) and (a)(2), and seasonal GOM Rolling Closure Areas II and III specified at 50 CFR 648.81(g).

Under this experiment, target species would be cod, haddock, yellowtail flounder, American plaice, witch flounder, pollock, and windowpane flounder. Incidental species would include skate, smooth dogfish, spiny dogfish, sculpins, sea raven and sea robin. All biological and environmental information would be recorded by trained observers (supplied by Manomet) on relevant NMFS observer logbooks. Each participating vessel would have an observer on board. All catch would be sorted and weighed on board the vessel. In addition, all
