

These modifications resulted in the reduction from 15,294 ha (37,792 ac) to 2,997 ha (7,406 ac). This unit was renamed Hawaii 18—*Colubrina oppositifolia*—b, Hawaii 18—*Diellia erecta*—b, Hawaii 18—*Flueggea neowawraea*—b, Hawaii 18—*Gouania vitifolia*—a, Hawaii 18—*Neraudia ovata*—d, and Hawaii 18—*Pleomele hawaiiensis*—c.

Hawaii R

This unit was proposed as critical habitat for two species: *Diellia erecta* and *Flueggea neowawraea*. Modifications were made to this unit to eliminate areas that do not contain the primary constituent elements for these species. The portions eliminated were not essential to the conservation of these species because they have a lower proportion of associated native species than other areas we consider to be essential to the conservation of these species, and there are at least 8 other locations that have been designated or are designated in this rule to meet the recovery goal of 8 to 10 populations throughout their historical ranges.

The area designated as critical habitat for these two multi-island species provides habitat for one population each of *Diellia erecta* and *Flueggea neowawraea* within their historical ranges. Critical habitat for one population each of *Diellia erecta* was designated on Kauai, Oahu, and Molokai, and four populations on Maui (68 FR 9116, February 27, 2003; 68 FR 35949, June 17, 2003; 68 FR 12982, March 19, 2003; 68 FR 25934, May 14, 2003). We are designating habitat for two populations of *Diellia erecta* on the island of Hawaii in this rule. We designated critical habitat for *Flueggea neowawraea* on Kauai (habitat for four populations), Molokai (habitat for one population), and Maui (habitat for one population) (68 FR 9116, February 27, 2003; 68 FR 12982, March 19, 2003; 68 FR 25934, May 14, 2003). In this rule, we are designating habitat for two populations. In addition, there is habitat for on Oahu for one population of *Flueggea neowawraea* on excluded lands (68 FR 35949, June 17, 2003).

These modifications resulted in the reduction from 387 ha (955 ac) to 332 ha (819 ac). This unit was renamed Hawaii 17—*Diellia erecta*—a and Hawaii 17—*Flueggea neowawraea*—a.

Hawaii S

This unit was proposed as critical habitat for two species: *Cyanea hamatiflora* ssp. *carlsonii* and *Cyanea stictophylla*. Modifications were made to this unit to eliminate areas that do not contain the primary constituent

elements for these species. Some portions eliminated were not essential to the conservation of these species because they have a lower proportion of associated native species than other areas we consider to be essential to the conservation of these species, and there are at least 8 other locations that are being designated in this rule to meet the recovery goal of 8 to 10 populations throughout their historical ranges. The area designated as critical habitat for these two island-endemic species provides habitat for one population each of *Cyanea hamatiflora* ssp. *carlsonii* and *Cyanea stictophylla* within their historical ranges.

These modifications resulted in the reduction from 383 ha (947 ac) to 331 ha (819 ac). This unit was renamed Hawaii 16—*Cyanea hamatiflora* ssp. *carlsonii*—d and Hawaii 16—*Cyanea stictophylla*—b.

Hawaii T

This unit was proposed as critical habitat for two species: *Cyanea hamatiflora* ssp. *carlsonii* and *Cyanea stictophylla*. Modifications were made to this unit to eliminate areas that do not contain the primary constituent elements for these species. Some portions eliminated were not essential to the conservation of these species because they have a lower proportion of associated native species than other areas we consider to be essential to the conservation of these species, and there are at least 8 other locations that are being designated in this rule to meet the recovery goal of 8 to 10 populations throughout their historical ranges. The area designated as critical habitat for these two island-endemic species provides habitat for one population each of *Cyanea hamatiflora* ssp. *carlsonii* and *Cyanea stictophylla* within their historical ranges.

These modifications resulted in the reduction from 1,489 ha (3,681 ac) to 1,264 ha (3,123 ac). This unit was renamed Hawaii 15—*Cyanea hamatiflora* ssp. *carlsonii*—c and Hawaii 15—*Cyanea stictophylla*—a.

Hawaii U

This unit was proposed as critical habitat for one species, *Cyanea hamatiflora* ssp. *carlsonii*. Modifications were made to this unit to eliminate areas that do not contain the primary constituent elements for this species. Some portions eliminated were not essential to the conservation of this species because they have a lower proportion of associated native species than other areas we consider to be essential to the conservation of this species, and there are at least 5 other

locations with habitat for a total of 7 populations that are designated in this rule to meet the recovery goal of 8 to 10 populations throughout the species' historical range. The area designated as critical habitat for this island-endemic species provides habitat for one population of *Cyanea hamatiflora* ssp. *carlsonii* within its historical range.

These modifications resulted in the reduction from 615 ha (1,520 ac) to 597 ha (1,475 ac). This unit was renamed Hawaii 14—*Cyanea hamatiflora* ssp. *carlsonii*—b.

Hawaii V

This unit was proposed as critical habitat for one species endemic to the island of Hawaii, *Nothocestrum breviflorum*. The entire area proposed for this species was eliminated. This area is not essential to the conservation of this species because it has a lower proportion of associated native species than other areas we consider to be essential to the conservation of this species, and there are 3 other locations that have been designated to meet the recovery goal of 8 to 10 populations throughout its historical range on this island. Habitat designated elsewhere on the island of Hawaii for this species provides habitat for nine populations. Exclusion of this unit from critical habitat for *Nothocestrum breviflorum* resulted in the overall reduction of 951 ha (2,351 ac) of critical habitat on the island of Hawaii.

Hawaii W

This unit was proposed as critical habitat for one multi-island species, *Delissea undulata*. The entire area proposed for this species was excluded. Some of it was excluded because it is not essential to the conservation of this species. We also excluded the proposed critical habitat on Kamehameha Schools lands in Hawaii W because the benefits of excluding these lands outweighed the benefits of including them in critical habitat (see "Analysis of Impacts Under Section 4(b)(2)"). These excluded lands provide habitat for three recovery populations of *Delissea undulata*. There is habitat designated elsewhere on the island of Hawaii for this species providing habitat for two populations. In addition, we have designated habitat on Kauai for three populations (68 FR 9116, February 27, 2003). Exclusion of this unit from critical habitat for *Delissea undulata* resulted in the overall reduction of 1,479 ha (3,654 ac) of critical habitat on the island of Hawaii.

Hawaii X

This unit was proposed as critical habitat for two species: *Cyanea*
