

trout whirling disease were discovered in Yellowstone Lake threatening the existence of the rare, endemic Yellowstone cutthroat trout, plus 42 other native birds and mammals that depend on cutthroats for their own survival. It could also potentially destroy a sport fishery that had a \$36 million annual value.

Outcome: Experts on both fish species concluded that the risk of functional extinction of the native trout was real and substantial, but that no technology exists to eradicate lake trout from the lake nor treat or control the trout disease. In the near future, the best that could be hoped for was long-term suppression of lake trout, through the deployment of "industrial strength gillnets," to restore the declining cutthroat trout population. This was implemented by NPS beginning in 1995 targeting the estimated 7,000 reproducing adult lake trout extant that year. In addition, a no-limit, no-live-release regulation for lake trout with sport anglers was also put into effect and continues to date. Considerable research and monitoring continues on the whirling disease dilemma.

Status: Gillnet fishing effort has increased each year and has resulted in the destruction of approximately 56,000 adult and juvenile lake trout. Catch-per-unit-effort declined in 2002, and again in 2003, and for the first time gave biologists hope exploitation was beginning to affect the population. Sport angling for lake trout has been actively promoted and the angler catch has represented a helpful 20 percent of the total harvest. Research continues to seek tools for combating whirling disease.

Water Quality Issues

Threats in 1995: Yellowstone National Park hosts almost five million visitor use days annually. Old, outdated waste treatment plants, lift stations, and underground lines, and older single wall fuel tanks were causing an unacceptable level of accidental overflows, ruptures, and spills affecting soils, ground and surface waters degrading localized wild lands. In 1995, the failing Norris wastewater treatment plant was closed after recommendations of the U.S. Public Health Service.

Outcome: All of the park's fuel storage tanks have been replaced with new double-walled liquid tanks or replaced with more environmentally friendly propane gas tanks. Congress appropriated monies to replace the Old Faithful, Madison, and Norris sewage treatment plants and those projects are underway or completed. Older or problematic lift stations, lines, grease traps have been replaced at many locations in the park. Yellowstone is a leader in sustainability through its "Greening of Yellowstone" program, which is identifying ways to accomplish its work at less cost and with fewer environmental impacts. A regional compost facility was opened in 2003, for example, and is tangible evidence of the effectiveness of the "Greening" initiative. In addition, the use of biodiesel and ethanol has been an increasing part of park transportation, which has a positive benefit on both air and water.

Status: Yellowstone has made excellent progress addressing threats to water quality

and believes that scheduled programs are in place and will continue to resolve the smaller scale projects remaining to be upgraded.

Road Impacts

Threats in 1995: Yellowstone's road system was never designed for the volume, size, and weight of vehicles that travel through the park today. The park maintains 466 miles of roads of which 310 are paved and considered primary roads for the public. The remaining 156 miles are paved or gravel secondary roads for service and/or light public use. The condition of the road system in 1995 was considered deplorable.

Outcome: Yellowstone has an integrated, methodical and long-term program to improve the condition of the park's roads and lessen unsafe conditions and unsatisfactory experiences for visitors and prevention of resource degradation. An annual funded program of complete road bed and/or surface replacement is expected to continue through 2017.

Status: Much has been accomplished upgrading the existing road system since 1995, but it is a slow process because of the short construction season and the reality that reconstruction must be reasonably compatible with summer visitors. As noted above, the current program will be carried out annually through the year 2017, which should largely correct the structural deficiencies. In 2003, Yellowstone issued its Business Plan; its statement of operational needs for the next five years. In that plan, deficiencies in road cyclical maintenance are articulated and would keep those new roads in top, non-deteriorating condition. All federal programs, such as road maintenance, are subject to federal appropriations.

Visitor Use Impacts

Threats in 1995: Increasing visitor pressures on the natural and cultural resources of the park have been of concern to managers for many years. More recently, the quality of a visitor's Yellowstone experience in terms of sights, sounds and smells has also been extensively debated. Concerns have been raised most strongly regarding winter use in the park, but the crowds of summer are also a concern to many people. The numbers of visitors in the park, whether summer or winter, is a contentious subject with the U.S. public.

Outcome: The completion of an EIS on a new winter use management plan and a Record of Decision in 2000, called for protecting visitor safety and enjoyment, air quality, wildlife, and the natural quiet of Yellowstone by phasing out snowmobile use over a three year period, and replacing them with non-polluting, mass transit snow coaches. The decision was challenged in federal court. A subsequent lawsuit settlement stipulated the NPS would prepare a supplemental EIS (SEIS) analyzing the snowmobile ban and various alternatives to the ban. The draft SEIS was released to the public in 2002 and generated over 350,000 public comments. The final SEIS was released in February 2003, and a Record of Decision signed on March 25, 2003, which approved the new winter use plan. The NPS decision allows for continued snowmobile

use under strict limitations, establishing daily use limits, requiring the use of the cleaner and quieter, 4-stroke engines, and requiring snowmobile parties to be guided.

Status: The NPS believes the decision addresses winter use related issues and the park's goals of protecting park resources, protecting employee and visitor health and safety, and improving the quality of the visitor experience. Litigation has been initiated regarding the Record of Decision and new management plan but the park intends to implement the plan in December 2003. Summer, fall and spring visitation has been consistently below the high level experienced in 1995. The park has focused on development of partnerships that have encouraged use of alternate fuels for transportation and facilities. These partnerships will help the park and communities foster a region-wide approach to providing visitors and voluntary alternative modes of transportation.

C. Public Comment Solicitation

Persons wishing to comment may do so by any one of several methods. They may mail comments to Suzanne Lewis, Superintendent, Yellowstone National Park, P.O. Box 168, Yellowstone National Park, WY 82190-0168. They also may comment via e-mail to yell_world_heritage@nps.gov (include name and return address in the e-mail message). Finally, they may hand-deliver comments to park headquarters in Mammoth Hot Springs, Wyoming, 82190.

The NPS practice is to make comments, including names and home addresses of respondents, available for public review during regular business hours. Individual respondents may request we withhold their home address from the record, which we will honor to the extent allowable by law. There also may be circumstances in which we would withhold from the record a respondent's identify, as allowable by law. If you wish us to withhold your name and/or address, you must state this prominently at the beginning of your comment. However, we will not consider anonymous comments. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, available for public inspection in their entirety.

A. Durand Jones,

Deputy Director.
