

simplest offenses, for reasons that are often fortuitous, would lead to life sentences of imprisonment—sentences that neither ‘just deserts’ nor ‘crime control’ theories of punishment would find justified.

Several individual guidelines provide special instructions for increasing punishment when the conduct that is the subject of that count involves multiple occurrences or has caused several harms. The guidelines also provide general rules for aggravating punishment in light of multiple harms charged separately in separate counts. These rules may produce occasional anomalies, but normally they will permit an appropriate degree of aggravation of punishment when multiple offenses that are the subjects of separate counts take place.

These rules are set out in Chapter Three, Part D. They essentially provide: (1) When the conduct involves fungible items, *e.g.*, separate drug transactions or thefts of money, the amounts are added and the guidelines apply to the total amount. (2) When nonfungible harms are involved, the offense level for the most serious count is increased (according to a somewhat diminishing scale) to reflect the existence of other counts of conviction.

The rules have been written in order to minimize the possibility that an arbitrary casting of a single transaction into several counts will produce a longer sentence. In addition, the sentencing court will have adequate power to prevent such a result through departures where necessary to produce a mitigated sentence.

*(f) Regulatory Offenses.*

Regulatory statutes, though primarily civil in nature, sometimes contain criminal provisions in respect to particularly harmful activity. Such criminal provisions often describe not only substantive offenses, but also more technical, administratively-related offenses such as failure to keep accurate records or to provide requested information. These criminal statutes pose two problems. First, which criminal regulatory provisions should the Commission initially consider, and second, how should it treat technical or administratively-related criminal violations?

In respect to the first problem, the Commission found that it cannot comprehensively treat all regulatory violations in the initial set of guidelines. There are hundreds of such provisions scattered throughout the United States Code. To find all potential violations would involve examination of each individual federal regulation. Because of this practical difficulty, the Commission

has sought to determine, with the assistance of the Department of Justice and several regulatory agencies, which criminal regulatory offenses are particularly important in light of the need for enforcement of the general regulatory scheme. The Commission has sought to treat these offenses in these initial guidelines. It will address the less common regulatory offenses in the future.

In respect to the second problem, the Commission has developed a system for treating technical recordkeeping and reporting offenses, dividing them into four categories.

First, in the simplest of cases, the offender may have failed to fill out a form intentionally, but without knowledge or intent that substantive harm would likely follow. He might fail, for example, to keep an accurate record of toxic substance transport, but that failure may not lead, nor be likely to lead, to the release or improper treatment of any toxic substance. Second, the same failure may be accompanied by a significant likelihood that substantive harm will occur; it may make a release of a toxic substance more likely. Third, the same failure may have led to substantive harm. Fourth, the failure may represent an effort to conceal a substantive harm that has occurred.

The structure of a typical guideline for a regulatory offense is as follows:

(1) The guideline provides a low base offense level (6) aimed at the first type of recordkeeping or reporting offense. It gives the court the legal authority to impose a punishment ranging from probation up to six months of imprisonment.

(2) Specific offense characteristics designed to reflect substantive offenses that do occur (in respect to some regulatory offenses), or that are likely to occur, increase the offense level.

(3) A specific offense characteristic also provides that a recordkeeping or reporting offense that conceals a substantive offense will be treated like the substantive offense.

The Commission views this structure as an initial effort. It may revise its approach in light of further experience and analysis of regulatory crimes.

*(g) Sentencing Ranges.*

In determining the appropriate sentencing ranges for each offense, the Commission began by estimating the average sentences now being served within each category. It also examined the sentence specified in congressional statutes, in the parole guidelines, and in other relevant, analogous sources. The Commission’s forthcoming detailed report will contain a comparison

between estimates of existing sentencing practices and sentences under the guidelines.

While the Commission has not considered itself bound by existing sentencing practice, it has not tried to develop an entirely new system of sentencing on the basis of theory alone. Guideline sentences in many instances will approximate existing practice, but adherence to the guidelines will help to eliminate wide disparity. For example, where a high percentage of persons now receive probation, a guideline may include one or more specific offense characteristics in an effort to distinguish those types of defendants who now receive probation from those who receive more severe sentences. In some instances, short sentences of incarceration for all offenders in a category have been substituted for a current sentencing practice of very wide variability in which some defendants receive probation while others receive several years in prison for the same offense. Moreover, inasmuch as those who currently plead guilty often receive lesser sentences, the guidelines also permit the court to impose lesser sentences on those defendants who accept responsibility and those who cooperate with the government.

The Commission has also examined its sentencing ranges in light of their likely impact upon prison population. Specific legislation, such as the new drug law and the career offender provisions of the sentencing law, require the Commission to promulgate rules that will lead to substantial prison population increases. These increases will occur irrespective of any guidelines. The guidelines themselves, insofar as they reflect policy decisions made by the Commission (rather than legislated mandatory minimum, or career offender, sentences), will lead to an increase in prison population that computer models, produced by the Commission and the Bureau of Prisons, estimate at approximately 10 percent, over a period of ten years.

*(h) The Sentencing Table.*

The Commission has established a sentencing table. For technical and practical reasons it has 43 levels. Each row in the table contains levels that overlap with the levels in the preceding and succeeding rows. By overlapping the levels, the table should discourage unnecessary litigation. Both prosecutor and defendant will realize that the difference between one level and another will not necessarily make a difference in the sentence that the judge imposes. Thus, little purpose will be served in protracted litigation trying to determine, for example, whether
