

recovery populations from being destroyed by one naturally occurring catastrophic event.

Oahu 4—*Neraudia angulata*—e

This unit is critical habitat for *Neraudia angulata* and is 40 ha (98 ac) on State (Waianae Kai Forest Reserve) land. This unit contains no named natural features. This unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Neraudia angulata* and is currently occupied by 40 individuals. This unit is essential to the conservation of the species because it supports an extant colony of this species and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential for *Neraudia angulata* var. *angulata* include, but are not limited to, slopes, ledges, or gulches in lowland mesic or dry forest. The habitat features contained in this unit that are essential for *Neraudia angulata* var. *dentata* include, but are not limited to, cliffs, rock embankments, gulches, or slopes in mesic or dry forest. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species and from habitat for three populations on Army lands at Makua Military Reservation, in order to avoid all recovery populations from being destroyed by one naturally occurring catastrophic event.

Oahu 15—*Neraudia angulata*—f

This unit is critical habitat for *Neraudia angulata* and is 83 ha (207 ac) on Federal (Lualualei Naval Reservation) and State land. This unit contains no named natural features. This unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Neraudia angulata* and is currently occupied by 5 individuals. This unit is essential to the conservation of the species because it supports an extant colony of this species and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential for *Neraudia angulata* var. *angulata* include, but are not limited to, slopes, ledges, or gulches in lowland mesic or dry forest. The habitat features contained in this unit that are essential for *Neraudia angulata* var. *dentata* include, but are not limited to, cliffs, rock embankments, gulches, or slopes in mesic or dry forest. This unit is

geographically separated from the other five units designated as critical habitat for this island-endemic species and from habitat for three populations on Army lands at Makua Military Reservation, in order to avoid all recovery populations from being destroyed by one naturally occurring catastrophic event.

Oahu 3—*Nototrichium humile*—a

This unit is critical habitat for *Nototrichium humile* and is 20 ha (51 ac) on State (Kaena Point State Park and Kuaokala Forest Reserve) land. This unit contains no named natural features. This unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Nototrichium humile* and is currently occupied by 900 individuals. This unit is essential to the conservation of the species because it supports an extant colony of this species and includes habitat that is necessary for the expansion of the present population. The habitat features contained in this unit that are essential for this species include, but are not limited to, cliff faces, gulches, stream banks, or steep slopes in dry or mesic forest often dominated by *Sapindus oahunensis* or *Diopsiros sandwicensis*. This unit is geographically separated from critical habitat designated elsewhere on Oahu and on Maui for this species in order to avoid all recovery populations being destroyed by one naturally occurring catastrophic event.

Oahu 4—*Nototrichium humile*—b

This unit is critical habitat for *Nototrichium humile* and is 229 ha (568 ac) on private and State (Pahole NAR and Mokuleia Forest Reserve) land, containing a portion of Mokuleia Trail. This unit provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Nototrichium humile* and is currently occupied by 10 individuals. This unit is essential to the conservation of the species because it supports an extant colony of this species and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential for this species include, but are not limited to, cliff faces, gulches, stream banks, or steep slopes in dry or mesic forest often dominated by *Sapindus oahunensis* or *Diopsiros sandwicensis*. This unit is geographically separated from critical habitat designated elsewhere on Oahu and on Maui for this species in order to avoid all recovery

populations being destroyed by one naturally-occurring catastrophic event.

Oahu 4—*Nototrichium humile*—c

This unit is critical habitat for *Nototrichium humile* and is 236 ha (586 ac) on private and State (Mokuleia Forest Reserve and Kaala NAR) land. This unit contains no named natural features. This unit provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Nototrichium humile* and is currently occupied by 54 individuals. This unit is essential to the conservation of the species because it supports an extant colony of this species and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential for this species include, but are not limited to, cliff faces, gulches, stream banks, or steep slopes in dry or mesic forest often dominated by *Sapindus oahunensis* or *Diopsiros sandwicensis*. This unit is geographically separated from critical habitat designated elsewhere on Oahu and on Maui for this species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 4—*Nototrichium humile*—d

This unit is critical habitat for *Nototrichium humile* and is 30 ha (75 ac) on State (Waianae Kai Forest Reserve) land. This unit contains no named natural features. This unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Nototrichium humile* and is currently occupied by 215 individuals. This unit is essential to the conservation of the species because it supports an extant colony of this species and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential for this species include, but are not limited to, cliff faces, gulches, stream banks, or steep slopes in dry or mesic forest often dominated by *Sapindus oahunensis* or *Diopsiros sandwicensis*. This unit is geographically separated from critical habitat designated elsewhere on Oahu and on Maui for this species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 4—*Peucedanum sandwicense*—a

This unit is critical habitat for *Peucedanum sandwicense* and is 76 ha
