

and Budget for review under the Paperwork Reduction Act of 1995:

Proposed Project: Design for the Evaluation of the Maternal and Child Health Bureau, Bright Futures for Women's Health and Wellness Initiative and Preliminary Evaluation of Initial Products—New

The HRSA Office of Women's Health (OWH) is developing the Bright Futures for Women's Health and Wellness (BFWHW) Initiative to help expand the scope of women's preventive health activities, particularly related to nutrition and physical activity. A pilot test of the BFWHW health promotion

tools and materials will be conducted in order to improve the effectiveness of the tools themselves, and to gather feedback on productive strategies for disseminating the tools for appropriate use to training providers and community organizations. Thus, the empirical findings from this pilot test will help shape the final BFWHW tool development. This data collection effort will ensure that the HRSA OWH develops targeted and effective tools for translating health prevention recommendations into nutrition and physical activity messages.

Toward this end, data will be collected from women patients,

providers, and representatives of community organizations. Women patients ages 18 and over of various racial and ethnic backgrounds will complete questionnaires at three health centers in different geographic areas of the country. The health care providers at these same sites will also be asked to complete a brief questionnaire. Telephone interviews will be completed with representatives from community organizations located in the service areas of these health centers. The data collection period is estimated to last three weeks.

The estimated response burden is as follows:

Questionnaire	Number of respondents	Responses per respondent	Total responses	Minutes per response	Total burden hours
Woman Patient	2,400	1	2,400	5	200
Provider	18	1	18	5	1.5
Administrator	3	1	3	45	8.25
Total	2,421	2,421	203.75

Written comments and recommendations concerning the proposed information collection should be sent within 30 days of this notice to: John Morrall, Human Resources and Housing Branch, Office of Management and Budget, New Executive Office Building, Room 10235, Washington, DC 20503.

Dated: April 7, 2003.

Jane M. Harrison,

Director, Division of Policy Review and Coordination.

National Institutes of Health

Submission for OMB Review; Comment Request: Electroencephalogram (EEG) and Event-Related Potential (ERP) Intermediate Phenotypes for Alcoholism in a Low Prevalence American Indian Tribe

Summary: Under the provisions of section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institute on Alcohol Abuse and Alcoholism (NIAAA), the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request to review and approve the information collection listed below.

This proposed information collection was previously published in the **Federal Register** on October 16, 2002, page 63934 and allowed 60-days for public comment. No public comments were received. The purpose of this notice is to allow an additional 30 days for public comment. The National Institutes of Health may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Proposed Collection: Title: Electroencephalogram (EEG) and Event-Related Potential (ERP) intermediate phenotypes for alcoholism in a low prevalence American Indian tribe. **Type of Information Collection Request:** New. **Need and Use of Information Collection:** An extensive data set has already been collected by the Laboratory of Neurogenetics, NIAAA, on 294 members of a Southeastern American Indian tribe. We propose to re-contact these individuals to collect additional information. Approximately 100 of the original participants were originally selected as a representative sample of the population. The remaining 194 individuals are family members of alcoholic probands from the population sample. We propose to expand the study to collect (a) measures of intermediate phenotypes for alcoholism and (b) survey-based selected personality characteristics from the same tribal members, Intermediate
