

The annual reporting and recordkeeping cost burden in the previous ICR was \$8,000 of which the capital/startup costs were \$4,000 and the operation and maintenance costs were \$4,000.

(20) NSPS for Magnetic Tape Coating Facilities (40 CFR part 60, subpart SSS); Docket ID Number OECA-2003-0023; EPA ICR Number 1135.08; OMB Control Number 2060-0171; expiration date February 29, 2004.

**Affected Entities:** Magnetic tape coating facilities.

**Abstract:** The NSPS for Magnetic Tape Coating Facilities was promulgated on October 3, 1988. These standards apply to each coating operation and each piece of coating mix preparation equipment for which construction, modification or reconstruction commenced after January 22, 1986. Volatile organic compounds (VOC) are the pollutants regulated under the standards.

Owners or operators of the affected facilities described must make the following one-time-only reports: Notification of the date of construction or reconstruction; notification of the anticipated and actual dates of startup; notification of any physical or operational change to an existing facility which may increase the regulated pollutant emission rate; notification of the date of the initial performance test; and the results of the initial performance test. Owners or operators also are required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility.

Monitoring requirements specific to the magnetic tape coating facilities consist mainly of VOC measurements, including monthly records of VOC content of all coatings applied, total amount and percent VOC recovered, and the total amount of coating applied. In addition, facilities utilizing less solvent annually than the applicable cutoff shall make semiannual estimates of projected annual amount of solvent use and maintain records of actual solvent use.

Each owner or operator of affected magnetic tape coating facilities shall install, calibrate, maintain, and operate a monitoring device that continuously indicates and records the concentration level of organic compounds in the outlet gas stream. Certain facilities will also be required to continuously measure and record either the combustion temperature of the incinerator (for those facilities controlled by a thermal incinerator) or the condenser exhaust temperature.

**Burden Statement:** In the previously approved ICR, the estimated number of respondents for this information collection was 13 with 56 responses per year. The annual industry reporting and recordkeeping burden for this collection of information was 3,891 hours. On the average, each respondent reported 4.3 times per year and 70 hours were spent preparing each response. The annual reporting and recordkeeping cost burden associated with continuous emission monitoring in the previous ICR and annualized over its expected useful life was \$93,000 of which the capital/startup costs were \$27,000 and the operation and maintenance costs were \$66,000.
