

erroneously as commercial landings, as follows: Connecticut—19 lb (9 kg); Rhode Island—98 lb (44 kg); and New York—200 lb (91 kg). This amount is a negligible fraction of reported 2002 landings and did not result in closure of any state's fishery. However, for these states, corrections have been made to the 2002 landings and the 2003 quotas are revised as appropriate.

In addition, the following states recorded 2002 landings of summer flounder less than those reported in the January 2, 2003, final rule, by the

following amounts: New Hampshire—22 lb (10 kg); Rhode Island—337,187 lb (152,947 kg); Connecticut—42,056 lb (19,076 kg); New York—10,918 lb (4,952 kg); New Jersey—198,749 lb (90,152 kg); Maryland—15,385 lb (6,979 kg); Virginia—820,494 lb (372,174 kg); and North Carolina—846,527 (383,982 kg). Revisions to these landings have been made and revisions of 2002 overages (through October 31, 2002) are necessary for Rhode Island, Connecticut, and Virginia. The result is that the initial quotas (less the amount

set aside for 2003 research) are restored for Connecticut, Rhode Island, and Virginia, as there was no 2002 overage in those states.

The commercial summer flounder 2003 adjusted quotas, less the amount set aside for 2003 research (as published in the January 2, 2003, final rule), the amounts being restored to the 2003 adjusted quotas, and the revised 2003 quotas (less the amount set aside for 2003 research), by state, are presented in Table 1.

¹ Amount restored was calculated to correct for 2002 RSA landings counted as commercial landings, misattributed portion of late 2001 landings, and specifically for Connecticut, trip level data already summarized in monthly landings data reports.

² Parentheses indicate a negative number. A state with a negative quota has an allocation of zero (0). Maine and Delaware continue repayment of overharvest from 2001.

³ Kilograms are as converted from pounds and may not necessarily add due to rounding.

⁴ Total quota is the sum of all states having allocation; i.e., states other than Maine and Delaware.

Scup Quota Corrections

No RSA landings of scup were made during the Winter I period of 2002. A total of 87,188 lb (39,548 kg) of scup landed under the RSA program during the Summer period of 2002 were counted erroneously as commercial landings. The 2002 Summer period overage reported in the January 2, 2003, final rule was 402,754 lb (182,688 kg), and the 2003 Summer period quota was

adjusted to 4,434,691 lb (2,011,563 kg) as a result of that overage. Properly accounting for the RSA landings, the overage should be corrected to 315,566 lb (143,140 kg), resulting in a revised 2003 summer period quota of 4,521,879 lb (2,051,111 kg; a 1.9-percent increase). Per the quota counting procedures, any adjustment to the 2002 Winter II period quota will be made, if necessary, following review of the landings from November 1 through December 31,

2002, to be conducted as soon as possible after June 30, 2003.

The commercial scup 2003 adjusted quotas, less the amount set aside for 2003 research (as published in the January 2, 2003, final rule), the amounts being restored to the 2003 adjusted quotas, and the revised 2003 quotas (less the amount set aside for 2003 research), by period, are presented in Table 2.
