I. Introduction

In a notice published in the **Federal Register** of April 25, 2002 (67 FR 20533), FDA announced that a food additive petition (FAP 2A4734) had been filed by The Minute Maid Co., c/o King and Spalding, 1700 Pennsylvania Ave. NW., Washington, DC 20006. The petition proposed that the food additive regulations be amended in 21 CFR part 172 to provide for the safe use of vitamin D₃ in calcium-fortified fruit juices and juice drinks at levels not to exceed 100 IU per RACC¹.

Vitamin D² is affirmed as generally recognized as safe (GRAS) in § 184.1950(c)(1) (21 CFR 184.1950(c)(1)), in accordance with 21 CFR 184.1(b)(2), for use as a nutrient supplement, as defined in 21 CFR 170.3(o)(20), as the sole source of added Vitamin D in foods within the limitations specified in the following table:

¹RACC values represent the amount of food typically consumed per eating occasion. The RACC for fruit juices and juice drinks intended for the general population is 240 milliliters (mL) (21 CFR 101.12).

²Vitamin D comprises a group of fat soluble secosterols and comes in many forms. The two major physiologically relevant forms are vitamin D₂ and vitamin D₃. Vitamin D without a subscript represents either D₂ or D₃. As used in § 184.1950, the meaning of the term vitamin D includes crystalline vitamin D₂, crystalline vitamin D₃ and vitamin D₂ resin, and vitamin D₃ resin.
