

BILLING CODE 4310-55-C

Molokai A1

This unit was proposed as critical habitat for three species: *Centaurium sebaeoides*, *Marsilea villosa*, and *Tetramolopium rockii*. We excluded the proposed critical habitat for *Centaurium sebaeoides*, a multi-island species. This area is not essential for the conservation of *Centaurium sebaeoides* because it lacks one or more of the primary constituent elements, has a lower proportion of associated native species than other areas we consider to be essential to the conservation of *Centaurium sebaeoides*, and is not currently managed for conservation of this species. In addition, there are at least 10 other locations that have been identified to meet the recovery goal of 8 to 10 populations throughout its historical range on Molokai and other islands. Habitat also exists on Molokai for *Centaurium sebaeoides* within Moomomi Preserve. The area designated as critical habitat for *Tetramolopium rockii* provides habitat within its historical range for one population.

This modification resulted in the reduction from 472 ha (1,167 ac) to 68 ha (167 ac). This unit was renamed Molokai 1—*Tetramolopium rockii*—a.

In the April 5, 2002, revised proposal, we stated that there was critical habitat for *Marsilea villosa* within Molokai A1. Upon further inspection, we discovered that the actual areas that contain the suitable habitat for this species were inadvertently left out of the proposed unit Molokai A1. We are unable at this time to publish proposed critical habitat for *Marsilea villosa* in this final rule. Critical habitat is proposed for this species on the island of Oahu. We plan to publish a proposed rule to designate critical habitat for *Marsilea villosa* on Molokai subsequent to publication of this final rule for 41 plants on Molokai.

Molokai A2

This unit was proposed as critical habitat for three species: *Centaurium sebaeoides*, *Sesbania tomentosa*, and *Tetramolopium rockii*. This area is not essential for the conservation of *Centaurium sebaeoides* because it lacks one or more of the primary constituent elements, has a lower proportion of

associated native species than other areas we consider to be essential to the conservation of *Centaurium sebaeoides*, and is not currently managed for conservation of this species. In addition, there are at least 10 other locations that have been identified to meet the recovery goal of 8 to 10 populations throughout the historical range on Molokai and other islands. Habitat also exists on Molokai for *Centaurium sebaeoides* within Moomomi Preserve. The areas designated as critical habitat for *Tetramolopium rockii* and *Sesbania tomentosa* provides habitat within their historical range for one population of each species.

This modification resulted in the reduction from 1,532 ha (3,786 ac) to 131 ha (325 ac). This unit was renamed Molokai 2—*Sesbania tomentosa*—a and Molokai 2—*Tetramolopium rockii*—b.

Molokai B1

This unit was proposed as critical habitat for 18 species: *Adenophorus periens*, *Brighamia rockii*, *Centaurium sebaeoides*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea dunbarii*, *Cyanea grimesiana* ssp. *grimesiana*, *Cyanea*
