Background

This proposed revision to TSO-C37d includes the latest TSO boilerplate language. This language incorporates a Functionality definition used to specify the Function Hazard Classification. Furthermore, the data required with the TSO application has been slightly modified to include:

a. The minimum operational performance standards defined by RTCA/DO-186A, "Minimum Operational Performance Standards for Airborne Radio Communications Equipment Operating Within the Radio Frequency Range 117.975-137.00 Mhz," Section 2.0, dated October 20, 1995, including Change 1, dated September 29, 1998, and Change 2, dated March 5, 2002.

b. The minimum requirements of 8.33 kHz channel spacing transmitters (Class 5 and 6) as defined by RTCA/DO-186A, including Changes 1 and 2, while retaining requirements of 25 kHz channel spacing transmitters (Class 3 and 4) of TSO-37d.

c. By reference to RTCA/DO-186A, including Channels 1 and 2, addresses the electromagnetic compatibility with the Global Navigation Satellite System (GNSS).

d. The environmental conditions and test procedures specified in RTCA/DO-160D, including Changes 1, 2, and 3.

The basic TSO provides minimum performance standards for VHF radio communications transmitting equipment. Incorporated within this standard are equipment characteristics that should be useful to users, designers, manufacturers, and installers of VHF

radio communications transmitting equipment.
