

*Annual Burden:* 10 hours.

5. *Request for Internet Services—Password—0960-0632.* SSA uses a personal identification number (PIN)/password process for verifying the identity of individuals who choose to use the Internet and Automated Telephone Response in order to conduct business with the agency. An individual will be requested to provide certain information about himself or herself that SSA can verify in its records in order to obtain a password for use with its electronic services. The information that SSA collects varies depending on individual circumstances. Some examples of the information collected are: Name, social security number, password request code, benefit payment amount, and other shared secret types of information from SSA records. Once the requestor's identity is verified, SSA issues a PIN to the requestor which will allow them to establish a password for use with SSA Internet/telephone transactions. Until now, the services offered have been primarily to beneficiaries receiving benefits under title II of the Social Security Act, including Retirement, Survivors and Disability benefits. In April 2003, SSA began offering the opportunity for certain beneficiaries receiving benefits under title XVI of the Social Security Act, known as Supplemental Security Income (SSI), to report their wages electronically. SSA will initiate a 6-month Proof of Concept project to test the beneficiary acceptance of this technology for reporting wages. Participation in this Proof of Concept is voluntary. Individuals who must report wages include SSI beneficiaries, and, in some cases, the parent or spouse of the SSI beneficiary. In order to use SSA's electronic services, SSA must authenticate the person using its PIN/password process to protect the information in its records from those not authorized to receive it. This technology is expected to be more secure, less burdensome, faster and provide better customer service than other available options. The respondents are individuals who elect to conduct business with the agency in an electronic medium.
