

direct shell evacuation system, and clarified some definitions.

In general, all NSPS standards require initial notifications, performance tests, and periodic reports. Owners or operators are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all sources subject to NSPS. Any owner or operator subject to the provisions of this part shall maintain a file of these measurements, and retain the file for at least two years following the date of such measurements, maintenance reports, and records.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 303 (rounded) hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Plants with electric arc furnaces, AOD vessels, and dust handling systems that produce carbon, alloy, or specialty steels.

Estimated Number of Respondents: 95.

Frequency of Response: Initial and semiannual.

Estimated Total Annual Hour Burden: 58,195 hours (rounded).

Estimated Total Capital and Operations & Maintenance (O&M) Annual Costs: \$289,890 which includes \$4,140 annualized capital/startup costs and \$285,750 annual O&M costs.

Changes in the Estimates: There is an increase of 9,782 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This increase is due to an increase on the number of sources and revisions to the assumptions made to determine the industry burden. A net increase of 5 sources (90 to 95) was determined due to the inclusion of 10 steel forging facilities that use electric arc furnaces to develop intermediate products as affected facilities which offset the decreased (90 to 85) number of minimills. In addition, the increase is due to corrections made to the percentages used to evaluate the burden associated with the different types of activities sources are conducting to comply with the monitoring of stack emissions and the fugitive emissions monitoring requirements.
