

invasion of California since early 1998 and determined that, under the authority of NANPCA, the development of a cooperative and comprehensive management plan for the genus *Eriocheir* was appropriate and necessary. The U.S. Fish and Wildlife Service supported a literature search and summary, organized a public meeting and workshop, and developed a report in 1999 to the ANS Task Force entitled "The Chinese Mitten Crab Invasion of California: A Draft Management Plan for the Genus *Eriocheir*." In 2001 the ANS Task Force developed a Mitten Crab Control Working Group (under the authority of NANPCA) and charged the committee with the task to review and edit the draft plan. The committee submitted a revised version of the draft plan to the ANS Task Force for review and approval in 2002.

The purpose of the draft management plan is to assist the ANS Task Force and other interested parties with a determination of appropriate responses to the Chinese mitten crab invasion of the San Francisco Bay and estuary, as well as the threat to other estuaries. The plan addresses the information and initial recommendations as well as the opinions of committee members regarding priorities for implementation of management actions. Currently, there is not enough information about this crab to implement many management actions with a high degree of confidence; therefore, a vital component of this program is adaptive management. As implementation moves forward, results of new findings will be incorporated into future planning. Continual integration of findings will require flexibility in adoption of many program components, but it will greatly enhance the success of the program by allowing decisions to be based on more complete scientific information.

The goal of the draft National Plan is to prevent or delay the introduction and spread of *Eriocheir* species to new areas and reduce the negative impacts of existing populations.

The draft plan has identified the following four primary objectives: (1) Preventing introductions and spread; (2) detecting new populations and monitoring existing populations; (3) reducing negative impacts; and (4) developing strategies and methods for population control and management. Elements of research, outreach and management pertain to each of these objectives.

The draft plan has outlined actions not only to minimize further impacts in California, but to also prevent invasions in other ecosystems. Due to reports of

crab sightings and the susceptibility of these regions, the Columbia River, Mississippi River, Hudson River, and St. Lawrence River are considered areas that may soon face the same type of invasion that San Francisco Bay has experienced. Without the implementation of proactive efforts to prevent new introductions and spread from California, control and management activities will likely be required in numerous locations throughout the country in the future, making management efforts even more complex and expensive. Importantly, while immediate actions are warranted in the draft plan, additional biological information is also needed to allow development of a theoretically based management plan that will allow us to minimize negative impacts on the very resources we hope to protect.

The draft National Management Plan for the Genus *Eriocheir* is available on the ANS Task Force Web site (<http://www.anstaskforce.gov>) You may also request copies of the draft plan by calling or writing the person listed under **FOR FURTHER INFORMATION CONTACT**.

Dated: January 21, 2003.

Everett Wilson,

Acting Co-Chair, Aquatic Nuisance Species Task Force, Assistant Director—Fisheries and Habitat Conservation.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Endangered and Threatened Wildlife and Plants; 12-Month Finding for a Petition To List the California Spotted Owl (*Strix occidentalis occidentalis*)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of 12-month petition finding.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce a 12-month finding for a petition to list the California spotted owl (*Strix occidentalis occidentalis*) under the Endangered Species Act of 1973, as amended. After reviewing the best available scientific and commercial information available, we find that the petitioned action is not warranted. We continue to ask the public to submit to us any new information that becomes available concerning the status of or threats to this species. This information will help us monitor and encourage the conservation of this species.

DATES: The finding announced in this document was made on February 7, 2003. You may submit new information concerning these species for our consideration at any time.

ADDRESSES: You may send data, information, comments, or questions concerning this finding to Field Supervisor (Attn: CASPO), Sacramento Fish and Wildlife Office, U.S. Fish and Wildlife Service, 2800 Cottage Way, Room W-2605, Sacramento, California 95825. You may inspect the petition, administrative finding, supporting information, and comments received, by appointment, during normal business hours, at the above address.

FOR FURTHER INFORMATION CONTACT: Susan Moore or Ken Sanchez at the above address (telephone at 916/414-6600; facsimile at 916/414-6710).

SUPPLEMENTARY INFORMATION:

Background

Section 4(b)(3)(B) of the Endangered Species Act of 1973, as amended (Act) (16 U.S.C. 1531 *et seq.*), requires that, for any petition to revise the List of Threatened and Endangered Species that presented substantial scientific or commercial information that listing may be warranted, we make a finding within 12 months of receiving the petition on whether the petitioned action is: (a) Not warranted, (b) warranted, or (c) warranted but precluded by other pending proposals. Such 12-month findings are to be published promptly in the **Federal Register**.

On April 3, 2000, we received a petition dated April 2000, from the Center for Biological Diversity, Tucson, Arizona, and Sierra Nevada Forest Protection Campaign, Sacramento, California, and other organizations to list as threatened or endangered the California spotted owl (*Strix occidentalis occidentalis*). The names, addresses, and signatures of representatives of these organizations followed in a letter dated April 17, 2000. These organizations filed the petition on behalf of themselves and 14 other organizations and requested that we designate critical habitat for the California spotted owl concurrent with listing. Further, they requested emergency listing and emergency designation of critical habitat. Although emergency listing and designation of critical habitat are not petitionable actions under the Act, we determined that an emergency situation did not exist.

On October 12, 2000, we published a 90-day finding on that petition in the **Federal Register** (65 FR 60605). In that publication we found that the petition
