

destroyed by one naturally occurring catastrophic event.

Oahu 35—*Trematolobelia singularis*—d

This unit is critical habitat for *Trematolobelia singularis* and is 13 ha (33 ac) on State lands, containing Puu Lanihuli. The unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Trematolobelia singularis* and is occupied by 100 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Trematolobelia singularis* include, but are not limited to, steep, windswept cliff faces or slopes in *Metrosideros polymorpha-Dicranopteris linearis* lowland wet shrubland. Although we do not believe that enough habitat currently exists to reach the recovery goal of 8 to 10 populations for this species, this unit is geographically separated from the other four units designated as critical habitat for this island-endemic species to avoid all recovery populations from being destroyed by one naturally occurring catastrophic event.

Oahu 35—*Trematolobelia singularis*—e

This unit is critical habitat for *Trematolobelia singularis* and is 26 ha (64 ac) on State (Honolulu Watershed Forest Reserve) and private lands, containing Konahuanui Summit. The unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Trematolobelia singularis* and is occupied by 15 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Trematolobelia singularis* include, but are not limited to, steep, windswept cliff faces or slopes in *Metrosideros polymorpha-Dicranopteris linearis* lowland wet shrubland. Although we do not believe that enough habitat currently exists to reach the recovery goal of 8 to 10 populations for this species, this unit is geographically separated from the other four units designated as critical habitat for this island-endemic species to avoid all recovery populations from being destroyed by one naturally occurring catastrophic event.

Oahu 4—*Urera kaalae*—a

This unit is critical habitat for *Urera kaalae* and is 53 ha (133 ac) on State (Waianae Kai Forest Reserve) lands. There are no named natural features in this unit. The unit, in combination with Oahu 4—*Urera kaalae*—b, provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Urera kaalae* and is currently unoccupied. This unit is essential to the species' conservation because it supports habitat that is necessary for the establishment of additional populations on Oahu in order to reach recovery goals. The habitat features contained in this unit that are essential to *Urera kaalae* include, but are not limited to, slopes or gulches in diverse mesic forest. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species in order to avoid all recovery populations being destroyed by one naturally occurring catastrophic event.

Oahu 4—*Urera kaalae*—b

This unit is critical habitat for *Urera kaalae* and is 17 ha (43 ac) on State (Honolulu Watershed Forest Reserve) lands. There are no named natural features in this unit. The unit, in combination with Oahu 4—*Urera kaalae*—a, provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Urera kaalae* and is occupied by 3 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Urera kaalae* include, but are not limited to, slopes or gulches in diverse mesic forest. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species in order to avoid all recovery populations being destroyed by one naturally occurring catastrophic event.

Oahu 15—*Urera kaalae*—c

This unit is critical habitat for *Urera kaalae* and is 224 ha (555 ac) on Federal (Lualualei Naval Reservation) and private (Honouliuli Preserve) lands, containing Puu Hapapa and Puu Kanehoa. The unit provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Urera kaalae* and is occupied by 4 individuals. This unit is essential to the species' conservation

because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Urera kaalae* include, but are not limited to, slopes or gulches in diverse mesic forest. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species in order to avoid all recovery populations being destroyed by one naturally occurring catastrophic event.

Oahu 15—*Urera kaalae*—d

This unit is critical habitat for *Urera kaalae* and is 35 ha (87 ac) on private (Honouliuli Preserve) lands. There are no named natural features in this unit. The unit provides habitat for one population of 300 mature, reproducing individuals of the short-lived perennial *Urera kaalae* and is occupied by 7 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Urera kaalae* include, but are not limited to, slopes or gulches in diverse mesic forest. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species in order to avoid all recovery populations being destroyed by one naturally occurring catastrophic event.

Oahu 15—*Urera kaalae*—e

This unit is critical habitat for *Urera kaalae* and is 51 ha (125 ac) on Federal (Lualualei Naval Reservation) and State lands. There are no named natural features in this unit. The unit, in combination with Oahu 15—*Urera kaalae*—f, provides habitat for 2 populations of 300 mature, reproducing individuals of the short-lived perennial *Urera kaalae* and is occupied by 6 individuals. This unit is essential to the species' conservation because it supports an extant colony and includes habitat that is necessary for the expansion of the present population, which is currently considered nonviable. The habitat features contained in this unit that are essential to *Urera kaalae* include, but are not limited to, slopes or gulches in diverse mesic forest. This unit is geographically separated from the other five units designated as critical habitat for this island-endemic species in order to avoid all recovery populations being
