SUPPLEMENTARY INFORMATION: The Commission has received correspondence from Messrs. Gass, Fanning, and Fulmer, *et al.*, requesting that the Commission issue a rule prescribing performance standards for a system to reduce or prevent injuries from contact with the blade of a table saw. The petitioners assert that a table

saw not so equipped poses an increased risk of severe injuries including lacerations and amputations.

The petitioners maintain that a system to reduce or eliminate this risk must include the following: (1) A detection system capable of detecting contact or dangerous proximity between a person and the saw blade when the saw blade is—(a) spinning prior to cutting, (b) cutting natural wood with a moisture content of up to 50%, (c) cutting glued wood with a moisture content of up to 30%, and (d) spinning down after turning off the motor; (2) a reaction system to perform some action upon detection of such contact or dangerous proximity, such as stopping or retracting the blade, so that a person will be cut no deeper than 1/8 of an inch when contacting or approaching the blade at any point above the table and from any direction at a rate of one foot per second; (3) a self-diagnostic capability to verify the functionality of key components of the detection and reaction systems; and (4) an interlock system with the motor so that power cannot be applied to the motor if a fault interfering with the functionality of a key component in the detection or reaction system is detected.

The Commission is docketing the correspondence as a petition under provisions of the Consumer Product Safety Act, 15 U.S.C. 2051-2084.

Interested parties may obtain a copy of the petition by writing or calling the Office of the Secretary, Consumer Product Safety Commission, Washington, DC 20207; telephone (301) 504-0800.
