

must contain a description of how the State will accomplish the following program requirements where allowed in State programs.

(1) Assess significant changes in the watershed and source water as part of the sanitary survey process and determine appropriate follow-up action.

(2) Approve watershed control programs for the 0.5 log watershed control program credit in the microbial toolbox.

(3) Approval protocols for treatment credits under the Demonstration of Performance toolbox option and for alternative ozone and chlorine dioxide CT values.

(4) Determine that a system with an uncovered finished water reservoir has a risk mitigation plan that is adequate for purposes of waiving the requirement to cover or treat the reservoir.
