

marketing of Peento type peaches. When these varieties were first introduced and marketed, they were generally tray-packed because they were a novel and premium product. As production has increased, the value of the varieties has diminished in the marketplace, and some handlers have converted their tray-packed containers of Peento type peaches to volume-filled containers. Weight-count standards provide a basis for volume filling containers of other varieties of peaches. Currently, Peento type peaches are regulated under a new table of weight-count standards applicable to only these uniquely-shaped peaches.

The staff continued to conduct weight-count studies during the 2002 season so that weight-count standards could be perfected, thus ensuring that all handlers are handling a standard maximum number of peaches in a 16-pound sample. During the studies, the staff learned that all available sizes of Peento type peaches were being packed in volume-filled containers, including sizes for which there were not yet minimum weight-count standards. For that reason, modifications to Table 3 in paragraph (a)(5)(vi) of § 917.442 are made to include additional sizes 30 and 32, which are larger-sized Peento peaches.

Sections 916.356 and 917.459 establish minimum maturity levels. This rule makes annual adjustments to the maturity requirements for several varieties of nectarines and peaches. Maturity requirements are based on maturity measurements generally using maturity guides (e.g., color chips), as recommended by Shipping Point Inspection. Such maturity guides are reviewed annually by SPI to determine the appropriate guide for each nectarine and peach variety. These annual adjustments reflect refinements in measurements of the maturity characteristics of nectarines and peaches as experienced over previous seasons' inspections. Adjustments in the guides utilized ensure that fruit has met an acceptable level of maturity, ensuring consumer satisfaction while benefiting nectarine and peach producers and handlers.

Currently, in § 916.356 of the nectarine order's rule and regulations, and in § 917.459 of the peach order's rule and regulations, minimum sizes for various varieties of nectarines and peaches, respectively, are established. This rule makes adjustments to the minimum sizes authorized for various varieties of nectarines and peaches for the 2003 season. Minimum size regulations are put in place to encourage producers to leave fruit on the trees for

a longer period of time. This increased growing time not only improves maturity, but also increases fruit size. Increased fruit size increases the number of packed containers per acre, and coupled with heightened maturity levels, also provides greater consumer satisfaction, fostering repeat purchases. Such improved consumer satisfaction and repeat purchases benefit both producers and handlers alike.

Annual adjustments to minimum sizes of nectarines and peaches, such as these, are recommended by the NAC and PCC based upon historical data, producer and handler information regarding sizes attained by different varieties, and trends in consumer purchases.

An alternative to such action would include not establishing minimum size regulations for these new varieties. Such an action, however, would be a significant departure from the committees' practices and represent a significant change in the regulations as they currently exist; would ultimately increase the amount of less acceptable fruit being marketed to consumers; and, thus, would be contrary to the long-term interests of producers, handlers, and consumers. For these reasons, this alternative was not recommended.

The committees make recommendations regarding all the revisions in handling and lot stamping requirements after considering all available information, including recommendations by various subcommittees, comments of persons at subcommittee meetings, and comments received by committee staff. Such subcommittees include the Stone Fruit Grade and Size Subcommittee, the Inspection and Compliance Subcommittee, and the Executive Committee.

At the meetings, the impact of and alternatives to these recommendations are deliberated. These subcommittees, like the committees themselves, frequently consist of individual producers and handlers with many years' of experience in the industry who are familiar with industry practices and trends. Like all committee meetings, subcommittee meetings are open to the public and comments are widely solicited. In the case of the Stone Fruit Grade and Size Subcommittee, many growers and handlers who are affected by the issues discussed by the subcommittee attend and actively participate in the public deliberations. In addition, minutes of all subcommittee meetings are distributed to committee members and others who have requested them, thereby increasing

the availability of information within the industry.

Each of the recommended handling requirement changes for the 2003 season is expected to generate financial benefits for producers and handlers through increased fruit sales, compared to the situation that would exist if the changes were not adopted. Both large and small entities are expected to benefit from the changes, and the costs of compliance are not expected to be substantially different between large and small entities.

This rule does not impose any additional reporting and recordkeeping requirements on either small or large handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule. However, as previously stated, nectarines and peaches under the orders have to meet certain requirements set forth in the standards issued under the Agricultural Marketing Act of 1946 (7 CFR 1621 *et seq.*). Standards issued under the Agricultural Marketing Act of 1946 are otherwise voluntary.

In addition, the committees' meetings are widely publicized throughout the nectarine and peach industry and all interested parties are encouraged to attend and participate in committee deliberations on all issues. These meetings are held annually during the last week of November or first week of December. Like all committee meetings, the December 3, 2002, meetings were public meetings, and all entities, large and small, were encouraged to express views on these issues. These regulations were also reviewed and thoroughly discussed at a subcommittee meeting held on November 6, 2002. Finally, interested persons are invited to submit information on the regulatory and informational impacts of this action on small businesses.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at the following Web site: <http://www.ams.usda.gov/fv/moab.html>. Any questions about the compliance guide should be sent to Jay Guerber at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

This rule invites comments on changes to the handling requirements currently prescribed under the marketing orders for California fresh nectarines and peaches. Any comments
