Assembly Control Board Request

Name of Program(s): Luminar 1D
Originator: W. Eng.
Organization: WA/7I/W
Date: 11/25/69

Description of Change:

Change the coding in SPEE'RUN (during SERVICE) to compute FORWARD and FORVER regardless of position of MODE SELECT switch. - addition of six words.

Reason:
The FORWARD VELOCITY (FORVER) is not computed for display on X pointer or for printed if the MODE SELECT (which controls which system will display on the X pointer or tape) switch is in any position but GNGTS.

Assigned to: W. Bernikovich

Comments:

```
spee'run
  if [DIREC]:
    set DIRECTION = 1
  else:
    compute FORVER
```
