

counting of residents for direct GME and IME payments.

When Congress enacted the nonhospital site provisions for both direct GME and IME, Congress intended to address application of the FTE count policy to situations where the training site had been the hospital. The intent was to create incentives for hospitals to move resident training from the hospital to nonhospital settings. We believe that Congress did not intend for hospitals to be able to add to their FTE counts residents that had historically trained outside the hospital in other settings. Training in those nonhospital settings had historically occurred without Congress offering any financial incentive to hospitals to move the training out of the hospital.

This Congressional intent is evident in the legislative history of both the direct GME and the IME provisions on nonhospital settings. First, legislative history associated with passage of the direct GME provision (as part of Pub. L. 99–509) indicates that Congress intended to broaden the scope of settings in which a hospital could train its residents and still receive separate direct GME cost reimbursement, and to provide incentives to hospitals for training residents in primary care programs. The Conference committee report indicates that “[s]ince it is difficult to find sufficient other sources of funding [than hospitals and Medicare] for the costs of such training, [that is, training in freestanding primary care settings such as family practice clinics or ambulatory surgery centers] assignments to these settings are discouraged. It is the Committee’s view that training in these settings is desirable, because of the growing trend to treat more patients *out of the inpatient hospital setting* and because of the encouragement it gives to primary care.” (Emphasis added.) (H.R. Rep. No. 99–727, 99th Cong., 1st Sess., 70 (1986).)

Thus, from the start of the policy allowing payment for training in nonprovider sites, we believe Congress intended to create a monetary incentive for hospitals to rotate residents from the hospital to the nonhospital settings. We believe Congress did not intend for hospitals to be paid for residents who had previously been training at nonhospital sites without hospital funding.

Further, in the Conference committee report accompanying the provision of Pub. L. 105–33 on IME payment for training in nonhospital settings, Congress stated that “[t]he conference agreement includes new permission for hospitals to rotate residents through

nonhospital settings, without reduction in indirect medical education funds.” (Emphasis added.) (H.R. Conf. Rep. No. 105–217, 105th Cong., 1st Sess., 817 (1997).)

We note that, prior to enactment of Pub. L. 105–33, if a hospital rotated a resident to train at a nonhospital site, the hospital could not count the time the resident spent at the nonhospital site for purposes of Medicare IME payments. As a result, the lack of IME payments acted as a disincentive and discouraged hospitals from rotating residents out of the hospital. Therefore, Congress authorized hospitals to count residents in nonhospital sites for IME purposes as a specific incentive to encourage hospitals to rotate their residents to nonhospital sites (and not to encourage hospitals to incur the costs of a program at a nonhospital site that had already been funded by other sources). This legislative intent becomes more apparent when the nature of the Medicare IME payment is considered. The Medicare IME payment is inherently a payment that reflects the increased operating costs of treating inpatients as a result of the hospital having a residency program. For example, as explained in the September 29, 1989 final rule (54 FR 40286), the indirect costs of medical education might include added costs resulting from an increased number of tests ordered by residents as compared to the number of tests normally ordered by more experienced physicians.

The IME payment is an adjustment that is made for each Medicare discharge from the areas subject to the IPPS in a teaching hospital. The authorization by Congress for IME payments relating to nonhospital services while residents are training at nonhospital sites would be absurd if not viewed as an incentive to transfer existing residency training from the hospital to the nonhospital setting. We do not believe Congress intended to permit such IME payments to be allowable to the hospital that is incurring “all or substantially all the costs” of residents training in nonhospital sites except in the situation where the hospital rotated residents from the hospital to the nonhospital settings. The illustrative situations described above in which nonhospital sites, such as dental schools, are shifting the costs of existing programs to the hospitals are not consistent with the intent of Congress to encourage hospitals to rotate residents from the hospital setting to nonhospital sites.

Thus, we believe Congress intended both cited provisions of the Act on counting residents in nonhospital sites

for purposes of direct GME and IME payments to be limited to situations in which hospitals rotate residents from the hospital to the nonhospital settings, and not situations in which nonhospital sites transfer the costs of an existing program at a nonhospital site to the hospital.

d. Medicare Principles on Redistribution of Costs and Community Support

It is longstanding Medicare policy that if the community has undertaken to bear the costs of medical education, these costs are not to be assumed by the Medicare program. In addition, medical education costs that have been incurred by an educational institution may not be redistributed to the Medicare program. Indeed, these concepts, community support and redistribution of costs, have been a part of Medicare GME payment policy since the inception of the Medicare program. Both the House and Senate Committee reports accompanying Pub. L. 89–97 (the authorizing Medicare statute) indicate that Congress intended Medicare to share in the costs of medical education only in situations in which the community has not stepped in to incur them:

“Many hospitals engage in substantial education activities, including the training of medical students, internship and residency programs, the training of nurses and the training of various paramedical personnel. Educational activities enhance the quality of care in an institution and it is intended, *until the community undertakes to bear such education costs in some other way*, that a part of the net cost of such activities * * * should be considered as an element in the cost of patient care, to be borne to an appropriate extent by the hospital insurance program. (Emphasis added.) (S. Rep. No. 404, 89th Cong., 1st Sess., 36 (1965); H.R. Rep. No. 213, 89th Cong., 1st Sess., 32 (1965).)

The principle behind the congressional committee report language for Pub. L. 89–97 that Medicare would share in the costs of educational activities until communities bore them in some other way has guided Medicare policy on educational activities from the inception of the Medicare program. The principles of community support and redistribution of costs associated with payment for GME have been continually reiterated in various regulations, manual provisions, and implementing instructions to fiscal intermediaries. As recently as the final rule published in the **Federal Register** on January 12, 2001, we stated:
