

with changing the eastern boundary of the trawl RCA in combination with the projected incidental catch of 2.22 mt (2,200 kg) associated with moving the eastern non-trawl RCA/recreational boundary (the portion south of 34°27' N. lat.) into deeper water during September - December, is expected to result in the bocaccio total mortality exceeding the 2003 bocaccio OY by approximately 2 mt (2,000 kg). Because of the additional complexities of this proposal, and because it does not need to be implemented on July 1, NMFS is not implementing the eastern non-trawl RCA and/or recreational fishing boundary change with this **Federal Register** document so as not to delay the July 1 inseason adjustment. However, NMFS is considering CDFG's request and the Pacific Council's recommendation and any action to change the eastern non-trawl RCA/recreational boundary to accommodate CDFG's request and the Pacific Council's recommendation will occur in a future action published in the **Federal Register**.

NMFS Actions
