

grant of the request would result in public interest benefits, such as making new or expanded public safety or other wireless services available to consumers or deploying wireless service to rural or other underserved communities. The Commission intends to weigh these benefits against any likely public interest costs, such as the loss of any of the four stations in the designated market area with the largest audience share, the loss of the sole service licensed to the local community, the loss of a community's sole service on a channel reserved for noncommercial educational broadcast service, or a negative effect on the pace of the DTV transition in the market.

18. Subsequent to the adoption by the Commission of its voluntary clearing policy, the Auction Reform Act of 2002 was enacted. One provision of this legislation restricts the Commission's authority to waive certain broadcast interference standards and the minimum spacing requirements for certain proposals to relocate Channel 52–69 analog operations to a Channel 2–51 DTV allotment, if such waiver “will result in any degradation in or loss of service, or an increased level of interference to any television household except as the Commission's rules would otherwise expressly permit, exclusive of any waivers previously granted.”

#### b. Canadian and Mexican Border Regions

19. The United States has bilateral agreements with both Canada and Mexico setting forth allotment and assignment plans for TV broadcast stations covering the 698–746 MHz band (Channels 52–59). While the U.S. has identified this band for reallocation to new services, neither Canada nor Mexico has done so to date. Pursuant to these agreements, the U.S. must protect the signals of Canadian and Mexican TV broadcast stations located in the border areas, and such operations will therefore affect U.S. non-broadcast use and services in this band. Accordingly, licenses issued for this band will be subject to whatever future agreements the U. S. develops with these two countries. Furthermore, until such time as existing agreements are replaced or modified to reflect the new uses, licensees in the band will be subject to existing agreements and the condition that harmful interference not be caused to, and must be accepted from, television broadcast operations in those countries.

#### iv. Due Diligence

20. Potential bidders are reminded that there are a number of incumbent

broadcast television licensees already licensed and operating in the 710–716/740–746 MHz and 716–722 MHz bands that will be subject to the upcoming auction. As discussed in greater detail, the Commission made clear that geographic area licensees operating on the spectrum associated with Channels 52, 53, 54, 55, 56, 57, 58 and 59 must comply with the co-channel and the adjacent channel provision of § 27.60 of the Commission's rules. These limitations may restrict the ability of such geographic licensees to use certain portions of the electromagnetic spectrum or provide service to certain regions in their geographic license areas.

21. Potential bidders are solely responsible for identifying associated risks and for investigating and evaluating the degree to which such matters may affect their ability to bid on, otherwise acquire, or make use of licenses available in Auction No. 49.

22. To aid potential bidders, the Bureau will issue shortly a Due Diligence Announcement listing incumbent licensees operating in these bands. The Commission makes no representations or guarantees that the matters listed in this Due Diligence Announcement are the only pending matters that could affect spectrum availability in these services.

23. Potential bidders also should be aware that certain applications (including those for modification), petitions for rulemaking, requests for special temporary authority (“STA”), waiver requests, petitions to deny, petitions for reconsideration, and applications for review may be pending before the Commission and relate to particular applicants or incumbent licensees. In addition, certain judicial proceedings that may relate to particular applicants or incumbent licensees, or the licenses available in Auction No. 49, may be commenced, or may be pending, or may be subject to further review. We note that resolution of these matters could have an impact on the availability of spectrum in Auction No. 49. In addition, although the Commission will continue to act on pending applications, requests and petitions, some of these matters may not be resolved by the time of the auction. To aid potential bidders, the Bureau will issue shortly a Due Diligence Announcement listing matters pending before the Commission that relate to licenses or applications in these services. The Commission makes no representations or guarantees that the matters listed in the Due Diligence Announcement are the only pending matters that could affect spectrum availability in these services.

24. In addition, potential bidders may research the licensing database for the Media Bureau on the Internet in order to determine which frequencies are already licensed to incumbent licensees. The Commission makes no representations or guarantees regarding the accuracy or completeness of information in its databases or any third party databases, including, for example, court docketing systems. Furthermore, the Commission makes no representations or guarantees regarding the accuracy or completeness of information that has been provided by incumbent licensees and incorporated into the database. *Potential bidders are strongly encouraged to physically inspect any sites located in, or near, the EAG, MSA or RSA for which they plan to bid.*

25. Licensing records for the Media Bureau are contained in the Media Bureau's Consolidated Data Base System (CDBS) and may be researched on the Internet at <http://www.fcc.gov/mb/>. Potential bidders may query the database online and download a copy of their search results if desired. Detailed instructions on using Search for Station Information, Search for Ownership Report Information and Search for Application Information and downloading query results are available online by selecting the CDBS Public Access (main) button at the bottom of the Electronic Filing and Public Access list section. The database searches return either station or application data. The application search provides an application link that displays the complete electronically filed application in application format. An AL/TC search under the application search link permits searching for Assignment of License/Transfer of Control groups using the AL/TC group lead application. For further details, click on the Help file.

26. Potential bidders should direct questions regarding the search capabilities of CDBS to the Media Bureau help line at (202) 418–2662, or via e-mail at [mbinfo@fcc.gov](mailto:mbinfo@fcc.gov).

#### v. Bidder Alerts

27. All applicants must certify on their FCC Form 175 applications under penalty of perjury that they are legally, technically, financially and otherwise qualified to hold a license, and not in default on any payment for Commission licenses (including down payments) or delinquent on any non-tax debt owed to any Federal agency. Prospective bidders are reminded that submission of a false certification to the Commission is a serious matter that may result in severe penalties, including monetary
