### A. Background Information

Diazinon is an organophosphorous insecticide and is one of the most widely used insecticides in the U.S. It is used for outdoor non-agricultural, as well as agricultural, pest control.

Under a December 5, 2000 Memorandum of Agreement (MOA) between Syngenta Crop Protection, Inc. and EPA, Syngenta requested, under FIFRA section 6(f), that EPA cancel, effective as of June 30, 2003, the registrations of all of Syngenta's diazinon manufacturing-use products which are used in formulation for

outdoor non-agricultural use. In the MOA, EPA expressed that it would not contemplate permitting sale, distribution or use of existing stocks of these outdoor non-agricultural manufacturing-use products, except for return to the registrant for purposes of relabeling for export, or disposal. In a letter dated April 8, 2003, Syngenta Crop Protection, Inc. requested a voluntary cancellation of all its remaining registrations (agricultural uses) for products containing diazinon, to be effective June 30, 2003. Syngenta's April 8 request is contingent upon

EPA's granting of certain existing stocks provisions, which are set forth in Unit IV. of this Notice. EPA intends to grant Syngenta's requests by issuing a cancellation order at the close of the comment period for this announcement, unless the Agency receives substantive comments within the comment period that would merit its further review of these requests.

The Reregistration Eligibility Decision (RED) document summarizes the findings of EPA's reregistration process for individual chemical cases, and reflects the Agency's decision on risk
