

- (A) Nurse practitioner: 85%.
- (B) Clinical nurse specialist: 85%.
- (C) Physician assistant: 85%.
- (D) Clinical psychologist: 80%.
- (E) Clinical social worker: 75%.
- (F) Dietitian: 75%.
- (G) Clinical pharmacist: 80%.

(g) *Professional charges for anesthesia services.* When VA provides or furnishes professional anesthesia services within the scope of care referred to in paragraph (a)(1) of this section, professional anesthesia charges billed for such services will be determined in accordance with the provisions of this paragraph. Charges for professional anesthesia services provided by physicians or by certified registered nurse anesthetists when not medically directed by an anesthesiologist will be 100% of the charges determined as set forth in this paragraph. Charges for professional anesthesia services provided by a certified registered nurse anesthetist when medically directed by an anesthesiologist will be 50% of the charges otherwise determined as set forth in this paragraph, and shall be in addition to the charges for the anesthesiologist. Professional anesthesia charges consist of charges for professional services that vary by geographic area, by CPT/HCPCS code base units, and by number of time units. These charges are calculated as follows:

(1) *Formula.* For each anesthesia CPT/HCPCS code, multiply the total anesthesia RVUs determined pursuant to paragraph (g)(2) of this section by the applicable geographically-adjusted conversion factor (a monetary amount) determined pursuant to paragraph (g)(3) of this section to obtain the professional anesthesia charge for each CPT/HCPCS code in a particular geographic area.

(2) *Total RVUs for professional anesthesia services.* The total anesthesia RVUs for each anesthesia CPT/HCPCS code are the sum of the base units (as compiled by CMS) for that CPT/HCPCS code and the number of time units reported for the anesthesia service, where one time unit equals 15 minutes. For anesthesia CPT/HCPCS codes designated as unlisted procedures, base units are developed based on the weighted median base units for anesthesia CPT/HCPCS codes within the series in which the unlisted procedure code occurs. A nationwide VA distribution of procedures and services is used for the purpose of computing the weighted median base units.

(3) *Geographically-adjusted 80th percentile conversion factors.* A nationwide 80th percentile conversion factor is calculated according to the methodology set forth in paragraph

(g)(3)(i) of this section. The nationwide conversion factor is then trended forward to the effective time period for the charges, as set forth in paragraph (g)(3)(ii) of this section. The resulting amount is multiplied by geographic area adjustment factors determined pursuant to paragraph (g)(3)(iii) of this section, resulting in geographically-adjusted 80th percentile conversion factors for each geographic area for the effective charge period.

(i) *Nationwide conversion factor.* Preliminary 80th percentile conversion factors for each area are compiled from the MDR database. Then, a preliminary nationwide weighted-average 80th percentile conversion factor is calculated, using as weights the population (census) frequencies for each geographic area as presented in the Milliman USA, Inc., Health Cost Guidelines (see paragraph (a)(3) of this section for data sources). A nationwide 80th percentile fee by CPT/HCPCS code is then computed by multiplying this conversion factor by the MDR base units for each CPT/HCPCS code. An adjusted 80th percentile conversion factor by CPT/HCPCS code is then calculated by dividing the nationwide 80th percentile fee for each procedure code by the anesthesia base units (as compiled by CMS) for that CPT/HCPCS code. Finally, a nationwide weighted average 80th percentile conversion factor is calculated using combined frequencies for billed base units and time units from the Part B component of the Medicare Standard Analytical File 5% Sample as weights.

(ii) *Trending forward.* The nationwide conversion factor, obtained as described in paragraph (g)(3)(i) of this section, is trended forward based on changes to the physicians' services component of the CPI-U. Actual CPI-U changes are used from the time period of the source data through the latest available month as of the time the calculations are performed. The three-month average annual trend rate as of the latest available month is then held constant to the midpoint of the calendar year in which the charges are primarily expected to be used. The projected total CPI-U change so obtained is then applied to the conversion factor.

(iii) *Geographic area adjustment factors.* The preliminary 80th percentile conversion factors for each geographic area described in paragraph (g)(3)(i) of this section are divided by the corresponding preliminary nationwide 80th percentile conversion factor also described in paragraph (g)(3)(i). The resulting ratios are the adjustment factors for each geographic area.

(h) *Professional charges for dental services identified by HCPCS Level II codes.* When VA provides or furnishes outpatient dental professional services within the scope of care referred to in paragraph (a)(1) of this section, and such services are identified by HCPCS code rather than CPT code, the charges billed for such services will be determined in accordance with the provisions of this paragraph. The charges for dental services vary by geographic area and by HCPCS code.

These charges are calculated as follows:

(1) *Formula.* For each HCPCS dental code, multiply the nationwide 80th percentile charge determined pursuant to paragraph (h)(2) of this section by the appropriate geographic area adjustment factor determined pursuant to paragraph (h)(3) of this section. The result constitutes the area-specific dental charge.

(2) *Nationwide 80th percentile charges by HCPCS code.* For each HCPCS dental code, 80th percentile charges are extracted from three independent data sources: Prevailing Healthcare Charges System database; National Dental Advisory Service nationwide pricing index; and the Dental UCR Module of the Comprehensive Healthcare Payment System, a release from Ingenix from a nationwide database of dental charges (see paragraph (a)(3) of this section for data sources). Charges for each database are then trended forward to a common date, based on actual changes to the dental services component of the CPI-U. Charges for each HCPCS dental code from each data source are combined into an average 80th percentile charge by means of the methodology set forth in paragraph (h)(2)(i) of this section. HCPCS dental codes designated as unlisted are assigned 80th percentile charges by means of the methodology set forth in paragraph (h)(2)(ii) of this section. Finally, the resulting amounts are each trended forward to the effective time period for the charges, as set forth in paragraph (h)(2)(iii) of this section. The results constitute the nationwide 80th percentile charge for each HCPCS dental code.

(i) *Averaging methodology.* The average charge for any particular HCPCS dental code is calculated by first computing a preliminary mean average of the three charges for each code. Statistical outliers are identified and removed by testing whether any charge differs from the preliminary mean charge by more than 50% of the preliminary mean charge. In such cases, the charge most distant from the preliminary mean is removed as an outlier, and the average charge is
