

Enigmail Installation

The latest version of Enigmail is 0.90.0, working with Thunderbird 1.0, Mozilla 1.7.x, and Netscape 7.2.

Note: You must first read [install-gpg.doc](#) before installing Enigmail.

First you will need to go download [Mozilla Thunderbird](#), or the MailNews components of [Mozilla 1.x](#) or [Netscape 7.x](#)

Please follow the installation documentation for the product you choose to use. Once one of the above listed clients are installed you will need to go [Download Enigmail](#).

To install Enigmail, select *Tools > Extensions > Install* and browse for the previously saved XPI file(s) and install them. Then shutdown and re-start Thunderbird to make (the localised) Enigmail available.

For the latest configuration methods for enigmail please visit <http://enigmail.mozdev.org/configure.html>
