

threatened SnR steelhead; threatened UWR steelhead; threatened SnR (S/S) chinook salmon; threatened SnR fall chinook salmon; threatened LCR chinook salmon; threatened UWR chinook salmon; endangered naturally produced and artificially propagated UCR spring chinook salmon; threatened naturally produced and artificially propagated PS chinook salmon; threatened OC coho salmon; and threatened SONCC coho salmon associated with research designed to assess species status and trends in randomly selected river systems in Oregon, Washington, and Idaho. The EPA intends to conduct annual surveys for fish, macroinvertebrate, algae, and microbial assemblages as well as physical and chemical habitat conditions in randomly selected river systems in Oregon, Washington, and Idaho. Listed fish will be captured by electrofishing (using backpack or raft-mounted gear), sampled for biological information, and released. The research will benefit the listed species by providing baseline information about water quality in the study areas and will also support enforcement of the Clean Water Act in those river systems where listed fish are present. Dynamac Corporation, U.S. Geological Survey Biological Resources Division, Idaho Department of Environmental Quality, and Washington Department of Ecology will be cooperators in the proposed EPA research. The EPA requests the cooperators' biologists be authorized as agents of the EPA in conducting the research.

#### *Permit 1205*

The Oregon Department of Environmental Quality (ODEQ) in Portland, OR requests a 5-year permit for annual take of juvenile threatened SnR (S/S) chinook salmon; SnR fall chinook salmon; and SONCC coho salmon associated with research designed to assess the condition of randomly selected streams in Southwestern and Northeastern Oregon. The research involves stream vertebrate surveys that are part of a monitoring program that evaluates the chemical, biological, and habitat conditions of streams on a regional basis. ODEQ's research implements the Oregon Plan and is coordinated with the Oregon Department of Fish and Wildlife and the EPA. ODEQ would capture listed juvenile salmonids using backpack electrofishing, sample them for biological information, and release them. The research will benefit the listed species by providing baseline information to support enforcement of

the Clean Water Act in freshwater river systems where listed fish are present.

#### *Permit 1410*

The NWFSC in Seattle, WA requests a 5-year permit for annual take of adult and juvenile listed fish. The NWFSC proposes to investigate the distribution, abundance, condition and health of juvenile salmon in relation to physical and biological oceanographic conditions in the Columbia River plume and surrounding ocean environment to better understand factors controlling estuarine and marine survival. The study will provide information to help predict and forecast survival potential as a function of easily measured indices of plume and ocean conditions. Further, the information will help hydropower operators develop a set of hydropower management scenarios that could benefit survival, growth, and health of juvenile salmon by changing the dynamics of the Columbia River plume. Listed fish will be collected with purse seines and trawl nets, sampled for biological data, and released. The NWFSC also requests authorization to lethally take salmon for endocrine assessments, genetic stock identification, pathogen prevalence and intensity, otolith and stomach content analysis, and histopathological attributes.

#### **Modification Requests**

##### *Permit 1309—Modification 2*

The King County Department of Natural Resources and Parks (KCDNRP) in Seattle, WA requests a modification to permit 1309 for increased annual take of juvenile threatened naturally produced PS chinook salmon associated with its current study examining the behavior of juvenile chinook and other salmonids in the Green and Duwamish Rivers and adjacent nearshore areas in the State of Washington. The study will provide information about natural chinook salmon growth, timing of migration, feeding, life history types and interactions with hatchery salmon. Resource managers will use the information to take short-term conservation measures as well as to establish a baseline to gauge the long-term effectiveness of ESA recovery actions. In addition, the KCDNR requests authorization to lethally take PS chinook salmon for otolith and diet analysis and to capture listed fish using a screw trap.

##### *Permit 1315—Modification 2*

The U.S. Army Corp of Engineers Seattle District (COE) requests a modification to permit 1315, which

authorizes annual take of PS chinook salmon under several studies. The COE is proposing to micro-acoustic tag naturally produced PS chinook salmon associated with an ongoing investigation of fish passage conditions at the large lock chamber of the Hiram M. Chittenden Locks and Lake Washington Ship Canal in the State of Washington. The study will identify effects on salmonids in the Lake Washington Basin and help researchers (1) identify limiting factors contributing to smolt survival, (2) develop smolt survival estimates, and (3) assess restoration measures to improve smolt survival.

Further, the COE is requesting annual take of juvenile naturally produced PS chinook salmon associated with a new study which will provide it and the city of Seattle with information on salmonid nearshore habitat use in Lake Washington and the Lake Washington Ship Canal. The information will help (1) determine the relationship between habitat use and shoreline development, (2) guide the city's habitat restoration efforts to improve habitat conditions, (3) help predict the effects of modifications to salmonid habitat, and (4) aid Lake Washington area municipalities with their shoreline management programs. Listed fish would be captured by beach seine, anesthetized, sampled for biological information and stomach contents using non-lethal evacuation, tagged/marked, and released.

This notice is provided pursuant to section 10(c) of the ESA. NOAA Fisheries will evaluate the applications and modification requests, associated documents, and any comments submitted to determine whether the applications and modification requests meet the requirements of section 10(a) of the ESA and Federal regulations. NOAA will not make any final determinations until after the end of the 30-day comment period. NOAA Fisheries will publish notice of its final action in the **Federal Register**.

Dated: March 11, 2003.
