

and document data regarding community flood hazard mapping needs. MNUSS is designed to store mapping needs at the community level. The current version of MNUSS is an interactive, web-enabled password protected database. In order to facilitate the identification and collection of communities' current flood hazard mapping needs for input into MNUSS, FEMA developed the MNUSS Data Worksheet.

Flood hazard mapping needs information enables FEMA to be more responsive to ongoing changes affecting flood hazard areas that occur in communities participating in the NFIP. The changes include, but are not limited to, new corporate limit boundaries, changes in the road network, and changes in flood hazard areas, which affect communities' flood risks. The information is also used in providing justification for FEMA when requesting funding for flood map updates and is used along with other information to prioritize the flood hazard mapping needs of all mapped communities participating in the NFIP to assist in the allocation of annual funds for flood hazard map updates.

Affected Public: State, Local, and Tribal Governments.

Number of Respondents: 1,800.

Estimated Time per Respondent: 2.5 hours.

Estimated Total Annual Burden Hours: 8,400 hours.

Frequency of Response: Once every five years.
