

medical care services in the United States. Ambulatory services are rendered in a wide variety of settings, including physicians' offices and hospital outpatient and emergency departments. The NAMCS target population consists of all office visits made by ambulatory patients to non-Federal office-based physicians (excluding those in the specialties of anesthesiology, radiology, and pathology) who are engaged in direct patient care. To complement these data, NCHS initiated the National Hospital Ambulatory Medical Care Survey (NHAMCS, OMB No. 0920-0278) to provide data concerning patient visits to

hospital outpatient and emergency departments.

The NAMCS provides a range of baseline data on the characteristics of the users and providers of ambulatory medical care. Data collected include the patients' demographic characteristics, reason(s) for visit, physicians' diagnosis, diagnostic services, medications and visit disposition. In addition to the annual statistics normally collected, a key focus of the 2005–2006 survey will be on the prevention and treatment of selected chronic conditions. These data, together with trend data, may be used to monitor the effects of change in the health care system, provide new insights into ambulatory medical care,

and stimulate further research on the use, organization, and delivery of ambulatory care.

Users of NAMCS data include, but are not limited to, congressional and other federal government agencies, state and local governments, medical schools, schools of public health, researchers, administrators, and health planners. NAMCS plans to extend its data collection into 2005 and 2006. To calculate the burden hours the number of respondents for NAMCS is based on a sample of 3,000 physicians with a 50 percent participation rate (this includes physicians who are out-of-scope as well as those who refuse). There is no cost to respondents.

Respondents	Number of respondents	Number of responses/respondent	Average burden/response (in hrs)	Total burden hours
Office-based physicians:				
Induction Form	1,500	1	25/60	625
Patient Record Form	1,500	30	5/60	3,750
Total	4,375

Dated: December 19, 2003.

Ron Ergle,

Acting Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498–1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395–6974. Written comments should be received within 30 days of this notice.

Proposed Project: Housing and Health Study—New—National Center for HIV, STD, and TB Prevention (NCHSTP), Centers for Disease Control and Prevention (CDC). CDC is requesting OMB approval to conduct a study to examine the impact of providing housing for homeless or unstably housed people (people who are in temporary housing programs or doubled up with others) while living with HIV.

This project includes a unique collaboration with the Department of Housing and Urban Development (HUD). HUD is providing funding for housing vouchers for study participants. CDC will use the results of the data collection to inform policy makers about the types of housing and other affiliated services most likely to reduce HIV transmission and disease progression in the homeless population.

The population to be studied will be drawn from persons living with HIV/AIDS who are seeking housing services from three communities with unmet housing needs. These needs are evidenced by a waiting list for services, or other evidence of unmet housing need through the Housing Opportunities for Persons with AIDS (HOPWA) program. The project will be a longitudinal cohort study, following participants for 18 months. Participants will be randomized into two groups. One group will receive vouchers for

housing subsidies plus a 2-session behavioral intervention; the other group will receive referral to housing resources through participating agencies and other agencies plus the 2-session behavioral intervention. No study participants will be denied access to other housing services that are available through participating agencies or other community resources.

Since, all participants receive the behavioral intervention, the study technically assesses the effects of housing over and above the behavioral intervention. A cost study will also be conducted to determine the resources needed for this approach and the cost benefits of providing housing for homeless and unstably housed people living with HIV. The purpose of the cost study is to evaluate the effects of housing affordability and the cost-effectiveness (*i.e.* cost-utility ratio) of this strategy relative to other interventions in other public health and other HIV prevention interventions.

Study participants will be surveyed at the beginning of the project (baseline) and at 6, 12, and 18 months after baseline. HUD site service providers will also be surveyed. Blood samples for CD4 and viral load counts will also be collected for all participants. The annualized burden for this data collection is 6,030 hours.
