SUPPLEMENTARY INFORMATION:**I. Background**

On August 14, 2003 (68 FR 48668), we published a proposed rule in the **Federal Register** that would revise the existing diesel particulate matter (DPM) interim concentration limit measured by total carbon (TC) to a comparable permissible exposure limit (PEL) measured by elemental carbon (EC) which renders a more accurate DPM exposure measurement; increase flexibility of compliance by requiring MSHA's longstanding hierarchy of controls for its other exposure-based health standards at metal and nonmetal mines, but prohibit rotation of miners for compliance; allow MSHA to consider economic as well as technological feasibility in determining if operators qualify for an extension of time in which to meet the DPM limits; and simplify requirements for a DPM control plan. The proposed rule would also make conforming changes to existing provisions concerning compliance determination, environmental monitoring and recordkeeping.

II. Public Hearings

In the **Federal Register** notice published on August 14, 2003, (68 FR 48668), we announced that we would hold three public hearings on the proposed rule. However, since that time, we have added a fourth public hearing. Please note the date below.

The public hearings will begin at 9 a.m. and will end after the last scheduled speaker testifies. The hearings will be held on the following dates and at the locations indicated.
