

These regulatory changes were recommended by the RAC at meetings on October 15, and December 12, 2002, by a near unanimous vote. A member voting no expressed concern with the definition of partial production unit as proposed by the RAC.

Given the above changes, appropriate revisions are made to the text of § 989.156 to include specific references to approval of USDA for a program's provisions.

Volume Regulation Provisions

The order provides authority for volume regulation designed to promote orderly marketing conditions, stabilize prices and supplies, and improve producer returns. When volume regulation is in effect, a certain percentage of the California raisin crop may be sold by handlers to any market (free tonnage) while the remaining percentage must be held by handlers in a reserve pool (reserve) for the account of the RAC. Reserve raisins are disposed of through various programs authorized under the order. For example, reserve raisins may be sold by the RAC to handlers for free use or to replace part of the free tonnage they exported; carried over as a hedge against a short crop the following year; or may be disposed of in other outlets not competitive with those for free tonnage raisins, such as government purchase, distilleries, or animal feed. Net proceeds from sales of reserve raisins are ultimately distributed to reserve pool equity holders.

Raisin Diversion Program

The RDP is another program concerning reserve raisins authorized under the order and may be used, as a means for bringing supplies into closer balance with market needs. Authority for the program is provided in § 989.56 of the order. Paragraph (e) of that section provides authority for the RAC to establish, with the approval of USDA, such rules and regulations as may be necessary for the implementation and operation of a RDP. Accordingly, additional procedures and deadlines are specified in § 989.156.

Pursuant to these sections, the RAC must meet during the crop year to review raisin data, including information on production, supplies, market demand, and inventories. If the RAC determines that the available supply of raisins, including those in the reserve pool, exceeds projected market needs, it can decide to implement a diversion program, and announce the amount of tonnage eligible for diversion during the subsequent crop year. Producers who wish to participate in

the RDP must submit an application to the RAC. Under the current regulations, the RAC conducts a lottery if the tonnage applied for exceeds what has been allotted. RAC staff then notifies producers whether they have been accepted into the program.

Approved producers curtail their production by vine removal or some other means established by the RAC. Such producers receive a certificate the following fall from the RAC which represents the quantity of raisins diverted. Producers sell these certificates to handlers who pay producers for the free tonnage applicable to the diversion certificate minus the established harvest cost for the diverted tonnage. Handlers redeem the certificates by presenting them to the RAC, and paying an amount equal to the established harvest cost plus payment for receiving, storing, fumigating, handling, and inspecting the tonnage represented on the certificate. The RAC then gives the handler raisins from the prior year's reserve pool in an amount equal to the tonnage represented on the diversion certificate. The new crop year's volume regulation percentages are applied to the diversion tonnage acquired by the handler, as if the handler had bought raisins directly from a producer.

RAC Recommendation

The California raisin and grape industries continue to be plagued by burdensome supplies and severe economic conditions. Industry members have been reviewing various options to help address some of these concerns. The RAC also has been reviewing options to help the industry address these issues through the marketing order. The RAC proposed some requirements for a 2003 RDP at a meeting on October 15, 2002. Additional revisions were proposed by the RAC's Executive Committee on October 24, and November 4 and 26, 2002. The RAC met on December 12, 2002, to review the Executive Committee's changes and proposed program. The RAC ultimately recommended specific changes to the order's regulations regarding the RDP that could apply to any future RDP. The changes are designed to provide the RAC with additional flexibility when implementing a RDP, and provide opportunity for all producers to participate in a program. The changes are described in the following paragraphs.

Additional Date for Increasing the RDP Tonnage

With the exception of the 2002–03 crop year, § 989.56(a) of the order and § 989.156(a)(1) of the regulations specify that the RAC must announce the quantity of tonnage allotted to a RDP on or before November 30 of each crop year. Section 989.156(a)(1) specifies further, with the exception of the 2002–03 crop year, that the RAC may announce an increase in the tonnage eligible for a RDP on or before January 15 of each crop year. The November 30–deadline in the order was suspended, and the November 30 and January 15 dates in the regulations were extended for the 2002–03 crop year to dates specified by the RAC (67 FR 71072; November 29, 2002) to allow time for review and modification of the RAC's proposed RDP changes.

The RAC recommended that the regulations be modified to allow the RAC an additional opportunity to increase the tonnage eligible for a RDP on or before May 1 of each crop year subsequent to 2002–03. This will allow the RAC the opportunity to allocate additional tonnage to a RDP in years when raisin deliveries may be slow, or when additional reserve raisins may be available later during the crop year. Section 989.156(a)(1) is modified accordingly.

Limit on Tonnage Allocated for Vine Removal

Section 989.156(h)(1) specifies that the RAC may limit a RDP to vine removal only. This requirement will remain unchanged by this rule. However, the RAC proposed having the ability to cap, or limit, the amount of tonnage allocated to a RDP for vine removal. For example, the RAC may allocate 100,000 tons to a RDP, of which 50,000 tons would be allotted for vine removal only. Under this scenario, the remaining 50,000 tons would be available for spur pruners (or producers who opted to reduce their production by methods other than vine removal). As described later in this rule, the RAC recommended revising the regulations to allow for the allocation of tonnage to spur pruners pro rata to all who applied. Imposing a cap on vine removers would ensure that a certain amount of tonnage would be available for a spur prune program. This additional requirement is specified in § 989.156(a)(2).

Additional Agreement for Vine Removers Who Replant

This RAC recommended that authority be added for the RAC to condition a vine removal program with
