SUPPLEMENTARY INFORMATION:

I. Abstract

The procedures in question are designed for Western Alaska Community Development Quota (CDQ) catcher/processors and American Fisheries Act (AFA) catcher/processors and AFA motherships and involve catch weighing, observer sampling stations, and observer coverage requirements. This existing information collection would be revised to incorporate catch-weighing requirements for AFA inshore

processors (shoreside processors and stationary floating processors).

NMFS must be able to ensure that the total weight, species composition, and catch location for each delivery are reported accurately. This is accomplished through a catch-monitoring system that: allows for independent verification of catch weight, species composition and haul location data; ensures that all catch is weighed accurately; and provides a record of the weight of each delivery that may be audited by NMFS. Requirements include approval of scale types for use, inspection requests, scale tests, an inshore processor catch monitoring and control plan, and printed output from scales.

II. Method of Collection

Forms may be e-mailed, FAXed or submitted in paper form. The daily scale test forms and scale printed output are paper forms that are not submitted to NMFS.

III. Data
