Assembly Control Board Request

No. L-13

Name of Program(s): Luminex

Originator: Rye

Organization: MIT/IL

Date: 12/30/89

Description of Change: Create subroutine ERESVAC
to release VAC area and change a THREVC
from VAC area to a NOVAC job. Perform this before
writing a Cyclic display at end
of guidance.

Reason:
To keep displays in timing and correct
from tying up a VAC area if DRSV is doing
the same of elimination a cocker unit.

Assigned to: Rye

Comments: for luminex 10
