

Seamless line pipes are intended for the conveyance of oil and natural gas or other fluids in pipe lines. Seamless line pipes are produced to the API 5L specification.

Seamless water well pipe (ASTM A-589) and seamless galvanized pipe for fire protection uses (ASTM A-795) are used for the conveyance of water.

Seamless pipes are commonly produced and certified to meet ASTM A-106, ASTM A-53, API 5L-B, and API 5L-X42 specifications. To avoid maintaining separate production runs and separate inventories, manufacturers typically triple or quadruple certify the pipes by meeting the metallurgical requirements and performing the required tests pursuant to the respective specifications. Since distributors sell the vast majority of this product, they can thereby maintain a single inventory to service all customers.

The primary application of ASTM A-106 pressure pipes and triple or quadruple certified pipes is use in pressure piping systems by refineries, petrochemical plants, and chemical plants. Other applications are in power generation plants (electrical-fossil fuel or nuclear), and in some oil field uses (on shore and off shore) such as for separator lines, gathering lines and metering runs. A minor application of this product is for use as oil and gas distribution lines for commercial applications. These applications constitute the majority of the market for the subject seamless pipes. However, ASTM A-106 pipes may be used in some boiler applications.

Redraw hollows are any unfinished pipe or "hollow profiles" of carbon or alloy steel transformed by hot rolling or cold drawing/hydrostatic testing or other methods to enable the material to be sold under ASTM A-53, ASTM A-106, ASTM A-333, ASTM A-334, ASTM A-335, ASTM A-589, ASTM A-795, and API 5L specifications.

The scope of the order includes all seamless pipe meeting the physical parameters described above and produced to one of the specifications listed above, regardless of application, with the exception of the specific exclusions discussed below, and whether or not also certified to a non-covered specification. Standard, line, and pressure applications and the above-listed specifications are defining characteristics of the scope of the order. Therefore, seamless pipes meeting the physical description above, but not produced to the ASTM A-53, ASTM A-106, ASTM A-333, ASTM A-334, ASTM A-335, ASTM A-589, ASTM A-795, and API 5L specifications shall be covered if used in a standard, line, or pressure

application, with the exception of the specific exclusions discussed below.

For example, there are certain other ASTM specifications of pipe which, because of overlapping characteristics, could potentially be used in ASTM A-106 applications. These specifications generally include ASTM A-161, ASTM A-192, ASTM A-210, ASTM A-252, ASTM A-501, ASTM A-523, ASTM A-524, and ASTM A-618. When such pipes are used in a standard, line, or pressure pipe application, with the exception of the specific exclusions discussed below, such products are covered by the scope of the order.

Specifically excluded from the scope of the order is boiler tubing and mechanical tubing, if such products are not produced to ASTM A-53, ASTM A-106, ASTM A-333, ASTM A-334, ASTM A-335, ASTM A-589, ASTM A-795, and API 5L specifications and are not used in standard, line, or pressure pipe applications. In addition, finished and unfinished OCTG are excluded from the scope of the order, if covered by the scope of another antidumping duty order from the same country. If not covered by such an OCTG order, finished and unfinished OCTG are included in this scope when used in standard, line or pressure applications.

With regard to the excluded products listed above, the Department will not instruct BCBP to require end-use certification until such time as petitioner or other interested parties provide to the Department a reasonable basis to believe or suspect that the products are being used in a covered application. If such information is provided, we will require end-use certification only for the product(s) (or specification(s)) for which evidence is provided that such products are being used in covered applications as described above. For example, if, based on evidence provided by petitioner, the Department finds a reasonable basis to believe or suspect that seamless pipe produced to the A-161 specification is being used in a standard, line or pressure application, we will require end-use certifications for imports of that specification. Normally we will require only the importer of record to certify to the end use of the imported merchandise. If it later proves necessary for adequate implementation, we may also require producers who export such products to the United States to provide such certification on invoices accompanying shipments to the United States.

Although the HTSUS subheadings are provided for convenience and BCBP purposes, our written description of the

merchandise subject to this scope is dispositive.

Duty Absorption

On October 25, 2002, U.S. Steel requested that the Department determine whether or not antidumping duties had been absorbed during the POR. Section 751(a)(4) of the Tariff Act of 1930, as amended, (the Act) provides for the Department, if requested, to determine during an administrative review initiated two or four years after the publication of the order, whether antidumping duties have been absorbed by a foreign producer or exporter, if the subject merchandise is sold in the United States through an affiliated importer. In this case, Silcotub sold to the United States through an importer that is affiliated with Silcotub within the meaning of section 771(33) of the Act.

Because this review was initiated two years after the publication of the antidumping duty order, we will make a duty absorption determination in this segment of the proceeding. Because we preliminarily find an absence of dumping in this review, there is no basis under the statute for a finding that any antidumping duties have been absorbed by Silcotub or its affiliated U.S. importer.¹ If these results remain unchanged in the final results of this review, we will continue to find that no duties were absorbed by Silcotub or its affiliated U.S. importer during the POR.

Separate Rates

Romania's designation as a NME country remained in effect until January 1, 2003.² We are therefore treating

² In *Certain Small Diameter Carbon and Alloy Seamless Standard, Line, and Pressure Pipe from Romania: Final Results of Antidumping Duty Administrative Review*, 68 FR 12672, 12673 (March 17, 2003), the Department reviewed the non-market economy status of Romania and determined to reclassify Romania as a market economy for purposes of antidumping and countervailing duty proceedings, pursuant to section 771(18)(A) of the Act, effective January 1, 2003. See Memorandum from Lawrence Norton, Import Policy Analyst, to Joseph Spetrini, Acting Assistant Secretary for Import Administration: Antidumping Duty Administrative Review of Certain Small Diameter Carbon and Alloy Seamless Standard, Line and Pressure Pipe from Romania-Non-Market Economy Status Review (March 10, 2003), placed on the record of this administrative review. The March 10, 2003 decision with respect to Romania's NME status provided that:

This finding will apply to all future administrative proceedings covering periods of investigation or review that fall after January 1, 2003. Where a proceeding's period of investigation or review begins before January 1, 2003, but ends after that date, the Department will use the standard
