SUPPLEMENTARY INFORMATION:

Final Determination

We determine that high and ultra-high voltage ceramic station post insulators (HVSPs) from Japan are being, or are likely to be, sold in the United States at less than fair value (LFTV), as provided in section 735 of the Tariff Act of 1930, as amended (the Act). The estimated margins are shown in the “Suspension of Liquidation” section of this notice.

Background

On June 6, 2003, the Department of Commerce (the Department) issued its preliminary determination in the above-captioned antidumping investigation. See *Notice of Preliminary Determination*

of Sales at Less Than Fair Value: High and Ultra-High Voltage Ceramic Station Post Insulators from Japan, 68 FR 35627 (June 16, 2003) (*Preliminary Determination*). See also *Notice of Initiation of Antidumping Duty Investigation: High and Ultra-High Voltage Ceramic Station Post Insulators from Japan*, 68 FR 4169 (January 28, 2003) (*Initiation Notice*).

Since the preliminary determination, the following events have occurred. We gave interested parties an opportunity to comment on the preliminary determination. No case or rebuttal briefs were submitted. On June 20, 2003, NGK Insulators, Ltd. (NGK), the respondent, requested that the Department postpone the final determination the full sixty days as permitted by the statute and the Department's regulations. On June 23, 2003, the Department postponed the final determination until no later than 135 days after the publication of the preliminary determination in the **Federal Register**. See 68 FR 39897 (July 3, 2003).

Scope of Investigation

The scope of this investigation covers station post insulators manufactured of porcelain, of standard strength, high strength, or extra-high strength,¹ solid

¹ Station post insulators are manufactured in various styles and sizes, and are classified primarily according to the voltage they are designed to withstand. Under the governing industry standard issued by the Institute of Electrical and Electronic Engineers, the voltage spectrum is divided into three broad classes: “medium” voltage (i.e., less than or equal to 69 kilovolts), “high” voltage (i.e., from 115 to 230 kilovolts), and “extra-high” or
