

enveloped RNA virus-like particles in vitro in insect cells using a recombinant baculovirus vector containing a cDNA coding for viral structural proteins. In vitro production and purification of hepatitis C virus (HCV)-like particles containing HCV core protein, E1 protein and E2 protein is described. Sucrose gradient purified HCV-like particles exhibited similar biophysical properties as putative HCV virions. Mice injected with HCV-like particles developed HCV-specific antibodies indicating that the particles are immunogenic. HCV-like particles, purified in large quantities, may be useful in HCV vaccine development or in diagnostic kits.

The prospective exclusive license will be royalty bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless, within 60 days from the date of this published Notice, NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

The field of use may be limited to vaccine products for prevention and treatment of chronic hepatitis C (HCV) infections.

Properly filed competing applications for a license filed in response to this notice will be treated as objections to the contemplated license. Comments and objections submitted in response to this notice will not be made available for public inspection, and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: July 2, 2003.
