 UL 60730-2-16A Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Water Level Controls  
 UL 61058-1 Switch for Appliances for Household and Similar Applications  
 OSHA's recognition of TUV, or any NRTL, for a particular test standard is limited to equipment or materials (*i.e.*, products) for which OSHA standards require third party testing and certification before use in the workplace. Consequently, an NRTL's scope of recognition excludes any product(s) that fall within the scope of a test standard, but for which OSHA standards do not require NRTL testing and certification.

Many of the test standards listed above are approved as American National Standards by the American National Standards Institute (ANSI). However, for convenience in compiling the list, we often use the designation of the standards developing organization (*e.g.*, UL 1029) for the standard, as opposed to the ANSI designation (*e.g.*, ANSI/UL 1029). Under our procedures, an NRTL recognized for an ANSI-approved test standard may use either the latest proprietary version of the test standard or the latest ANSI version of that standard, regardless of whether it is currently recognized for the proprietary or ANSI version. Contact "NSSN" (<http://www.nssn.org>), an organization partially sponsored by ANSI, to find out whether or not a test standard is currently ANSI-approved.

#### Conditions

TUV must also abide by the following conditions of the recognition, in addition to those already required by 29 CFR 1910.7:

TUV must have specific written testing procedures in place before testing products covered by any test standard for which it is recognized and must use these procedures in testing and certifying those products;

OSHA must be allowed access to TUV's facility and records for purposes of ascertaining continuing compliance with the terms of its recognition and to investigate as OSHA deems necessary;

If TUV has reason to doubt the efficacy of any test standard it is using under this program, it must promptly inform the test standard developing organization of this fact and provide that organization with appropriate relevant information upon which its concerns are based;

TUV must not engage in or permit others to engage in any misrepresentation of the scope or conditions of its recognition. As part of this condition, TUV agrees that it will allow no representation that it is either a recognized or an accredited Nationally Recognized Testing Laboratory (NRTL) without clearly indicating the specific equipment or material to which this recognition is tied, or that its recognition is limited to certain products;

TUV must inform OSHA as soon as possible, in writing, of any change of ownership, facilities, or key personnel, and of any major changes in its operations as an NRTL, including details;

TUV will meet all the terms of its recognition and will always comply with all OSHA policies pertaining to this recognition; and

TUV will continue to meet the requirements for recognition in all areas where it has been recognized.

#### Notice of Correction

With respect to Docket No. NRTL2-98, NSF International (NSF) applied for a test standard listed below as part of their original expansion request but inadvertently left it out in the later version of that request. OSHA is expanding the recognition of NSF to include UL 563 Ice Makers, which requires the same type of capabilities as other test standards approved for their expansion request dated June 25, 2002 (see exhibit 10). This action is unrelated to our expansion of TUV's recognition. We include it herein only for convenience in processing.

Signed at Washington, DC, this 11th day of June, 2003.

**John L. Henshaw,**  
*Assistant Secretary.*
