

pursuant to section 408(d)(4). Pursuant to this request, on February 1, 2005, when the IRA is worth \$7,600, the IRA trustee distributes to Taxpayer A the \$400 plus attributable net income. During this time, no other contributions have been made to the IRA and no distributions have been made.

(ii) The adjusted opening balance is \$6,400 [\$4,800 + \$1,600] and the adjusted closing balance is \$7,600. Thus, the net income attributable to the \$400 May 1, 2004, contribution is \$75 [\$400 × (\$7,600 – \$6,400) ÷ \$6,400]. Therefore, the total to be distributed on February 1, 2005, pursuant to § 408(d)(4) is \$475.

Example 2. (i) Beginning in January 2004, Taxpayer B contributes \$300 on the 15th of each month to an IRA for 2004, resulting in an excess regular contribution of \$600 for that year. Taxpayer B requests that the \$600 excess regular contribution be returned to her pursuant to section 408(d)(4). Pursuant to this request, on March 1, 2005, when the IRA is worth \$16,000, the IRA trustee distributes

to Taxpayer B the \$600 plus attributable net income. The excess regular contributions to be returned are deemed to be the last two made in 2004: the \$300 December 15 contribution and the \$300 November 15 contribution. On November 15 the IRA was worth \$11,000 immediately prior to the contribution. No distributions or transfers have been made from the IRA and no contributions or transfers, other than the monthly contributions (including \$300 in January and February 2005), have been made.

(ii) As of the beginning of the computation period (November 15), the adjusted opening balance is \$12,200 [\$11,000 + \$300 + \$300 + \$300 + \$300] and the adjusted closing balance is \$16,000. Thus, the net income attributable to the excess regular contributions is \$187 [\$600 × (\$16,000 – \$12,200) ÷ \$12,200]. Therefore, the total to be distributed as returned contributions on March 1, 2005, to correct the excess regular contribution is \$787 [\$600 + \$187].

■ **Par. 4.** In § 1.408A–5, A–2(c) is revised to read as follows:

§ 1.408A–5 Recharacterized contributions.

* * * * *

A–2. * * *

(c)(1) If paragraph (b) of this A–2 does not apply, then, for purposes of determining net income attributable to IRA contributions, the net income attributable to the amount of a contribution is determined by allocating to the contribution a *pro rata* portion of the earnings on the assets in the IRA during the period the IRA held the contribution. This attributable net income is calculated by using the following formula:

$$\text{Net Income} = \text{Contribution} \times \frac{(\text{Adjusted Closing Balance} - \text{Adjusted Opening Balance})}{\text{Adjusted Opening Balance}}.$$

(2) For purposes of this paragraph (c), the following definitions apply:

(i) The term *adjusted opening balance* means the fair market value of the IRA at the beginning of the computation period plus the amount of any contributions or transfers (including the contribution that is being recharacterized pursuant to section 408A(d)(6) and any other recharacterizations) made to the IRA during the computation period.

(ii) The term *adjusted closing balance* means the fair market value of the IRA at the end of the computation period plus the amount of any distributions or transfers (including contributions returned pursuant to section 408(d)(4) and recharacterizations of contributions pursuant to section 408A(d)(6)) made from the IRA during the computation period.

(iii) The term *computation period* means the period beginning immediately prior to the time the particular contribution being recharacterized is made to the IRA and ending immediately prior to the recharacterizing transfer of the contribution. If a series of regular contributions was made to the IRA, and consecutive contributions in that series are being recharacterized, the computation period begins immediately prior to the time the first of the regular contributions being recharacterized was made.

(3) When an IRA asset is not normally valued on a daily basis, the fair market value of the asset at the beginning of the computation period is deemed to be the

most recent, regularly determined, fair market value of the asset, determined as of a date that coincides with or precedes the first day of the computation period. In addition, solely for purposes of this paragraph (c), notwithstanding A–3 of this section, recharacterized contributions are taken into account for the period they are actually held in a particular IRA.

(4) In the case of an individual with multiple IRAs, the net income calculation is performed only on the IRA containing the particular contribution to be recharacterized, and that IRA is the IRA from which the recharacterizing transfer must be made.

(5) In the case of multiple contributions made to an IRA for a particular year that are eligible for recharacterization, the IRA owner can choose (by date and by dollar amount, not by specific assets acquired with those dollars) which contribution, or portion thereof, is to be recharacterized.

(6) The following examples illustrate the net income calculation under section 408A(d)(6) and this paragraph:

Example 1. (i) On March 1, 2004, when her Roth IRA is worth \$80,000, Taxpayer A makes a \$160,000 conversion contribution to the Roth IRA. Subsequently, Taxpayer A discovers that she was ineligible to make a Roth conversion contribution in 2004 and so she requests that the \$160,000 be recharacterized to a traditional IRA pursuant to section 408A(d)(6). Pursuant to this request, on March 1, 2005, when the IRA is worth \$225,000, the Roth IRA trustee transfers to a traditional IRA the \$160,000 plus allocable net income. No other

contributions have been made to the Roth IRA and no distributions have been made.

(ii) The adjusted opening balance is \$240,000 [\$80,000 + \$160,000] and the adjusted closing balance is \$225,000. Thus the net income allocable to the \$160,000 is – \$10,000 [\$160,000 × (\$225,000 – \$240,000) ÷ \$240,000]. Therefore, in order to recharacterize the March 1, 2004, \$160,000 conversion contribution on March 1, 2005, the Roth IRA trustee must transfer from Taxpayer A's Roth IRA to her traditional IRA \$150,000 [\$160,000 – \$10,000].

Example 2. (i) On April 1, 2004, when her traditional IRA is worth \$100,000, Taxpayer B converts the entire amount, consisting of 100 shares of stock in ABC Corp. and 100 shares of stock in XYZ Corp., by transferring the shares to a Roth IRA. At the time of the conversion, the 100 shares of stock in ABC Corp. are worth \$50,000 and the 100 shares of stock in XYZ Corp. are also worth \$50,000. Taxpayer B decides that she would like to recharacterize the ABC Corp. shares back to a traditional IRA. However, B may choose only by dollar amount the contribution or portion thereof that is to be recharacterized. On the date of transfer, November 1, 2004, the 100 shares of stock in ABC Corp. are worth \$40,000 and the 100 shares of stock in XYZ Corp. are worth \$70,000. No other contributions have been made to the Roth IRA and no distributions have been made.

(ii) If B requests that \$50,000 (which was the value of the ABC Corp. shares at the time of conversion) be recharacterized, the net income allocable to the \$50,000 is \$5,000 [\$50,000 × (\$110,000 – \$100,000) ÷ \$100,000]. Therefore, in order to recharacterize \$50,000 of the April 1, 2004, conversion contribution on November 1, 2004, the Roth IRA trustee must transfer from Taxpayer B's Roth IRA to a traditional IRA assets with a value of \$55,000 [\$50,000 + \$5,000].
