

## [1.2] TI-92 Plus manual error for Logistic regression equation

On page 150 of the TI92+ manual, the logistic equation is shown correctly as

$$y = a/(1 + b*e^{(c*x)}) + d \quad \text{[right!]}$$

However, on p236, the equation is given incorrectly as

$$y = c/(1+a*e^{(-bx)}) \quad \text{[wrong!]}$$

This has been corrected in the new combined manual for the TI-89 and TI-92 Plus.
