

Interior's Bureau of Indian Affairs (BIA), Bureau of Land Management (BLM), and National Park Service (NPS). These counterpart regulations, authorized in general at 50 CFR 402.04, provide an optional alternative to the existing section 7 consultation process described in 50 CFR part 402, subparts A and B. The counterpart regulations complement the general consultation regulations in part 402 by providing an alternative process for completing section 7 consultation for agency projects that authorize, fund, or carry out actions that support the NFP. The alternative consultation process contained in these counterpart regulations eliminates the need to conduct informal consultation and eliminates the requirement to obtain written concurrence from the Service for those NFP actions that the Action Agency determines are "not likely to adversely affect" (NLAA) any listed species or designated critical habitat.

DATES: This rule is effective on January 7, 2004.

ADDRESSES: The complete file for this rule is available for inspection, by appointment, during normal business hours at the Division of Consultation, Habitat Conservation Planning, Recovery and State Grants, U.S. Fish and Wildlife Service, 4401 North Fairfax Drive, Room 420, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Patrick Leonard, Chief, Division of Consultation, Habitat Conservation Planning, Recovery and State Grants, at the above address (Telephone 703/358-2171, Facsimile 703/358-1735) or Phil Williams, Chief, Endangered Species Division, NMFS, 1315 East-West Highway, Silver Spring, MD 20910 (301/713-1401; facsimile 301/713-0376).

SUPPLEMENTARY INFORMATION:

Background

Implementation of National Fire Plan

In response to several years of catastrophic wildland fires throughout the United States culminating in the particularly severe fire season in 2000, when over 6.5 million acres of wildland areas burned, President Clinton directed the Departments of the Interior and Agriculture to develop a report outlining a new approach to managing wildland fires and restoring fire-adapted ecosystems. The report, entitled *Managing the Impact of Wildfires on Communities and the Environment*, was issued September 8, 2000. This report set forth ways to reduce the impacts of fires on rural communities, a short-term plan for rehabilitation of fire-damaged

ecosystems, and ways to limit the introduction of invasive species and address natural restoration processes. The report, and the accompanying budget requests, strategies, plans, and direction, have become known as the NFP. The NFP is intended to reduce risk to communities and natural resources from wildland fires through rehabilitation, restoration and maintenance of fire-adapted ecosystems, and by the reduction of accumulated fuels or highly combustible fuels on forests, woodlands, grasslands, and rangelands.

In August 2002, during another severe wildland fire season in which over 7.1 million acres of wildlands burned, President Bush announced the Healthy Forests Initiative. The initiative was intended to accelerate implementation of the fuels reduction and ecosystem restoration goals of the NFP in order to minimize the damage caused by catastrophic wildfires by reducing unnecessary regulatory obstacles that have at times delayed and frustrated active land management activities. Because of nearly a century of policies to exclude fire from performing its historical role in shaping plant communities, fires in our public forests and rangelands now threaten people, communities, and natural resources in ways never before seen in our Nation's history.

Many of the Nation's forests and rangelands have become unnaturally dense as a result of past fire suppression policies. Today's forests contain previously unrecorded levels of fuels, while highly flammable invasive species now pervade many rangelands. As a result, ecosystem health has suffered significantly across much of the Nation. When coupled with seasonal droughts, these unhealthy forests and rangelands, overloaded with fuels, are vulnerable to unnaturally severe wildland fires. The geographic scope of the problem is enormous, with estimates approaching 200 million acres of forest and rangeland at risk of catastrophic fire. The problem has been building across the landscape for decades. Its sheer size makes it impossible to treat all the acres needing attention in a few years or even within the next decade.

In 2002 alone, the Nation experienced over 88,000 wildland fires that cost the Federal Government \$1.6 billion to suppress. Many of these wildfires significantly impacted threatened or endangered species. The Biscuit Fire burned an area of 499,570 acres in Oregon and California that included 49 nest sites and 50,000 acres of designated critical habitat for the threatened northern spotted owl, and 14 nesting

areas and 96,000 acres of designated critical habitat for the threatened marbled murrelet. The estimated fire suppression cost was \$134,924,847. The Rodeo-Chediski fire in Arizona, the largest fire in the State's post-settlement history, burned through 462,614 acres, including 20 nesting areas for the threatened Mexican spotted owl. Unless fuel loads can be reduced on the thousands of acres classified at high risk of catastrophic wildfires, more adverse effects like those of the 2002 fire season are certain to occur.

The long-term strategy for the NFP is to correct problems associated with the disruption of natural fire cycles as a result of fire suppression policy or the presence of fire-prone non-native invasive species and to minimize risks to public safety and private property due to the increase in amount and complexity of the urban/wildland interface. The NFP calls for a substantial increase in the number of acres treated annually to reduce unnaturally high fuel levels, which will decrease the risks to communities and to the environment caused by unplanned and unwanted wildland fire. These types of preventative actions will help ensure public safety and fulfill the goals of the President's Healthy Forests Initiative.

The FS, BIA, BLM, and NPS, as Federal land management agencies, play an important role in implementing actions under the NFP that will reduce the potential risks of catastrophic wildland fire. The FWS also develops and carries out actions in support of the NFP on National Wildlife Refuges or National Fish Hatcheries. These five agencies constitute the Action Agencies who may use the counterpart regulations contained herein. The types of projects being conducted by these agencies under the NFP include prescribed fire (including naturally occurring wildland fires managed to benefit resources), mechanical fuels treatments (thinning and removal of fuels to prescribed objectives), emergency stabilization, burned area rehabilitation, road maintenance and operation activities, ecosystem restoration, and culvert replacement actions. Prompt implementation of these types of actions will substantially improve the condition of the Nation's forests and rangelands and substantially diminish potential losses of human lives and property caused by wildland fires. The Service and the Action Agencies are adopting these counterpart regulations to accelerate the rate at which these types of activities can be implemented so that the likelihood of catastrophic wildland fires is reduced.
