

Plantago princeps—e, Oahu 20—*Platanthera holochila*—a, Oahu 20—*Platanthera holochila*—b, Oahu 20—*Pteris lidgatei*—a, Oahu 20—*Pteris lidgatei*—b, Oahu 20—*Pteris lidgatei*—c, Oahu 20—*Sanicula purpurea*—a, Oahu 20—*Schiedea kaalae*—e, Oahu 20—*Tetraplasandra gymnocarpa*—a, Oahu 20—*Tetraplasandra gymnocarpa*—b, Oahu 20—*Tetraplasandra gymnocarpa*—c, Oahu 20—*Tetraplasandra gymnocarpa*—d, Oahu 35—*Tetraplasandra gymnocarpa*—e, Oahu 35—*Tetraplasandra gymnocarpa*—f, Oahu 20—*Trematolobelia singularis*—a, Oahu 20—*Trematolobelia singularis*—b, Oahu 34—*Trematolobelia singularis*—c, Oahu 35—*Trematolobelia singularis*—d, Oahu 35—*Trematolobelia singularis*—e, Oahu 20—*Viola oahuensis*—a, and Oahu 20—*Viola oahuensis*—b.

Oahu M

This unit was proposed as critical habitat for *Sesbania tomentosa*. We excluded the proposed critical habitat for this multi-island species. This area is not essential for the conservation of *S. tomentosa* because it lacks one or more of the primary constituent elements, has a lower proportion of associated native species than other areas we consider to be essential to the conservation of *S. tomentosa*, and is less likely to contain the primary constituent elements long-term because it is not currently managed for conservation of this species. In addition, there are at least 10 other locations in its historical range on Oahu and other islands that provide habitat for this species, which are either designated as critical habitat in this rule; have been designated on Kauai, Molokai, Maui, and the Northwestern Hawaiian Islands; or have been proposed for designation on the island of Hawaii. Exclusion of this unit from critical habitat for *Sesbania tomentosa* resulted in the removal of this 100 ha (246 ac) unit from the final designation.

Oahu N

This unit was proposed as critical habitat for two species: *Centaurium sebaeoides* and *Sesbania tomentosa*. We excluded the proposed critical habitat for *Centaurium sebaeoides*, a multi-island species. This area is not essential for the conservation of this species because it lacks one or more of the primary constituent elements, has a lower proportion of associated native species than other areas we consider to be essential to the conservation of *C. sebaeoides*, and is less likely to contain the primary constituent elements long-term because it is not currently managed

for conservation of this species. In addition, there are at least 10 other locations in its historical range on Oahu and other islands that provide habitat for this species, which are either designated as critical habitat in this rule; have been designated on Kauai, Molokai, and Maui; or are found in an area managed for the species on Lanai. The area designated as critical habitat for *Sesbania tomentosa* provides habitat within its historical range for one population. The exclusion of *Centaurium sebaeoides* did not result in a change to the acreage of this unit, which was renamed Oahu 18—*Sesbania tomentosa*—b.

Oahu O

This unit was proposed as critical habitat for three species: *Cyanea crispa*, *Cyanea truncata*, and *Schiedea kaalae*. Modifications were made to this unit to exclude areas that do not contain the primary constituent elements essential to the conservation of *Cyanea crispa* and *Cyanea truncata*, both endemic to Oahu. The area designated as critical habitat for the three Oahu-endemic species provides habitat within their historical ranges for one population each of *Cyanea crispa*, *Cyanea truncata*, and *Schiedea kaalae*. In order to meet the recovery goal of 8 to 10 populations within the historical range of each of these three species, other locations on Oahu are being designated as critical habitat in this rule. Modifications to this unit resulted in the reduction from 431 ha (1,066 ac) to 312 ha (772 ac). This unit was renamed Oahu 21—*Cyanea crispa*—c, Oahu 21—*Cyanea truncata*—b, and Oahu 21—*Schiedea kaalae*—f.

Oahu P

This unit was proposed as critical habitat for *Sesbania tomentosa*. We excluded the proposed critical habitat for this multi-island species. This area is not essential for the conservation of *S. tomentosa* because it lacks one or more of the primary constituent elements, has a lower proportion of associated native species than other areas we consider to be essential to the conservation of *Sesbania tomentosa*, and is less likely to contain the primary constituent elements long-term because it is not currently managed for conservation of this species. In addition, there are at least 10 other locations in its historical range on Oahu and other islands that provide habitat for this species which are either designated as critical habitat in this rule; have been designated on Kauai, Molokai, and Maui, and the Northwestern Hawaiian Islands; or have been proposed for designation on the island of Hawaii.

Exclusion of this unit from critical habitat for *Sesbania tomentosa* resulted in the removal of this entire unit (2 ha (3 ac)) from the final designation.

Oahu Q

This unit was proposed as critical habitat for two species: *Chamaesyce kuwaleana* and *Sesbania tomentosa*. We excluded the proposed critical habitat for *Sesbania tomentosa*, a multi-island species. This area is not essential for the conservation of this species because it lacks one or more of the primary constituent elements, has a lower proportion of associated native species than other areas we consider to be essential to the conservation of *S. tomentosa*, and is less likely to contain the primary constituent elements long-term because it is not currently managed for conservation of this species. In addition, there are at least 10 other locations in its historical range on Oahu and other islands that provide habitat for this species, which are either designated as critical habitat in this rule; have been designated on Kauai, Molokai, and Maui, and the Northwestern Hawaiian Islands; or have been proposed for designation on the island of Hawaii. The area designated as critical habitat for the Oahu-endemic, *Chamaesyce kuwaleana*, provides habitat within its historical range for one population. No modifications were made to the acreage of this unit, which was renamed Oahu 22—*Chamaesyce kuwaleana*—e.

Oahu R

This unit was proposed as critical habitat for two species: *Chamaesyce kuwaleana* and *Sesbania tomentosa*. We excluded the proposed critical habitat for *Sesbania tomentosa*, a multi-island species. This area is not essential for the conservation of this species because it lacks one or more of the primary constituent elements, has a lower proportion of associated native species than other areas we consider to be essential to the conservation of *S. tomentosa*, and is less likely to contain the primary constituent elements long-term because it is not currently managed for conservation of this species. In addition, there are at least 10 other locations in its historical range on Oahu and other islands that provide habitat for this species, which are either designated as critical habitat in this rule; have been designated on Kauai, Molokai, and Maui, and the Northwestern Hawaiian Islands; or have been proposed for designation on the island of Hawaii. The area designated as critical habitat for the Oahu-endemic, *Chamaesyce kuwaleana*, provides
