Small businesses may request information on complying with this regulation, or obtain a guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders by contacting Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1400 Independence Avenue, SW STOP 0237, Washington, DC 20250-0237; telephone: (202) 720-2491, Fax: (202) 720-8938, or E-mail: Jay.Guerber@usda.gov.

SUPPLEMENTARY INFORMATION: This proposal is issued under Marketing Agreement and Order No. 930 (7 CFR part 930), regulating the handling of tart cherries produced in the States of Michigan, New York, Pennsylvania, Oregon, Utah, Washington, and Wisconsin, hereinafter referred to as the "order." The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), hereinafter referred to as the "Act."

The Department of Agriculture (Department) is issuing this rule in conformance with Executive Order 12866.

This proposal has been reviewed under Executive Order 12988, Civil Justice Reform. Under the marketing order provisions now in effect, final free and restricted percentages may be established for tart cherries handled by handlers during the crop year. This rule would establish final free and restricted percentages for tart cherries for the 2003-2004 crop year, beginning July 1, 2003, through June 30, 2004. This rule would not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under § 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempt therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in

which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

The order prescribes procedures for computing an optimum supply and preliminary and final percentages that establish the amount of tart cherries that can be marketed throughout the season. The regulations apply to all handlers of tart cherries that are in the regulated districts. Tart cherries in the free percentage category may be shipped immediately to any market, while restricted percentage tart cherries must be held by handlers in a primary or secondary reserve, or be diverted in accordance with § 930.59 of the order and § 930.159 of the regulations, or used for exempt purposes (and obtaining diversion credit) under § 930.62 of the order and § 930.162 of the regulations. The regulated Districts for this season are: District one—Northern Michigan; District two—Central Michigan; District three—Southwest Michigan; District seven—Utah; District eight—Washington and District nine—Wisconsin. Districts four, five, and six (New York, Oregon, and Pennsylvania, respectively) would not be regulated for the 2003-2004 season.

The order prescribes under § 930.52 that those districts to be regulated shall be those districts in which the average annual production of cherries over the prior three years has exceeded six million pounds. A district not meeting the six million-pound requirement shall not be regulated in such crop year. Because this requirement was not met in the districts of Oregon, and Pennsylvania, handlers in those districts would not be subject to volume regulation during the 2003-2004 crop year. Section 930.52 also prescribes that any district producing a crop which is less than 50 percent of the average annual processed production in that district in the previous five years would be exempt from any volume regulation if, in that year, a restricted percentage is established. Because New York's production is less than 50 percent of the previous 5-year production average, handlers in New York also would not be subject to volume regulation during the 2003-2004 crop year.

Demand for tart cherries at the farm level is derived from the demand for tart cherry products at retail. Demand for tart cherries and tart cherry products tends to be relatively stable from year to year. The supply of tart cherries, by contrast, varies greatly from crop year to crop year. The magnitude of annual

fluctuations in tart cherry supplies is one of the most pronounced for any agricultural commodity in the United States. In addition, since tart cherries are processed either into cans or frozen, they can be stored and carried over from crop year to crop year. This creates substantial coordination and marketing problems. The supply and demand for tart cherries is rarely balanced. The primary purpose of setting free and restricted percentages is to balance supply with demand and reduce large surpluses that may occur.

Section 930.50(a) of the order describes procedures for computing an optimum supply for each crop year. The Board must meet on or about July 1 of each crop year, to review sales data, inventory data, current crop forecasts and market conditions. The optimum supply volume shall be calculated as 100 percent of the average sales of the prior three years to which is added a desirable carryout inventory not to exceed 20 million pounds or such other amount as may be established with the approval of the Secretary. The optimum supply represents the desirable volume of tart cherries that should be available for sale in the coming crop year.

The order also provides that on or about July 1 of each crop year, the Board is required to establish preliminary free and restricted percentages. These percentages are computed by deducting the actual carryin inventory from the optimum supply figure (adjusted to raw product equivalent—the actual weight of cherries handled to process into cherry products) and subtracting that figure from the current year's USDA crop forecast. If the resulting number is positive, this represents the estimated over-production, which would be the restricted percentage tonnage. The restricted percentage tonnage is then divided by the sum of the USDA crop forecast or by an average of such other crop estimates for the regulated districts to obtain percentages for the regulated districts. The Board is required to establish a preliminary restricted percentage equal to the quotient, rounded to the nearest whole number, with the complement being the preliminary free tonnage percentage. If the tonnage requirements for the year are more than the USDA crop forecast, the Board is required to establish a preliminary free tonnage percentage of 100 percent and a preliminary restricted percentage of zero. The Board is required to announce the preliminary percentages in accordance with paragraph (h) of § 930.50.

The Board met on June 26, 2003, and computed, for the 2003-2004 crop year, an optimum supply of 180 million
