

to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 15—*Tetramolopium lepidotum* ssp. *lepidotum*—c

This unit is critical habitat for *Tetramolopium lepidotum* ssp. *lepidotum* and is 11 ha (28 ac) on Federal lands (Lualualei Naval Reservation), containing Puu Hapapa. The unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Tetramolopium lepidotum* ssp. *lepidotum* and is currently unoccupied. This unit is essential to the species' conservation because it supports habitat that is necessary for the establishment of additional populations on Oahu in order to reach recovery goals. The habitat features contained in this unit that are essential to *Tetramolopium lepidotum* ssp. *lepidotum* include, but are not limited to, grassy ridgetops, slopes, or cliffs in windblown dry forests. This unit is geographically separated from the other five units designated as critical habitat on Oahu for this species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 15—*Tetramolopium lepidotum* ssp. *lepidotum*—d

This unit is critical habitat for *Tetramolopium lepidotum* ssp. *lepidotum* and is 94 ha (233 ac) on Federal (Lualualei Naval Reservation), State, and private (Honouliuli Preserve) lands, containing Puu Kanehoa. The unit, in combination with Oahu 15—*Tetramolopium lepidotum* ssp. *lepidotum*—e, provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Tetramolopium lepidotum* ssp. *lepidotum* and is currently unoccupied. This unit is essential to the species' conservation because it supports habitat that is necessary for the establishment of additional populations on Oahu in order to reach recovery goals. The habitat features contained in this unit that are essential to *Tetramolopium lepidotum* ssp. *lepidotum* include, but are not limited to, grassy ridgetops, slopes, or cliffs in windblown dry forests. This unit is geographically separated from the other five units designated as critical habitat on Oahu for this species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 15—*Tetramolopium lepidotum* ssp. *lepidotum*—e

This unit is critical habitat for *Tetramolopium lepidotum* ssp.

*lepidotum* and is 1 ha (3 ac) on State and private (Honouliuli Preserve) lands. There are no named natural features in this unit. The unit, in combination with Oahu 15—*Tetramolopium lepidotum* ssp. *lepidotum*—d, provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Tetramolopium lepidotum* ssp. *lepidotum*. It is currently unoccupied. This unit is essential to the species' conservation because it supports habitat that is necessary for the establishment of additional populations on Oahu in order to reach recovery goals. The habitat features contained in this unit that are essential to *Tetramolopium lepidotum* ssp. *lepidotum* include, but are not limited to, grassy ridgetops, slopes, or cliffs in windblown dry forests. This unit is geographically separated from the other five units designated as critical habitat on Oahu for this species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 15—*Tetramolopium lepidotum* ssp. *lepidotum*—f

This unit is critical habitat for *Tetramolopium lepidotum* ssp. *lepidotum* and is 259 ha (641 ac) on Federal (Lualualei Naval Reservation), State, and private lands, containing Palikea Summit. The unit provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Tetramolopium lepidotum* ssp. *lepidotum* and is currently unoccupied. This unit is essential to the species' conservation because it supports habitat that is necessary for the establishment of additional populations on Oahu in order to reach recovery goals. The habitat features contained in this unit that are essential to *Tetramolopium lepidotum* ssp. *lepidotum* include, but are not limited to, grassy ridgetops, slopes, or cliffs in windblown dry forests. This unit is geographically separated from the other five units designated as critical habitat on Oahu for this species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 20—*Tetraplasandra gymnocarpa*—a

This unit is critical habitat for *Tetraplasandra gymnocarpa* and is 457 ha (1,129 ac) on State (Sacred Falls State Park, Hauula Forest Reserve, and Kaipapau Forest Reserve) and private lands, containing the Koolau Summit Trail. The unit provides habitat for one population of 100 mature, reproducing individuals of the long-lived perennial

*Tetraplasandra gymnocarpa* and is occupied by 24 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Tetraplasandra gymnocarpa* include, but are not limited to, windswept summit ridges, slopes, or gullies in wet or sometimes mesic lowland forests or shrublands. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 20—*Tetraplasandra gymnocarpa*—b

This unit is critical habitat for *Tetraplasandra gymnocarpa* and is 235 ha (581 ac) on State (Kahana Valley State Park), and private lands, containing Puu Kaaumakua. The unit provides habitat for one population of 100 mature, reproducing individuals of the long-lived perennial *Tetraplasandra gymnocarpa* and is occupied by 5 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Tetraplasandra gymnocarpa* include, but are not limited to, windswept summit ridges, slopes, or gullies in wet or sometimes mesic lowland forests or shrublands. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species in order to avoid all recovery populations being destroyed by one naturally-occurring catastrophic event.

Oahu 20—*Tetraplasandra gymnocarpa*—c

This unit is critical habitat for *Tetraplasandra gymnocarpa* and is 411 ha (1,018 ac) on State (Waiahole Forest Reserve and Ewa Forest Reserve) and private lands, containing Eleao Summit. The unit provides habitat for one population of 100 mature, reproducing individuals of the long-lived perennial *Tetraplasandra gymnocarpa* and is occupied by 2 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently
